SUMMARY

- Accomplished Senior Full Stack Developer with over 8 years of experience in designing, developing, and implementing high-performance web applications and services. Recognized for delivering scalable, secure, and innovative solutions across industries while excelling in both frontend and backend technologies.
- Proficient in a wide range of frontend technologies, including React.js, Angular, Vue, Next.js, Nuxt, and Material UI, creating dynamic, user-friendly interfaces.
- Skilled in backend development using Node.js, PHP / Laravel, Python / Django, GoLang, Ruby on Rails, Elixir, .NET (3.5 ~ 6.0), and ASP.NET, ensuring robust and efficient server-side implementations.
- Expertise in creating and optimizing RESTful APIs and integrating complex third-party services for seamless application performance.
- Demonstrated experience with microservices architecture, leveraging technologies like Spring Boot, Redis, RabbitMQ, Kafka, and Terraform for scalable solutions.
- Adept at managing databases, including MySQL, MongoDB, MS SQL, MariaDB, and Redshift, ensuring efficient data handling and retrieval.
- Comprehensive knowledge of cloud platforms such as AWS, Azure, and GCP, specializing in services like Azure APIM, AKS, Azure DevOps CI/CD, and Docker/Kubernetes orchestration.
- Extensive experience in CI/CD pipelines, utilizing tools like Jenkins and GitHub to streamline development and deployment processes.
- Proficient in implementing unit testing and performance testing with tools like NUnit, Selenium, JMeter, Gatling, and Axe, ensuring high-quality deliverables.
- Strong focus on application performance optimization and database tuning to enhance speed and reliability.
- Skilled in Blazor and Unity for creating interactive web applications and gaming solutions, extending versatility across platforms.
- Collaborative team player with strong communication skills, actively engaging in code reviews and mentoring junior developers to promote knowledge sharing and continuous improvement.
- Dedicated to continuous learning and staying updated with industry trends, contributing to academic research and presenting findings at conferences.
- Experienced in leading cross-functional collaborations to align project objectives, fostering a culture of excellence in both build and deployment processes.

SKILLS

LanguageAndFrameworks	React, Angular, Vue, Next, Nuxt, Node.js, PHP , Laravel, Python, Django, GoLang, Ruby on Rails, Elixir, .NET, .NET Core, ASP.NET, Java, Kotlin, Blazor, Unity, C#, JavaScript, TypeScript, Spring Boot
Cloud Technologies	AWS, GCP, Azure, AWS SES, AWS S3, AWS Beanstalk, Azure APIM, Azure DevOps, AKS, Azure Functions, Azure Data Factory
DataAnalysis	MariaDB, Redshift, Kafka, Redis, Tableau, Power BI
DevOps & CI/CD	Docker, Kubernetes, Terraform, Bash, CI/CD pipelines (Jenkins, GitHub Actions, Azure DevOps), CircleCI, Terraform, Puppet, Chef, Selenium, JMeter, Gatling
OperatingSystems	Linux(Red Hat,CENTOS& SUSE,Mint),Ubuntu,Solaris,DEBAIN,HP -UX, Aix-Unix,Windows
Scripting & Version Tools	Python,Shell Scripting,PowerShell, GIT,GITHUB,CVSSandBitbucket
Testing & Quality Assurance	Unit Testing, Integration Testing, End-to-End Testing, Test-Driven Development (TDD), Behavior-Driven Development (BDD), Selenium, Cypress, Postman
Security & Compliance	Identity and Access Management (IAM), OAuth, JWT, SSL/TLS, HIPAA Compliance, GDPR Compliance, Data Encryption
Database Management	SQL(MySQL, PostgreSQL, Oracle), NoSQL(MongoDB, DynamoDB, Cassandra), GraphQL, Redis, Elasticsearch, MongoDB Atlas

Other Tools	Kafka, RabbitMQ, Redpanda, Temporal SDK, Shopify, Twilio, Third-Party APIs, PayPal, Apple App Store, Google Play, Stripe, Authorize.net, Web3.js, Ethereum, Smart Contracts, NFTs, IPFS, DApp, gRPC, Decentralized Exchanges (DEX), Polygon, SQL indexing, Parallel processing, Load balancing, Data caching, Server-side rendering (SSR), Client-side rendering (CSR)
--------------------	--

PROFESSIONAL EXPERIENCE

Wipro - Austin, TX Sep 2022– June 2024 Senior Full Stack Engineer

- Developed and deployed full-stack web applications for diverse industries (AI, education, e-commerce, oil & gas) using Django, Ruby on Rails, and Laravel, ensuring seamless back-end and front-end integration.
- Engineered Borehead, a daily journal app, using TypeScript, React, Next.js, and MongoDB, implementing advanced user authentication and encryption for enhanced security.
- Designed and implemented scalable APIs with Django REST Framework and Node.js, improving data transaction efficiency and reducing latency by 40%.
- Built a decentralized DoorDash-like API with vendor and delivery app integrations, leveraging Django REST Framework for a robust back-end architecture.
- Developed an industrial logbook application with Ruby on Rails and Elixir for an oil company, streamlining tracking of maintenance and operations across multiple shifts.
- Created task management and productivity applications using React, Next.js, Vue.js, Tailwind, and Laravel, improving team collaboration and user engagement.
- Optimized ETL processes with SQL indexing and parallel processing in .NET, reducing data load times and enhancing performance.
- Configured and optimized AWS services (S3, SimpleDB) using infrastructure-as-code (IaC) tools like Terraform, enabling scalable and efficient application deployments.
- Designed relational databases (PostgreSQL, MySQL) and implemented NoSQL solutions (MongoDB, Redis, Cassandra), reducing redundancy and improving performance.
- Developed dynamic, responsive web applications using React/Redux, enhancing data manipulation and user interaction.
- Implemented TDD and BDD practices with JUnit and Cucumber-JVM, reducing bug rates by 25% and improving code quality.
- Leveraged Docker and Kubernetes for containerization and orchestration, enabling streamlined deployment and scaling of applications.
- Integrated secure payment gateways (PayPal, Apple App Store, Google Play) into e-commerce platforms for reliable payment processing.
- Led the upgrade of Kafka clusters, improving messaging infrastructure and supporting high-throughput, real-time data processing for microservices.
- Developed a machine learning-based alarm classification system using Python (Keras), identifying failure root causes and reducing downtime.
- Configured AWS S3 buckets and APIs to facilitate seamless data exchange between client platforms and cloud storage, optimizing system performance and scalability.
- Implemented large-scale machine learning solutions using frameworks like TensorFlow and PyTorch, finetuning models to improve predictive capabilities for complex tasks.
- Developed and optimized backend services with GoLang, Ruby on Rails, and Java, ensuring scalability and performance for high-traffic applications.

