SOFTWARE QA ENGINEER — Web & Mobile | API & UI Automation | Agile

Detail-oriented QA Engineer with 4+ years of experience ensuring high-quality web and mobile releases in Agile environments. Skilled in building lean, risk-based test strategies, combining exploratory and automated testing to accelerate release cycles without sacrificing quality. Recognized for analytical problem-solving, clear defect communication, and proactive collaboration with developers, PMs, and DevOps.

HIGHLIGHTS

- Reduced regression cycle time by 40% by implementing Cypress UI and Postman API automation across 20+ critical user flows.
- Improved feature acceptance rate by 25% by strengthening acceptance criteria, linking TestRail coverage.
- Increased device compatibility coverage to 100% by designing a cross-browser/device testing matrix using BrowserStack, emulators, and real Android/iOS devices.
- Resolved high-impact production defect by isolating caching conflict through Charles Proxy and SQL data tracing; implemented guard tests preventing recurrence.

CORE STRENGTHS

- Platforms (Windows, MacOS, UNIX/ Linux, iOS, Android OS)
- Mobile testing (Android Studio, Xcode, ADB, Charles Proxy)
- Manual UI/UX & Exploratory Testing
- API Testing (Swagger, Postman)
- UI Automation (Cypress)
- SQL Data Validation (Oracle/MySQL)
- Cross-Browser/Device (BrowserStack, real devices)
- Accessibility (WCAG)
- Software and test management (Jira/TestRail)

EXPERIENCE

06/2021 - Present

Software QA Engineer, Digital Orbit Solutions, Riverside, CA

E-commerce Platform (Cosmetology)

- Designed and executed 2,000+ test cases covering smoke, functional, and regression testing across multiple releases.
- Built and maintained Cypress UI automation for core paths, cutting manual regression time and improving early-sprint bug detection.
- Performed API validation via Postman (collections, schema contracts, environment variables) and SQL queries to confirm end-to-end data accuracy.
- Delivered cross-platform testing using BrowserStack, Android Studio, and Xcode—eliminating late-stage Safari/iOS defects.
- Authored high-signal defect reports with HAR files, logs, and video evidence, reducing mean-time-to-resolution by 30%.
- Collaborated with Product and Dev teams in Agile ceremonies to refine acceptance criteria and improve sprint predictability.

Sports Competition Management Platform

- Re-architected TestRail structure, introducing decision tables + mind maps to expose edge cases and expand coverage of complex scoring logic.
- Introduced Playwright automation for high-risk UI workflows, balancing automation and manual testing efficiency.
- Partnered with developers through GitLab issue tracking and continuous improvement meetings, reducing reopened tickets by 20%.
- Conducted periodic accessibility (WCAG) and performance checks, ensuring compliance and optimized user experience.

TOOLS & TECHNOLOGIES

Testing: Cypress, Playwright, Postman, TestRail, Jira, GitLab, BrowserStack, Charles Proxy, Android Studio, Xcode

Web/Code/Data: JavaScript, HTML5/CSS3, SQL (Oracle/MySQL), Swagger, DevTools

Practices: SDLC/STLC, Agile/Scrum, Risk-Based Testing, Exploratory Charters, Accessibility (WCAG), Cross-Browser/Device

EDUCATION

- Tripletén Bootcamp — Full-Stack Software Engineering (2022–2023)
- Kazan Federal State University — B.A. Sociology
