EDUCATION

University of Florida

Master of Science in Computer Science; GPA: 3.7/4.0

Gainesville, Florida

Aug 2022 – May 2024

SKILLS

Programming: Java, JavaScript, TypeScript, Python, SQL, NoSQL, **Data Structures Algorithms**, Design Patterns.

Technologies: REST APIs, GrapQL, **Spring Boot**, **Spring Security**, AOP, Hibernate, nodeJs, ExpressJs, JWT, HTML, TailwindCSS, ReactJs, JUnit, Mockito, Webpack, Mocha, Jest, Cypress, Webclient, **OpenAPI/Swagger**, Kafka, **Apache Jmeter**, **Microservices**, **Agile methodology**, Distributed Systems, Data modeling, User stories

Devops/Cloud: Linux, Docker, Kubernetes, Helm charts, YAML, **GCP**, AWS, **SonarQube**, **Jenkins**, **CI/CD**.

Developer tools: Git, **Github**, **Debugging**, VS Code, **IntelliJ**, Eclipse, **Postman**, Maven, Tomcat, Jira.

Databases: MySQL, PostgreSQL, DBeaver, MongoDB, Elasticsearch ELK stack, Redis.

WORK EXPERIENCE

Community Dreams

Volunteer Software Engineer

Remote

Sep 2024 – present

- Developed RESTful APIs for CRUD operations on Employees, Attendance, Task Records and leave management for HR management System. Implemented business logic for time tracking and leave approval processes using Spring Security for authentication and authorization.

Brillio Technologies

Senior Software Engineer

Hyderabad, India

Feb 2022 – Aug 2022

- Implemented API load and performance testing strategies using tools like **Apache JMeter** and Gatling to simulate real-world traffic, analyze system scalability, and optimize **backend performance**.
- Designed end-to-end CI/CD pipelines using Jenkins, Agile practices, and Terraform to automate infrastructure provisioning (GCP) and GitOps-driven deployments (Flux), reducing deployment cycles by 40% and errors by 50%.
- Achieved an average of **98%** test coverage across microservices by leveraging Test-Driven Development (TDD) methodology, ensuring robust and reliable code quality.
- Utilized **Docker** to create and manage containerized applications, enabling efficient development and deployments.

Wipro Technologies

Project Engineer

Hyderabad, India

Jun 2019 – Feb 2022

- Developed and enhanced REST APIs using Java, Spring Boot, Node.js, Express.js, JavaScript, and Sequelize ORM to facilitate **RDBMS CRUD** operations as full stack developer.
- Integrated services using **RestTemplate** and GSON library. Implemented new features according to user stories and provided support and bug fixes throughout the software development lifecycle (**SDLC**).
- Implemented **Test-Driven Development** using unit tests with **96%** code coverage, verified using **SonarQube**.
- Integrated Docker into CI/CD pipelines using Jenkins to streamline and reduce deployment time by **40%**.

PROJECTS

Stock Portfolio Analyser

[Click here](#)

- Designed and executed a visual stock portfolio analyser from scratch using Java 8, SpringBoot **REST API**, Gradle. Created the core logic using **DesignPatterns**, refactored the code to add support for multiple stock services. Improved the application stability and performance by **60%** by using **multi-threading**.

Event Driven Microservices — Spring Boot, Kafka, Elastic Search, Kafka Streams

[Click here](#)

- Used an elevated developer account on Twitter and integrated the twitter4j API to filter tweets based on specific keywords, storing them in a Kafka event store.
- Developed REST APIs along with **Open API** documentation, to fetch and validate data from Elasticsearch, enabling robust data retrieval based on API requests via Postman.
- Implemented **CQRS** pattern in microservices to independently develop, deploy, and scale services, leveraging **Docker** images for Kafka and Elasticsearch clusters.