PHC - Toronto, Canada Aug 2017– July2022 Full Stack Developer

- Built a decentralized application (DApp) using Web3.js on the Ethereum network, enabling users to stake Ether and play a game with a React front-end interface and smart contract backend.
- Developed key features for a decentralized cryptocurrency exchange platform, including front-end trading UI and backend infrastructure using Django and React, ensuring high performance and scalability.
- Designed and implemented a non-fungible token (NFT) marketplace using ERC1155 and ERC721 standards, integrating gameplay features to generate profit for the Metaverse community and facilitating NFT transactions.
- Architected a digital asset exchange for IoT data streams, incorporating full access control and "Stream Lambdas" for processing real-time data, improving the platform's flexibility and security.

- Led the deployment of an NFT marketplace for a client in the Metaverse industry, ensuring a customized solution and optimized functionality to meet specific customer requirements.
- Modernized legacy code for blockchain bridges, providing updated builds that improved the system's functionality and compatibility with new technologies.
- Integrated decentralized exchanges (DEXs) such as SushiSwap, Uniswap, and Save, expanding the platform's trading capabilities and enhancing liquidity for users.
- Developed and implemented liquidity mining smart contracts, automating token distribution and improving user engagement within the platform.
- Created and integrated smart contracts into a Python/Flask-based application for Marinate.io, designed a secure cloudbased wallet solution, and enabled seamless token transactions.
- Deployed cloud-based applications using Docker and Kubernetes, utilizing Helm automation scripts for deployment management and scaling solutions across various environments.
- Developed Ethereum and IPFS-based software for creating a durable medium platform, leveraging blockchain to store and manage documents in a decentralized and secure manner.
- Designed and implemented ETL solutions with Azure APIM, Azure Data Factory, and Azure Functions for efficient data transfer from on-premises systems to cloud storage solutions like Azure SQL and Blob Storage.
- Optimized frontend performance by enhancing JavaScript, CSS, and HTML code, improving page load times by 25% and ensuring a smoother, more responsive user interface.
- Integrated third-party APIs, including Stripe for payment processing, enabling seamless transactions and enhancing the functionality of client-facing applications.
- Designed and implemented ETL solutions with Azure APIM, Azure Data Factory, and Azure Functions for efficient data transfer from on-premises systems to cloud storage solutions like Azure SQL and Blob Storage.
- Architected and developed cloud-based applications using TypeScript, React, NestJS, GCP, AWS, Elasticsearch, and GraphQL to provide scalable, high-performance solutions for modern applications.
- Developed a secure real-time chat API with Socket.io and integrated it into the Azure DevOps environment to ensure secure communication between users and enhance collaboration within teams
- Configured continuous integration pipelines with GitLab/Bitbucket and CircleCI, streamlining the development process and ensuring automated, reliable deployments.
- Managed version control and deployment pipelines using Git and GitHub, implementing best practices for code branching, merging, and collaboration, facilitating more efficient development workflows.
- Built and maintained the University of Alberta's Moodle-based content management system (CMS), used by approximately 40,000 students, contributing to the learning management system's effectiveness for a large academic audience.
- Designed and developed a set of custom plugins and themes for WordPress and Shopify, enhancing the functionality and user experience of client websites, which led to a noticeable increase in conversion rates and customer satisfaction.

GoDISH. com - Houston, TX Software Development Intern

Oct 2016– June 2017

- Assisted in designing and implementing server-side logic for web applications using JavaScript (React, Vue, Angular), PHP (Laravel), and Python (Django), ensuring high performance and responsiveness. □ Contributed to optimizing the application's performance by identifying and resolving bugs, improving load times and user experience.
- Collaborated closely with senior developers to design, develop, and implement new features, ensuring they met project requirements and quality standards.
- Gained hands-on experience in the software development lifecycle, including planning, coding, testing, and deployment, adhering to industry best practices.
- Integrated user-facing elements developed by front-end developers with server-side logic, ensuring smooth communication between the front-end and back-end systems.
- Worked on the development and deployment of reusable code and libraries, contributing to scalability and longterm maintainability of web applications.
- Implemented responsive design and optimized the UI/UX of web applications, improving accessibility and ensuring a seamless experience across different devices.
- Managed and maintained database schemas, ensuring alignment with business processes and implementing necessary security measures for data protection.
- Participated in regular code reviews, offering constructive feedback to enhance the quality and maintainability of code and encouraging best practices in development.

EDUCATION

Bachelor In Computer Science

Aug2013 - May 2017

University of Houston, Houston, TX
