+1 202-430-4434 • kewal2123@gmail.com • linkedin.com/in/kewalpasad

Highly accomplished Senior Software Engineer with 6+ years of experience leading the development and delivery of high-performance web applications. Proven ability to drive technical innovation, mentor teams, and deliver impactful solutions using Angular, NestJS, and AWS. Adept at translating business needs into technical specifications and fostering collaborative environments to achieve project success. Passionate about building scalable, maintainable, and user-friendly systems.

WORK EXPERIENCE

Fidelity Investments • Raleigh, NC • 05/2022 - Present

Angular 17, NestJS, GraphQL, RxJS, Nx, Material Design, LaunchDarkly, Dynamo DB, Node.js, Jest, Cypress, Storybook, Cucumber, Typescript, Javascript, HTML, CSS, JIRA

Senior Software Engineer

- Modernized two full stack applications using Domain Driven Design based on nx monorepo for Angular, NestJS, and GraphQL, which reduced maintenance cost, reducing time to add new features, resulting in a 52% increase in positive user feedback and up to \$7.1 million dollars monthly by increased appointments and reduced associate call minutes.
- Implemented automated testing using Angular Component Harness, Storybook, Cypress, and Cucumber, integrated into CI/CD resulting in a reduction in bug reports, and faster releases, achieving 98% test coverage on both applications.
- Implemented optimization and made strategic architectural decisions about using feature flags, logging, web workers, caching, Angular deferred views, and lazy loading, also created event-based lightweight state management library based on RXJS and redux pattern resulting in faster load times, smaller bundle size, and improved accessibility with lighthouse scores 77, 91 and 83.
- Provided technical leadership and mentorship to 3 junior developers, onboarded a team of developers, conducted code reviews, and established workflows, resulting in improved code quality, maintainability, team velocity, and faster onboarding.
- Contributed to a cross-functional team's LLM proof-of-concept for AgentBot aimed at reducing human-derived content. Authored a few other proof-of-concepts to test out the feasibility of the functionality at various stages of product.
- Partnered with product owners, business analysts, and other stakeholders to refine requirements, translate business needs into technical specifications, and contribute to project planning and roadmapping resulting in the successful launch of key features, on-time and within-budget project delivery.

National Institute of Health (Axle Informatics) • Bethesda, MD • 10/2019 - 04/2022

Angular 13, RxJS, Node.js (LoopBack 4), PostgreSQL, Palantir DB, MongoDB, HTML, CSS, Typescript, LernaJS, OAuth, Ngx-Formly, PrimeNG, SendGrid API, Mocha, Jasmine, Istanbul, JIRA, Git, Bootstrap

Software Developer

- Contributed to 3 Different projects by creating efficient, responsive UI designs, and prioritizing user experience and performance. Utilized JIRA to implement Agile methodologies within cross-functional teams, resulting in a 10% increase in client satisfaction and higher approval rates for vendor projects.
- Played a key role in the complete rewrite of legacy Research Management Software from Angular 1.6 to version 9, incorporating PrimeNG components to present data in various layouts, including forms, timelines, expandable tables, calendars, and charts. Additionally, upgraded the backend from NodeJS 4 to 10 using the Loopback4 framework to connect to Palantir DB, MongoDB, and SharePoint DB.
- Implemented critical features such as a global search, document upload component that saves data to MongoDB, email notifications using SendGrid API services, and integrated Ngx-Formly for creating custom dynamic reactive forms.
- Followed best practices and applied optimization techniques, including lazy loading of modules, the integration of LernaJS for managing module dependencies, and the addition of caching mechanisms to reduce the number of API calls.
- Involved in development of EventService library based on RxJS Observable streams for state management.
- Ensured software quality by adding Unit and Integration tests using the Mocha-Jasmine testing suite, achieving a 92% code coverage. Additionally, actively participated in the review of Pull Requests from other developers to ensure that new features met the established high coding standards, resulting in the delivery of bug-free software to the client.

Switch Pitch • Washington, DC • 10/2018 - 04/2019

React 16, Node.js, AWS S3, AWS LAMBDA, CrunchBase API, Stripe API, IBM Watson NLU, Airtable, Mix panel, HTML, CSS, JavaScript, Asana, Git, React-bootstrap, Kanban, Python 3, NumPy, Panda library

Software Developer

- Developed an admin dashboard for logged-in users, providing details of their top watchlist startup. This was achieved using React 16 and React-bootstrap. Integrated payment processing was implemented through the Stripe API, and user statistics were tracked via Mixpanel, a website analytics tool, on the SwitchPitch platform.
- Configured a serverless AWS Lambda service in Node.js to retrieve startup data by scraping news, articles, and blog sites. Additionally, data was fetched from Mattermark and CrunchBase using APIs, with the resulting data stored in AWS S3.
- Set up another AWS Lambda service to analyze the scraped data using IBM NLU. This process enriched the startup data with information such as city, state, country, and keywords, categorically stored in Airtable.
- Designed and created a responsive landing page for the company website, showcasing product details.

Cocretec Systems • Mumbai, India • 07/2016 - 06/2017

AngularJS 1.2, PHP, MySQL, HTML, CSS, JavaScript, jQuery, Bootstrap, Kanban, Python, Embedded C

Software Engineer

- Designed and developed Parking Lot Management System using AngularJS and PHP and MySQL.
- Implemented logic for tracking open parking spaces and billing calculations.
- Utilized jQuery for drag-and-drop functionality.
- Prototyped and programmed Microcontrollers using C and Python for prototyping.

Bombay Apps • Mumbai, India • 05/2015 - 07/2016

HTML, CSS, JavaScript, jQuery, PHP, MySQL, Bootstrap

Web Developer

- Led requirement gathering, analysis, and UI component development.
- Developed portal pages using PHP, JavaScript, jQuery, CSS, and HTML.
- Utilized HTML, JavaScript, AJAX, and CSS for client-side programming.

EDUCATION

Master Of Science in Computer Engineering

The George Washington University • Washington, DC • 07/2019

Bachelor Of Engineering in Electronics Engineering

University Of Mumbai • Mumbai, India • 12/2015

SKILLS

Programming Languages: TypeScript, Javascript, Python

Front-end Technologies: Angular 19, RxJS, HTML, CSS, React 17, NX monorepo, Launch Darkly Feature Flag, State Management, WebWorker, Material design, Bootstrap, PrimeNG, Accessibility

Back-end Technologies: Node.JS, NestJS, GraphQL, NoSQL, SQL, ExpressJs, Serverless, RESTful API, OAuth, JWT

Testing Technologies: Jest, Jasmine, Mocha, Cypress, Istanbul

cloud and Devops Technologies: AWS, Azure cloud, AWS Lambda, Docker, Jenkins, CI/CD, Git, GitHub

Other Technologies: JIRA, Agile
