SOFTWARE QUALITY ASSURANCE ANALYST

Motivated quality assurance analyst with over 7 years experience in Manual Testing and 2 years experience in Automated Testing. Adept in testing in both web and mobile applications. Well versed in various SaaS niches from fintech, small to medium business, and beyond. Passion for testing, ensuring reliability in software applications, and identifying issues before they affect users. Thrives in fast pace start ups with quick application development life cycles in roles focusing on product support, software quality assurance testing, and user experience. Certified by the International Software Qualifications Board (ISTQB) as a Certified Foundation Level Tester.

STACK

PROFESSIONAL EXPERIENCE

AEGIS Hedging

Quality Assurance Analyst

Jul 2025 - Present

- Designed and executed manual and automated test cases for web application, tested functional and nonfunctional aspects of the platform, tracked defects and user stories using Azure DevOps
- Collaboration with developers during sprint planning and daily stand ups ensuring early detection of defects and team synergy
- Created, adapted, edited, and tested various regression suite cases at the end of each sprint leading to an overall decrease of regression related defects

BILL

Product Support Analyst

May 2021 - Jan 2025

- Designed and executed comprehensive test cases using standard testing methodology in an Agile environment
- Tracked defects and their severity using JIRA, collaborating with development to resolve defects
- Identified 50+ bugs resulting in overall software stability
- Tested product using manual testing through functional and nonfunctional testing methods
- Executed acceptance tests against all features in production release as part of regression testing

Homebase

Technical Support Product Specialist

Jul 2018 - May 2021

- Use of JIRA to document bug fixes/updates, deploys to production, changes to the UI within the product, new experiments or features, etc.
- Collaboration with product and engineering teams, point of contact for daily deploys, from staging to production
- Identifying any unusual trends for data purposes, collecting feedback, troubleshooting, and helping to develop technical procedures for a better user experience.
