github.com/abmarnie

I'm a full-stack Software Engineer with experience in frontend and backend development. I specialize in building scalable solutions, optimizing performance, and leading complex projects across various industries using modern web technologies.

WORK EXPERIENCE

Software Developer

Jul 2024 - Feb 2025

Visual Dev Pro

San Antonio, TX

- Worked in an Agile team to develop a full-stack CRM webapp using ASP.NET + Angular + SQL Server to replace a legacy system used by the sales team of a \$100 million+ annual revenue hardware distributor.
- Collaborated with third parties to resolve API discrepancies, allowing for integration with new payment processors.
- Developed an internal system using React, Django, and PostgreSQL, enhancing operational efficiency by 30%.

Full stack developer

Feb 2021 - Jun 2024

Freelance Developer & Consultant

San Antonio, TX

- Architected and implemented robust server-side solutions using Express, and Node.js, improving system performance by 30%.
- Optimized backend systems written in Python and C++, resulting in increased performance and reliability by 25%.
- Developed front-end code using React, Vue, Tailwind CSS, and jQuery to create a responsive web application that improved user engagement metrics by 30%.
- Developed UI/UX, game logic, and save system backend as part of an interdisciplinary team for cross-platform videogame Arctic Eggs, achieving 50,000+ wishlists and 12,000+ unit sales in the 1st week. Recognized by numerous gaming media outlets, and current "Best Self-Published Indie Game" nominee for 2024 Golden Joystick Awards.

Research Engineer (Intern/Co-op)

Jun 2018 - May 2020

U.S. Army Corps of Engineers

Vicksburg, MS

- Researched, implemented, tested (V&V), and documented state-of-the-art numerical time-stepping schemes in the C programming language for the Adaptive Hydraulics Model System, a large-scale 3D Finite Element based CFD solver.
- Implemented and tested state-of-the-art algorithms for building data-driven hydrology models in Python (including visualizations) using libraries such as NumPy, pandas, SciPy, and Matplotlib.
- Utilized Red Hat Linux and bash scripting skills for regular tasks such as Cray XC40 supercomputer job submission.

PROJECTS

Game development software projects

Technical Lead for competitive game development software projects Rabbit Grab ([source](#)), Dolphin Forces ([source](#)), and Beebo Attempt's Magic, for Easter Jam 2024, Global Jam 2024, and GMTK 2022 Jam respectively

Internal C# automation tool

Software Developer for internal C# automation tool Batch Lightweight Icon Generator and an onboarding guide for Version Control + Unity, showcasing ability to empower team by solving process inefficiencies.

National Science Foundation LSAMP project

Research Engineer Intern (funded) for Virginia Tech MAOP Summer Research Internship Program project on Finite Element Methods for Nondestructive Testing, resulting in my admittance into graduate school at Virginia Tech

Proxy Management Site

Developed a proxy management site using Vue.js for the frontend, Express.js for the backend, and PostgreSQL for the database. Integrated XProxy and Proxysmart services to manage proxy servers, allowing users to purchase, configure, and manage proxy subscriptions.

EDUCATION

Jan 2017 - May 2020

Virginia Tech

Led 800+ students over the course of 3 semesters in Excel-based labs for Business Calculus I & II.
Developed 20+ finance & business oriented math assignments in collaboration with professors and staff.

B.S. in Mathematics

May 2012 - Dec 2016

Texas A&M University-Corpus Christi

Graduated Summa Cum Laude with a B.S. in Mathematics and minor in Geology.
Minor in Geology Awarded "Outstanding Undergraduate Mathematics Major 2016" by faculty.

SKILLS

Languages: C#, SQL, Javascript, TypeScript, C, C++, Python, Julia, MATLAB

Backend: ASP.NET, Django, Node.js/Express.js, FastAPI

Frontend: React, Angular, Vue, Next.js

Database: PostgreSQL, MongoDB, MySQL, MS-SQL

API Knowledge: REST, GraphQL, tRPC

Others: Unity, Version Control (Git + LFS, SVN), CI/CD (GitHub Actions, Docker)
