

Joseph Zhang

Staten Island, NY 10312

josephzhang9307@gmail.com

+1321 837 9599

Seasoned Full Stack Engineer with a strong proficiency in .NET and Java technologies, offering a wealth of experience and a solid track record of driving projects to success. With a background spanning over 9 years in the dynamic world of software development, I've dedicated myself to crafting robust, user-centric solutions and specializing in backend technologies.

Skills

- C#, .NET, ADO.NET, .Net Core, LINQ, SQL Server 2005,2008,2012,2014
- Java, JSP, Servlets, JDBC, Spring boot, Spring REST, JPA, Spring IOC, Spring AOP, Spring MVC, Hibernate O/R Mapping and Java JDBC
- MySQL, PostgreSQL, Oracle Database
- AWS, Azure Cloud services
- Kubernetes, Docker, Microservice
- Jenkins, Circle CI
- Javascript, Typescript, React, Vue

Work Experience

Net Full Stack Developer

MojoTech

December 2021 to October 2024

Worked on Refund Tracking project for Alameda County.

Refund Tracking project involves development and maintenance of Refund Tracking application, which is used by Alameda County Auditors and Tax Collectors to compute, track, and issue refunds. Specials Portal is a means for districts/agencies to upload special assessments to County and validate and correct entries without intervention by the Auditor.

Responsibilities:

- Analyze business requirements, and data processing needs along with user requirements to implement web-based applications.
- Developed Web applications using ASP.Net, C#.Net, HTML, CSS, JavaScript, Vue.js.
- Implemented backend REST API using .NET CORE 3.1, .Net 6.0, LINQ, Entity Framework.
- Created Tables, Views, Cursors, Triggers and Stored Procedures in SQL SERVER and DB2 databases.
- Worked on Entity Framework generating ORM Models and integrating them thru Repositories and LINQ to Entities to massage the data and to Add Migrations, Update database.
- Integrated NHibernate in the Refund Tracking application for robust and efficient data access by configuring NHibernate mappings, optimizing LINQ queries for data retrieval and manipulation, and effectively utilizing NHibernate's caching mechanisms to enhance the performance and scalability.
- Implemented both client-side and server-side validation, using ASP.NET Server Validation Controls and JavaScript, AJAX.
- Developed Tax Messaging application in C#.NET for sending payment alerts (text messages) for taxpayers using/consuming third party (Twilio) Web services.
- Developed various operational Drill-through and Drill-down and multi tab custom reports using .Net framework within SSRS.
- Evaluate and modify project source code and functions along with business logic to improve the efficiency, compatibility, and performance of the project.

- Prepared test plans, test case scenarios and expected results to verify that all required functions are performing properly.
- Provided estimates for design, build, test, and implementation phases, ensuring quality and accuracy is maintained. Performed data migration, user acceptance tests, and troubleshoot system functional usage.
- Wrote Unit Testing using XUnit for .Net Application.
- Deployed Web Applications to Microsoft Azure Service Fabric.

Java Developer

Macy's

November 2017 to November 2021

Involved in the SRM project implementing microservice and GCP Bigquery integration which enables non-technical users to do analytics on Macy's stores nationwide to improve sales.

Achievements

- Implement Microservices Architecture with Spring Boot and Big Query to allow non technical users to do analysis on stores, product, location and customers.
- Developed application using Spring Boot, Hibernate framework, Spring IOC, Spring MVC, Spring JDBC, Spring Annotations, Spring AOP, Spring Integration, frameworks, Restful web services.
- Implement Microservice endpoint which gives flexibility to the users to do analysis on store level, geographical location level and product level.
- Implement scheduled service which runs at some specific times during the night to do store level analysis which helps decision making on sales.
- Persist analytics information to Mysql database for the future use and comparison purpose.
- Used Apache Maven for dependency management and central repository of all dependency
- Created the restful endpoints, service & data access layers for the end to end communication
- Used Oracle database for data persistence and retrieval.
- Implemented log4j framework for logging the application.
- Implemented Test cases using JUnit and Tested web services with REST Client (Swagger UI)
- Worked on Writing JUnit and Integration test cases for REST and SOAP Controllers.
- Worked in an Agile Environment Participated in day-to-day Scrum Meetings.

.NET Engineer

Mobile Mini Tank and Pump Solutions

August 2014 to October 2017

Evergreen Tank Solutions provides customers with effective, efficient, ecological solutions to all their liquid & solid temporary storage, pumping and filtration needs. This project involves development and maintenance of Evergreen Tank Solutions web site and also supporting changes to customer-portal applications based on the client requirements. (With a sense of Urgency, on the fly requirements with rapid pace of development).

