Houston, TX, 77041, United States | +18652452325*

Senior Backend Engineer with extensive experience designing and building high-performance, scalable backend systems for automotive, financial services, and home services platforms. Expertise in microservices, event-driven architectures, and cloud-native development with a strong focus on real-time processing, and system optimization.

Work Experience

Senior Backend Engineer

May 2022 - Present

[Wolf Carries, LLC](#) | Ohio

- Designed and developed several back-end applications handling enrollment, diagnostic, and maintenance minder data and ingesting it into various data sources.
- Secured data at every level, including data at rest, data in transit, and PII data. Secured and masked the session IDs without exposing the real IDs using express session.
- Implemented data streaming using Kafka and performed data aggregations using KStreams and KTables
- Streamlined the overall efficiency of the system by leveraging browser caches like IndexedDB, local storage, and server-side cache using Elasticsearch.
- Managed multiple concurrent projects ranging from \$100k - \$300k with 8+ stakeholders each.
- Directed a 20-person team across 3 departments in 2 locations.

Backend Engineer

May 2017 - May 2022

[Angi](#) | Indianapolis

- Involved in design and development of rebranding login flow and user authentication. Designed and developed several Microservices REST and Spring Boot. Design and development of User Interfaces using React and Redux.
- Implemented integration tests using Cucumber and generated imposters using Mountebank. Secured Restful API using OAuth2 and Spring Security.
- Improved the overall efficiency of the web application by using Redux for Global State Management and reducing back-end calls.
- Improved UI performance by 50% by compressing the payloads and caching precomputed values for faster calculations in the grids.

Backend Developer

Oct 2015 - May 2017

[Westlake Financial Services](#) | Los Angeles

- Designed and developed several microservices, batch jobs, and web applications using Kafka and REST.
- Implemented an API gateway using Spring Cloud Gateway and service discovery via Netflix Eureka.
- Improved the performance of the system by implementing caching using Redis.
- Wrote several consumer, producer, and streaming applications using Kafka. Converted high-level requirements into high-level design and then detailed design.
- Provided application support for outage events and production issues.

Core Skills

Javascript, Typescript, Python, Golang, Java, PHP, Node.js, React, Angular, Next.js, Apache Kafka, REST, Spring Boot, Microservices, RabbitMQ, Docker, Elasticsearch, Grafana, IT Security, API Integration, JSON Web Tokens (JWT), JSON, XML, GraphQL, Large-scale Projects, Redis, Database Architecture, AWS (ECS, API Gateway, S3, RDS, ElastiCache, EC2, EKS, ELB), AWS Lambda, AWS Step Functions, Terraform, Containerization, MongoDB, CI/CD Pipelines, API Design, Kubernetes, Amazon Web Services (AWS), Azure, GCP, PostgreSQL, Authentication, ECMAScript (ES6), RDS, Relational Database, Dynamodb, MySQL, CI/CD (GitHub Actions, GitLab CI/CD), Agile / Scrum Tools and Techniques

Education

Texas A&M International University

Sep 2011 - Sep 2015

Bachelor of Science Computer Science
