

Education

Master of Science in Business Analytics

University of North Texas, Denton, Texas

Jan'23 - Dec'24

GPA 3.8/4

Bachelor of Engineering in Computer Science

Alard College of Engineering, Pune, India

Aug'12 - May'16

GPA 7.5/10

Coursework: Business Analytics, Data Structures & Algorithms, Machine learning, Data Visualization, Database Systems and Design, Data-warehousing, Data Mining, Business Process Analysis.

Professional Experience

University of North Texas: Student Services Assistant Welcome Desk

Jul'23 – Dec'24

- Supported the student services team with a deep analysis of data from Tableau and Excel to understand key student concerns, FAQs, and suggest methods for improvement.
- Received calls, forwarded concerns to the right individual or department, and scheduled appointments for staff or prospective students. Educated the students or visitors about resources, events or activities on the campus.

Genpact India: Business Analyst

Mar'21 - Jan'23

- Spearheaded financial analytics initiatives by developing comprehensive data visualization dashboards using SQL and Google Data Studio, resulting in 30% improved reporting efficiency for HR stakeholders.
- Implemented advanced Excel functions including pivot tables, vlookup, and complex formulas to analyze and process payroll data for 500+ employees, ensuring 100% accuracy in incentive calculations.
- Led end-to-end payroll analytics projects, defining key requirements and metrics for performance-based compensation, directly impacting business decisions and employee satisfaction.
- Designed and maintained automated weekly and monthly reporting systems, tracking KPIs, quality metrics, and productivity indicators, resulted in 40% reduction in manual reporting time.
- Partnered with senior stakeholders on data-driven insights and recommendations, resulting in the optimization of incentive structures and improved team performance metrics.

Genpact India: Real-Time Analyst (RTA-Workforce Management Team)

Jan'17 - Feb'21

- Achieved the optimal staffing levels as per the forecasted call volume and attendance with SLA's (service level) focused on an 85% average threshold. Proactively identified schedule deviations or gaps in staffing. Initiating real-time corrective actions with the support of team-leads to ensure SLAs were met consistently at every interval.
- Created and updated in real time a web-based dashboard using the Verint Workforce Management software, highlighting live agent schedule adherence and operational efficiency.
- Schedule adherence increased by 20% by publishing daily KPI reports highlighting service levels, productivity, occupancy rate, and average handling time.

Technical Skills

- **Tools & Languages:** Microsoft Excel, SQL, Python, Tableau, R, QlikView, VBA, Jira, Visio
- **Data Analysis:** Exploratory Data Analysis, Predictive Modeling, Statistical Analysis
- **DB & Cloud Technologies:** MySQL, Eclipse, Snowflake, SAS Enterprise Miner, AWS, Google Data Studio

Academic Projects

- Schematically designed and developed a complete data warehouse for a car rentals website based on ER and dimensional modeling. Created MySQL database, defined schema, tables, relationships, and implemented ETL processes to integrate data. Displayed the user interface options and results using QlikView.
- Presented a comprehensive research capstone project on Students' Mental Health analysis during the pandemic. Used python for data preprocessing, data visualization with machine learning models of logistic regression and gradient boosting. Designed the study by using a dataset of survey questionnaires, running statistical tests on the data (e.g. ANOVA, regression analysis), and generating insights from data to present evidence-based recommendations that will help improve mental health support services.
- Created a predictive model in SAS Enterprise Miner that forecasted the NBA player's career longevity (5+ years) using yearly performance statistics. Compared multiple models developed (auto-neural network, logistic regression, decision trees) and identified the auto-neural network as the most accurate with the highest ROC value and lowest misclassification rate.