Responsibilities:

- Developed the web site using .NET Framework 4.5, C#, ASP.Net, Visual Studio 2013 and SQL Server 2012.
- Displaying monthly/weekly generated SSIS/SSRS reports on the Portal using C#.net, Html, JavaScript, CSS, AJAX.
- Designed and developed web pages using ASP.NET, TELERIK UI controls.
- Involved in the SDLC of requirement analysis, design and development of the web based application in the fast paced agile methodology.
- Implemented different reusable object oriented layers like Presentation Layer, Business Object Layer and Data Access Layer.
- Worked on several ASP.NET server controls like Calendar, Grid View control, Repeater Control, ObjectDataSource Control and handled server side events to optimize performance.

- Created Web Services using C# OOP concepts for downloading merchant's information through vendors.
- Implemented Tables, Indexes, Relations, T-SQL Ad-hoc Queries, Views, User Defined Functions (UDF) and Stored Procedures in SQL Server 2012.
- Implemented UI using HTML, XML, CSS, JavaScript, AngularJS, AJAX and Web Form Controls to create responsive web pages, developed Master Pages.
- Worked on .NET Security features such as Authentication & Authorization, Forms-based Authentication and Authorizing Users, Roles.
- Configured Web.Config file for the configuration of the entire Web Application.

.Net Engineer

Bridgestone Americas

August 2013 to July 2014

Bridgestone is one of the largest manufacturer of Automobile tires in the world.

The Off ticket Auto Disposition Application is designed to disposition off ticket materials from a desktop. This Application involves two different modules like the requirements table, owned by Process Engineers and the second module involves application to look for comparable fabric and width stock within the requirements off the table that PE supplies. The main objective of this project is waste reduction and cost savings for plant.

Responsibilities:

- Implemented OO Design and Concepts & data modeling to analyze and define data requirements need to support business requirements.
- Involved in relational Database design, creating tables, views, user defined functions, triggers and stored procedures using T-SQL, PL/SQL in MS SQL Server 2012.
- Involved in the SDLC of requirement analysis, design and development of the web based application.
- Worked extensively on Grid view custom templates for providing additional flexibility. Implemented all data manipulations like Update, Insert and Delete on Grid view.
- Used Master Pages for branding purposes by displaying the logo and copy right information on every page and maintaining the same look and feel across the entire application.
- Used Html and JavaScript to provide faster validation across the web pages.
- Extensively worked on Consuming, Calling, Transmitting and Processing Web Services through SOA.
- Designed and developed dynamic ASPX web pages using C#, ASP.Net, XML, HTML, Java Script and JQuery.
- Worked With ASP.NET Web Parts, Navigation Control and Master Pages and developed Cascading style sheets (CSS) for consistent look and feel of the website.
- Performed Unit testing with improved debugging standards.

Education

Bachelor's degree in Computer Science

Illinois Institute of Technology

2009 to 2013

Bachelor of Science

Skills

- Java
- Microsoft SQL Server
- MySQL

- Unit Testing
- .NET
- .NET Core
- C#
- AWS
- Azure
- ADO.NET
- Spring
- Git
- RabbitMQ
- OOP
- Computer science
- Relational databases
- Angular
- DevOps
- Cloud development
- SQL
- SDLC
- ASP.NET Core
- JavaScript
- Unit testing
- JSON
- Web services
- Application development
- Design patterns
- REST
- XML
- AJAX
- Service-oriented architecture
- SOAP
- ASP.NET
- MVC
- GitHub
- TFS
- Bootstrap
- SVN
- Continuous integration
- Database design
- TypeScript
- Test-driven development

- NoSQL
- Scrum
- Node.js
- Debugging
- Software architecture
- Hibernate
- Jenkins
- Scalability
- React
- Entity Framework
- CI/CD
- Docker
- CSS
- Redis
- Kubernetes
- DB2
- HTML5
- C
- UI
- Databases
- Front-end development
- Test cases
- Kanban
- APIs
- Cassandra
- Business requirements
- SSRS
- Visual Basic
- Business analysis
- SaaS
- Software troubleshooting
- Customer service
- Microservices
- Scripting
- Redux
- RESTful API
- Full-stack development
- Software deployment
- Jest
- Back-end development

- Agile
- Communication skills
- Jira
- PaaS
- jQuery
- Spring Boot
- MongoDB
- Software development
- IT
- Hadoop
- C++
- Analysis skills
- Visual Studio
- Terraform
