

Sr Java Full Stack Developer

- Having around 7 years of experience in all phases of Software Development Life Cycle (SDLC) which includes Design, Implementation, Development, Testing, Integration and Deployment of Enterprise Web based applications using Java/J2EE technologies.
- Expertise in working with Waterfall, RUP (Rational Unified Process), Agile and Scrum methodology environments.
- Extensively involved in Test Driven Development (TDD).
- Experience with Java 1.8 features such as Lambda Expressions for making inline function calls by using Functional Interfaces which makes code readable and concise.
- Expertise in developing multi-tier enterprise applications using Java/J2EE technologies and various frameworks such as Spring, Struts, Servlets, JSP, Hibernate, JDBC, JMS, IBM MQ Series, JNDI, and Java Beans.
- Proficient in implementation of frameworks like Struts, Spring Boot, Spring MVC, Spring Web Flow, Spring IOC, Spring AOP, Spring Security, Spring Data, Spring Batch, JSF and ORM frameworks like Hibernate and IBATIS.
- Proficient in developing Web Services, related technologies & frameworks: WSDL, SOAP, REST, SOAPUI and generating client's client using Eclipse for Web Services consumption.
- Familiarity with common algorithms and data structures, such as searching and sorting algorithms (e.g. linear search, binary search, bubble sort, merge sort, etc.)
- Knowledge of data structures for specific problem domains, such as Trie for prefix search, and suffix array for substring search.
- Developed Microservices using Spring Boot and developed RESTful web services.
- Experienced in creating and configuring continuous delivery pipelines for deploying microservices and lambda functions using Jenkins CI server.
- Expertise in developing web pages using HTML5, CSS3, JavaScript, jQuery, Ajax, AngularJS and NodeJS with webpage cross browser compatibility and responsive web design using Bootstrap.
- Full Stack Modern Progressive Web Apps - ReactJS, Redux, GraphQL.
- Independently integrate multiple APIs and new features using React + GraphQL stack.
- Strong knowledge of RDBMS concepts and experience working with relational databases like MySQL, Oracle SQL PL/SQL, SQL Server (MS SQL), DB2 and NoSQL databases like MongoDB and Oracle Performance Tuning.
- Experience working with Amazon Web Services like EC2, S3 bucket, RDS, SQS, Elastic Load Balancer, Dynamo DB, through AWS Console and API Integration.
- Understanding of MuleSoft Anypoint Platform for API-led connectivity and Knowledge of Mule ESB for integrating enterprise applications.
- Experience in Distributed Application Development and Object-Oriented Programming (OOP).
- Configured AWS Identity and Access Management (IAM) Groups and Users for improved login authentication.
- Good experience in setup, configure continuous build processes using Jenkins, Maven, Ant and Gradle.
- Experience in developing Server-Side Code with good knowledge of enterprise and persistence design patterns like Singleton, Factory, Facade, Front Controller, Data Access Object and MVC.
- Experience in software configuration management using CVS, Tortoise SVN, GitHub and IBM Clear Case.
- Extensively worked on JIRA for tracking stories in a Project in a different methodology of Software Development Life Cycle.

Core Competencies

Languages Java, J2EE, SQL, PL/SQL

J2EE Technologies Servlets, JDBC, JSP, JMS

Mark-up/XML Technologies HTML5, CSS3, JavaScript, jQuery, AJAX, AngularJS, XML, DOM, JSON

Tools & Frameworks Struts, Spring, Spring MVC, Spring Boot, JUnit, SOAP UI, ANT, Maven, Jenkins, Hibernate, IBatis

Cloud AWS (Amazon Web Services)

Web Services Micro Services, SOAP, Restful, WSDL, JAX-WS, Axis2

Web/App Servers IBM WebSphere, Apache Tomcat, WebLogic Server

Database Oracle, SQL Server, MySQL, MongoDB/NoSQL, PostgreSQL

IDEs Eclipse, Spring Tool Suite (STS), IntelliJ IDEA

Methodologies Agile, Jira, Scrum

Version Control Git, SVN

OS & Environment Windows, UNIX, Linux

Professional Experience

UnitedHealth Group, United States
Sr Full Stack Developer, Minnetonka

Jul 2024 - Present

Responsibilities:

- Followed Agile development environment, involving daily stand-up meetings on call and participated in project discussions.
- Used Eclipse to develop source code as well as debug the application and used Maven as build tool.
- Used Micro services architecture, with Spring Boot-based services interacting through a combination of REST and Spring Boot.
- Mainly responsible for developing RESTful API using Spring framework. Developed different controllers that return the response both in JSON and XML based on the request type.
- Created REST Microservices APIs using Spring Boot Application.
- Expertise in working with JavaScript and exposure to various MVC JavaScript frameworks NodeJS.
- Established JDBC connection to retrieve the customer account details and transactions list from the Oracle database.
- Responsible for coding SQL Statements and Stored procedures for back-end communication using JDBC.
- Extensively worked on Prepared Statements and Callable Statements of JDBC 2.0 API to access the Oracle database.
- Used the node.js MVC Frameworks in the development of web applications.
- Debug the application using Firebug to traverse the documents and manipulated the nodes using DOM and DOM Functions.
- Brushed up knowledge and worked with DevOps tools with continuous deliveries deployments.
- Build & deployed wars using Maven, Tomcat on UNIX environment.
- Processing data ingestion and entity resolution using Hadoop and Pig.
- Applied Hadoop MapReduce to reduce processing time from two weeks per year of data to one day.
- Used Kafka in a POC to send data and persist on Cassandra Database.
- Install Kafka on Hadoop cluster and configure producer and consumer coding part in java.
- Deployed the Application on Tomcat server.
- Created unit test cases for Smoke & Regression Testing using Cucumber and Junit testing framework.
- Debugging the application by running the server in debug mode and having the experience in usage of log4j to log the information in log files.
- Used Jira for bug tracking and task management. Logging using Log back tools.
- Used GIT and Stash for creating branches, pull requests and merging.

Environment: Spring Boot, Log4j, GIT, MyEclipse, JSON, XML, SOAP, HTML, CSS, JavaScript, Kafka tool, Web Services, Apache Tomcat, Web logic application server, spring Tool suite, Java 1.8, J2EE, Maven, JIRA.

DELTA AIR LINES, United States
Sr. Full Stack Developer, Atlanta

Jan 2024 - Jun 2024

Responsibilities:

- Used Spring framework MVC in the development of new modules based on requirements.
- Utilized various utilities like JSP, JSTL, JavaScript, HTML, & CSS, jQuery.
- Refactored existing project to make it more RESTful and thread safe for XML marshalling and unmarshalling used JAXB.
- Worked with databases like Oracle.
- Used Servlets as an interface between frontend and backend to handle HTTP requests and to send the response back to the front end.
- Implemented logging for the whole application using Log4j.
- Involved in daily scrum meetings, worked on the sprint tasks in the Agile Scrum development.
- Worked with core java concepts such as OOPS, Multi-threading, collection framework and Exception handling.
- Utilized Hibernate for Object/Relational Mapping purposes for transparent persistence onto the SQL SERVER
- Used JIRA to assign, track, report and audit the issues in the application.
- Spring MVC model integration for front-end request action controller.
- Used Apache Axis Service Engine for creating and deploying Web Service clients using SOAP.
- Designed and developed application based on MVC design pattern using struts Framework.
- Consumed SOAP and Restful web services in SOA environment and used SOAP UI for testing.
- Used Web services (SOAP) for transmission of large blocks of XML data over HTTP.
- Used Groovy in conjunction with Jenkins pipelines to automate CI/CD processes.
- Implemented event-driven architecture using Kafka, RabbitMQ.
- Involved in installing and configuring Maven for application builds and deployment.

Environment: Spring MVC, JSP, JSTL, JavaScript, HTML, & CSS, jQuery, XML, JAXB, Oracle, Servlets, Hibernate, SQL, Soap, Maven, Jira.

Bank of America, United States
Sr Java/J2EE Developer, Addison

Jul 2023 - Dec 2023

families to operate a common account having an account owner and other authorized users. Improvements were also being made on the accessibility and features on the account. Responsibilities:

- Followed AGILE Methodology to promote iterations, collaboration, and process adaptability and participated in SCRUM Meetings throughout the life cycle of project.
 - Used Spring MVC to build the Web application services.
 - Designed and developed Application based on Spring framework using MVC design patterns.
 - Implemented Spring MVC Controller module for better handling of client request, consume, RESTful data service and sending response back to client.
 - Developed highly Complex Stored Procedures, Packages, Functions, Cursors and Materialized Views in PL/SQL Developer, Toad in Oracle 10g environment.
 - Involved in integrating applications with other application using IBM WebSphere.
 - Used Java for XML Web Services (JAX-WS) to convert Java Objects to XML conversions. Created RESTful web services interface to Java-based runtime engine and accounts.
 - Coded and debugged the stored Procedures, Packages and Views in Oracle Databases using SQL and PL/SQL, which were called by user-oriented application modules.
 - Developed the Web Services Client using SOAP, WSDL description to verify the credit history of the new customer to provide a connection.
 - Developed various screens for the frontend using ReactJS and used various predefined components from NPM and Redux libraries.
 - Updated/modified JSP pages using Struts tags, used jQuery and its validator plugin for validating Forms in the presentation layer.
 - Developed static pages in web Application using HTML, CSS, JavaScript, and jQuery, Vue.js React.js.
 - Worked in using React JS components, Forms, Events, Keys, Router, Animations and Flux concept.
 - Developed React Components and used Redux Promise API for making async calls.
 - Implemented AJAX for couple of navigation screen flows for asynchronous calls.
 - The middleware interaction used JMS/IBM WebSphere MQ series for transferring messages between different components using the JMS/Mail API framework.
 - Working on AWS-ECS webservices and monitoring the apps on Honeycomb and Splunk dashboards.
 - Worked on the Kotlin for building the backend components and API resources.
 - Used HQL (Hibernate Query Language) to store the persistence data into the PostgreSQL database.
 - Used ANT for builds creation and to push into different environments.
 - Developed CI/CD system with Jenkins on Kubernetes environment, utilized Kubernetes and Docker for the runtime environment for the CI/CD system to build, Test and Deploy.
 - Deployed the applications using WebLogic Application server.
 - Worked on Jenkins Pipeline for Automation jobs.
 - Used Bitbucket, git as version control tool.
 - Used log4j to capture the log that includes runtime exceptions, debugging and request/response/error logging.
- Environment:** Java, JSP, Servlet, HTML, CSS, JavaScript, jQuery, AJAX, ReactJs, Jenkins, Oracle, Spring, Hibernate, LDAP, JAXP, JAXB, JMS, SVN, WebLogic, MYSQL, Vue, IBM WebSphere, RESTful Web Services, Kubernetes, Kotlin, Docker, ANT, AXIS.

