Summary

I am a highly self-motivated and results-driven certified technology professional with more than 11 years of experience, specializing in data engineering, cloud platforms, machine learning, and technology consulting across various industries. My unique skill set allows me to identify issues and areas for improvement, gather requirements, conduct gap and root cause analyses, and develop and implement long-term solutions that turn executives' visions into reality.

My track record of performance excellence is evident in my ability to identify duplicative services and functions, capture new improvement opportunities, establish best-in-class processes, drive operational innovations, eliminate redundant processes, functions, and services, and engage teams. Throughout my career, I have maintained a keen focus on these critical aspects of data engineering, machine learning, and cloud platforms.

Skills

Languages: Python, Javascript, Typescript, HTML, CSS, PHP, C#, NodeJs, C, C++

Frameworks: Django, Flask, ReactJs, Redux, NextJs, VueJs, Vuex, NuxtJs, Angular, ExpressJs, NestJs, jQuery, GraphQL, RESTful APIs, JSON

Database: MongoDB, DynamoDB, MySQL, PostgreSQL, RDS

Tools: Docker, Jira, Webpack, NPM, PNPM, Github, Gitlab, Bitbucket, Trello, ClickUp, Notion, Figma, VS Code, Jest, Mocha, Cypress, StoryBook

AI: OpenAI, LLM, NLP, AI Driven Recommendation

Others: AWS, GCP, Azure, Ansible, Terraform, CI/CD, GTM, Agile/Scrum Methodology, SQL Alchemy, Hibernate, Unit Testing, Responsive Design & Mobile-First Websites, WordPress, Headless CMS, Shopify, Contentful, StoryBlock, SEO, Debugging, OOP, Project Management, Time Management, Multitasking, Teamwork, Detail-Oriented, Analytical Skills, Creative Thinking, Problem-Solving, Excellent Communication & Documentation Skills, Linux, DBT, Jinja

Professional Experience

Senior Software Engineer, *Microsoft*

2021 - 2025

- Developed a platform similar to ChatGPT, incorporating Large Language Models (LLM) and utilizing the OpenAI API to provide intelligent responses. Ensured a clean and intuitive user interface for optimal user experience.
- Created a RESTful API using Python and Django, allowing smooth integration with third-party services and real-time data updates.
- Developed real-time applications, including chat systems and live dashboards with notifications, using Node.js, React, and WebSockets for interactive user experiences.
- Developed a large-scale React application with over 1 million lines of code, serving millions of users.
- Collaborated closely with cross-functional teams, including designers and product managers, to deliver feature-rich web applications.
- Boosted website performance by 20% by improving React components and implementing Redux for better state management.
- Designed and set up a CI/CD pipeline using Azure DevOps, making the development and release process faster and reducing downtime.
- Leveraged Azure Kubernetes Service (AKS) to enhance the reliability and scalability of microservices architecture, resulting in a more resilient system.
- Implemented authentication and authorization mechanisms for user access control.
- Conducted comprehensive data analysis to optimize machine learning models, improving prediction accuracy by 15%.
- Automated data ingestion and processing pipelines using Apache Kafka and Azure Data Factory, increasing data processing efficiency by 30%.
- Spearheaded the migration of legacy systems to modern cloud-based architecture, reducing operational costs by

25%.

- Mentored junior developers, fostering a collaborative team environment and improving overall code quality and performance.
- Integrated third-party services and APIs to extend platform functionality, including payment processing and telemedicine capabilities.

Full Stack Developer, KPMG

2017 - 2021

- Developed the frontend using React/NextJs and the backend using Python/FastAPI with RESTful APIs, ensuring a robust and dynamic user experience.
- Developed robust web applications using Python's aiohttp library, leveraging asynchronous programming techniques to achieve high concurrency and responsiveness, ensuring efficient handling of HTTP requests and responses.
- Migrate a Django project for admin dashboard from Python 2.7 to Python 3.x, ensuring smooth transition and compatibility with the latest language features.
- Architected and deployed the project on GCP, utilizing GCP Cloud Run for each microservice and Google Pub/Sub for seamless communication between services.
- Implemented a microservices architecture, integrating Apollo Federation and Google Pub/Sub to connect all microservices.
- Utilized MongoDB as the primary database and Django ORM for efficient database management and data modeling.
- Integrated Redis for cron job functionality to enhance task scheduling and performance.
- Established a CI/CD pipeline and utilized Kubernetes for automated deployment and scaling of applications.
- Created and managed Google Analytics segments using Google Tag Manager to track user traffic and gather valuable insights.
- Leveraged object-oriented programming (OOP) principles to design clean and maintainable code.
- Developed and maintained robust data pipelines using DBT and Jinja, ensuring efficient data transformation and integration across multiple sources.
- Integrated ChatGPT API and large language models (LLMs) to analyze candidate responses and generate automated replies, enhancing the recruitment process.
- Scheduled and automated tasks using Cron jobs for routine maintenance and data processing.
- Utilized Pandas and NumPy libraries to manipulate and analyze large datasets, improving data processing efficiency by 30% and enabling data-driven decision-making through insightful data visualizations and statistical analysis.
- Reviewed junior engineers and peers PRs and developed unit tests for Python code using testify to ensure 100% test-coverage.
- Developed and deployed cross-platform mobile applications using React Native, delivering a consistent user experience across both iOS and Android devices.
- Reduced API response time by 25% through code optimizations and efficient database queries.
- Decreased deployment time by 50% by introducing CI/CD pipelines, resulting in faster feature delivery.
- Implemented end-to-end testing using Cypress, reducing manual testing efforts by 50% and improving test coverage.

Backend Developer, Riseapps

2014 - 2017

- Developed and maintained RESTful APIs using Python and Django framework, ensuring high performance, scalability, and security.
- Collaborated with the frontend development team to design and implement API endpoints that met MVP requirements.
- Worked on database design and optimization, including schema design, indexing, and query optimization using technologies like PostgreSQL and SQLAlchemy.
- Implemented authentication and authorization mechanisms, enhancing the security of user data and API endpoints.
- Conducted code reviews, identified bottlenecks, and optimized code for improved performance.
- Participated in Agile development processes, contributing to sprint planning, stand-up meetings, and feature development.

- Reduced API response time by 40% through code optimizations and query enhancements, resulting in a better user experience.
- Successfully implemented a new user authentication system, leading to a 20% reduction in security incidents.
- Led the development of a critical feature that increased user engagement by 15% and improved customer satisfaction.
- Designed and implemented user-friendly GUIs with Python using the Tkinter framework for internal software tools, improving operational efficiency and user experience.
- Employed Python's PyQt framework to develop and maintain custom GUI applications, leading to a 15% increase in productivity for end-users.

Intern, Rocketech

2013 - 2014

- Collaborated with a cross-functional team to develop and maintain cloud-based applications, optimizing performance and scalability through Node.js development.
- Designed and optimized APIs using GraphQL, reducing query load times and enhancing data retrieval efficiency.
- Developed and maintained dynamic web applications using Angular, ensuring high performance, responsiveness, and seamless user experiences.
- Integrated RESTful APIs and third-party libraries to enhance application functionality.
- Conducted data cleaning, preprocessing, and validation on large datasets to ensure data accuracy and integrity.
- Created and maintained interactive dashboards using tools like Tableau, providing real-time performance metrics to the marketing team.
- Assisted in the development of predictive models and data-driven reports to support marketing campaign optimization.
- Presented findings that contributed to a 10% increase in the click-through rate (CTR) of email marketing campaigns.

Education

2010 – 2014

Bachelor's Degree in Computer Science
University of Central Oklahoma
