SYSTEM ENGINEER

TECHNICAL SKILLS

Entra ID | Active Directory | MFA | SSO | SAML 2.0 | OpenIDC | ADFS | RBAC | PAM | PowerShell | Bash | DNS | Python | TCP/IP | VMware | Fresh Service | Intune | Saviynt | SailPoint | OKTA | CyberArk | Splunk | Azure Information Protection | BitLocker | SQL | Microsoft 365 Stacks | JIRA | SNOW | LDAP | GPO | DHCP | Microsoft Defender Suite, Azure Sentinel | RBAC | Window Server | JSON | SNOW | Fresh Service | SCCM | SCOM | AWS | SQL | JIIT | B2B | IAM | S3 | Imprivata PAM , OneSign | PIM | QRadar | SQL |

EXPERIENCE

System Engineer TecKube	August 2022 to Present
----------------------------	------------------------

- Managed hybrid Windows/Linux server environments, ensuring 99.9% uptime. Administered Active Directory, Group Policy Objects (GPOs), and security policies while performing Linux server management, including updates, patching, and monitoring. This effort supported the business goal of maintaining operational continuity and minimizing downtime.
- Automated repetitive administrative tasks using PowerShell and Bash scripting, increasing operational efficiency by 30%. Led Windows/Linux integration projects to enable seamless authentication and data sharing, addressing the business need for improved cross-platform collaboration and reduced manual effort.
- support ticket resolution times by 25% through proactive monitoring and automation tools like System Center Operations Manager (SCOM) and Azure Monitor. This resulted in a 40% improvement in end-user satisfaction scores, aligning with the business objective of enhancing customer experience.
- Integrated on-premises identity systems with Azure AD, reducing password-related support tickets by 95%. Leveraged Endpoint Analytics to optimize device performance and improve user experience, addressing the business need for streamlined identity management and reduced IT overhead.
- Automated user provisioning for Active Directory using PowerShell and Azure DevOps, reducing manual effort by 75% and improving operational efficiency by 60%. Achieved 40% faster onboarding and a 60% reduction in access-related tickets, addressing the business need for streamlined user lifecycle management.
- Optimized system performance by tuning databases and servers, improving response times by 35%, reducing resource usage by 50%, and increasing concurrent user capacity by 40%. Enhanced user satisfaction by 25% and cut performance-related tickets by 60%.

System Engineer Aug 2020-August 2021
IMITOR Group

- Configured Azure AD Conditional Access policies and enforced Multi-Factor Authentication (MFA) to enhance organizational security. This initiative reduced security incidents by 75% and achieved a 99.9% MFA adoption rate, ensuring secure access for 10,000+ users and aligning with compliance requirements.

- Deployed Microsoft Intune and Endpoint Configuration Manager (MECM) to manage and secure endpoints across the organization. Increased device compliance by 60% and reduced security vulnerabilities by 80%, ensuring a more secure and manageable device environment.
- Engineered performance tuning measures for databases and servers, improving system response times by 35% and reducing resource utilization by 50%. Increased concurrent user capacity by 40%, leading to a 25% boost in user satisfaction and a 60% drop in performance-related support tickets.
- Developed and executed cloud adoption roadmaps to modernize IT infrastructure, aligning technology investments with business objectives. By optimizing cloud resource utilization, achieved 30% cost savings while maintaining scalability and performance.
- Developed IAM dashboards using Power BI to provide real-time visibility into user access patterns and compliance status. This enabled 30% faster risk identification and mitigation, improving decision-making and operational efficiency.

System Engineer
THE CSI COMPANY

May 2018- July 2020

- Led the deployment of Group Policy Objects (GPO) across 5,000+ endpoints to standardize security configurations. Implemented Azure AD Connect to enable Single Sign-On (SSO) for 20+ cloud applications, reducing password reset requests by 70% and improving login efficiency by 30%, streamlining user access and enhancing productivity.
- Implemented Azure Information Protection (AIP) and Office 365 Data Loss Prevention (DLP) policies, improving data security by 80% and ensuring 100% compliance with industry regulations. This initiative safeguarded sensitive data and minimized risks of unauthorized access or leaks.
- Managed Office 365 Message Encryption and Advanced Message Encryption, protecting sensitive communications and reducing data breaches by 95%. This ensured secure internal and external communication channels, aligning with compliance requirements.
- Integrated Azure AD with 15+ SaaS applications for 5,000+ users, reducing login time by 60%, eliminating 90% of password-related tickets, and boosting productivity by 25%. This streamlined user access and improved operational efficiency.
- Implemented Azure AD Identity Protection for 8,000+ accounts, reducing compromised credential incidents by 85% and automating 95% of risk remediation. This decreased overall security breaches by 50% and improved threat response times by 70%, enhancing the organization's security posture.

EDUCATION & CERTIFICATIONS

BSc. International Law and Diplomacy, Babcock University

June 2014