GGK Technologies, India

Jun 2019 - Jul 2022

Java Developer, Bengaluru

Responsibilities:

- Used agile methodology for software development. Based on the business needs of the application, developed functional and non-functional features of the application.
- Participated in all Agile scrum ceremonies, project planning, design discussions and release planning activities.
- Proficient in using servlets. Applied MVC implementation to the web application.
- Used Design patterns such as DAO, Singleton, Session façade which helps in distribution of roles and responsibilities across various layers of processing.
- Developed UI interface using HTML, CSS, jQuery and Angular, JavaScript, AJAX and Tag libraries and Bootstrap.
- Wrote JUnit test cases for unit testing. Used maven to build applications and created multi module maven project and used Jenkins for continuous integration.
- Performed Module and Unit Level Testing with JUnit and Log4J for debugging and error tracking.
- In production support responded to service tickets and service requests within established time-based requirements.
- Designed and developed REST based microservices using Spring Boot
- Used Hibernate in Data Access Layer to access and update information in the database.
- Extensively used SQL for querying databases.
- Migrated test and use cases for applications to AWS cloud with public and private IP ranges to accelerate development productivity by decreasing test-run times.

- Attended daily Scrum calls in which I update about daily work, proposed future work, and discussions on any blocking issues.
- Web Services experience in SOA using Apache AXIS, IBM Integration Bus, SonicESB, IBM Message, Broker, SOAP Framework and WSDL.
- Worked on Hibernate for mapping the java objects to relational database and SQL queries to fetch the data, insert and update the data from the database.
- Used Jenkins as build management tool for continuous integration process and used Git as Version Control tool.
- Involved in day-to-day handling of JIRA issues (production issues at time) that involved data inconsistencies that required to be solved in very less time.

Environment: Spring boot, Spring MVC, Bootstrap, using HTML, CSS, jQuery, Angular, JavaScript, AJAX, Junit, Log4J, AWS, Hibernate, SQL, Soap, WSDL, Jenkins, Jira.

Nisum Technologies, India

Apr 2017 - Jun 2019

Java Developer, Chennai

Responsibilities:

- Extensively worked on JIRA for tracking stories in a Project in a different methodology of Software Development Life Cycle.
- Implemented responsive web-based applications using HTML5, CSS3, JavaScript, jQuery.
- Developed SCM by using JSP/HTML for each user interface. Servlets standard validations are used as the controllers for business logic and using JDBC, XML parsing techniques using MVC.
- Experience in installing, configuring, and deploying applications on Web Logic Server.
- Developed a DAO pattern to retrieve the data from the database.
- Designed a mailing application to send notifications to the Oracle users for intimating to start the following workflow.
- Used Multithreading concept to post data from files to tables involving the transformation of files from one format to another.
- Configured Struts-config.xml, Tiles-def.xml, and various properties files provided by Struts Framework for the implementation module.
- Extensively used the Struts tag libraries (Bean Tags, Logic Tags, HTML Tags, etc.) and Custom tag libraries.
- Developed web applications using Struts, Spring, and iBatis framework.
- We kept up the bean life cycle by utilizing Spring IOC, which keeps session information about beans.
- Worked with Log4J to capture the log that includes runtime exceptions.
- Deployed application on the Client Linux server.
- Implemented IBM WebSphere Application Server to deploy the application.
- Used ANT build tool for compiling and generating war files.

Environment: Core Java, J2EE, JSP, HTML, MVC, Servlets, Struts, JMS, MDB, EJB3.1, JUnit, PL/SQL, DAO, Web Logic Server, Ant, SOAP, JAX-WS, WSDL, Junit, SQL.

Education

SUNY Buffalo, Buffalo, United States, Master's in Computer Science, Aug 2022 - Jul 2023

SRKR Engineering College, Bhimavaram, India, Bachelor's in Computer Science, Jun 2014 - Apr 2018
