

SAI KUMAR ADDURI

Full Stack Java Developer

☎ +1-720-742-3843 ✉ saikumar.adduri2000@gmail.com

Professional Summary

- Full Stack Java Developer with 3+ years of experience building scalable, secure enterprise applications using **Java 8+, Spring Boot, and Microservices**.
- Skilled in designing and deploying **REST APIs, React-based UIs, and cloud-native solutions** on AWS, Azure, and OpenShift.
- Hands-on expertise with **Docker, Kubernetes, Jenkins, and GitHub CI/CD** for automated deployment and testing.
- Experienced with **SQL Server, MySQL, and MongoDB** for data modeling, performance tuning, and Liquibase migrations.
- Strong focus on software quality through **JUnit, Selenium, RestAssured, and SonarQube** validation pipelines.

Technical Skills

Languages: Java 8+, JavaScript, TypeScript, Python, Bash, Shell, SQL

Frameworks & Libraries: Spring Boot, React, Bootstrap, Microservices, JUnit, Jasmine, Karma

Cloud Platforms: AWS, Azure, OpenShift (OCP), GCP

Databases: MS SQL Server, MySQL, MongoDB, Liquibase

DevOps Tools: Jenkins, Maven, Gradle, GitHub, Harness, UCD, Docker, Kubernetes

Security & QA: SonarQube, Checkmarx, GitLab, Black Duck, Selenium, JMeter, Postman, RestAssured

Monitoring: ELK Stack, Splunk, AppDynamics

Concepts: REST API, Kafka, Apigee Integration, Agile/Scrum, SDLC, Cloud-Native Architecture

Experience

Tata Consultancy Services (TCS)

Jan 2021 – Dec 2022

Software Developer

Hyderabad, India

- Developed scalable microservices using **Java 11, Spring Boot, and REST APIs** for healthcare data exchange.
- Containerized deployments using **Docker** and managed clusters on **Kubernetes and OpenShift**.
- Created interactive dashboards using **React, Bootstrap, and JavaScript**, improving user experience by 30%.
- Integrated CI/CD pipelines through **Jenkins, Maven, and GitHub Actions**, reducing deployment time by 35%.
- Implemented **DevSecOps practices** with SonarQube, Checkmarx, and Black Duck, ensuring 0 critical vulnerabilities in releases.
- Enhanced system reliability with ELK Stack and AppDynamics, achieving 99.8% uptime SLA compliance.
- Improved database performance across **SQL Server and MongoDB** by indexing and schema optimization.
- Built real-time event-driven processing with **Kafka** and Apigee APIs, increasing data throughput by 25%.
- Collaborated with business stakeholders to modernize legacy modules into **microservice architecture** improving maintainability.

Goal Street

Apr 2020 – Jul 2020

Software Developer Intern

Hyderabad, India

- Developed front-end modules in **React and TypeScript** integrated with REST APIs for analytics dashboards.
- Created backend RESTful services in **Spring Boot**, managing user authentication and data transformation workflows.
- Optimized SQL queries in MySQL, improving reporting latency by 40%.
- Implemented CI/CD automation with Jenkins and Maven, ensuring consistent build deployment.
- Configured ELK and Splunk for system observability and log tracing.
- Built automated API test suites using Postman, RestAssured, and JUnit for functional validation.
- Collaborated in Agile sprints, actively participating in code reviews, estimations, and feature demos.
- Implemented role-based access and data validation logic improving security and stability of user workflows.

Additional Information

Proficient in **Kafka, Apigee, and Liquibase** integrations for event streaming and schema management.

Strong foundation in **DevSecOps and CI/CD pipelines** with expertise in Jenkins, SonarQube, and Kubernetes automation.

Experience supporting mission-critical healthcare platforms ensuring HIPAA compliance and security audits.

Skilled in performance tuning, scalability design, and debugging distributed microservices in production.

Continuous learner with a focus on cloud-native transformation and advanced automation practices.

Education

University of Colorado Denver

Master of Science in Computer Science

Denver, CO

Dec 2024
