

Aaron Maupin

Senior Software Engineer

+1 650-781-5946 aaronmaupin01@gmail.com Augusta, GA

SUMMARY

Skilled Full-Stack Developer with extensive experience in developing and optimizing scalable web applications across healthcare, finance, and retail industries. Proficient in ASP.Net, Angular, React, and Blazor, with a strong focus on microservices architecture, secure data exchange, and cloud-based deployments. Adept at enhancing system performance through efficient database operations, caching strategies, and real-time data processing. Experienced in CI/CD, containerization with Docker and Kubernetes, and adhering to WCAG guidelines for accessible user interfaces. Committed to delivering high-quality, secure, and user-centric solutions that drive business success.

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer

United States

DigitalOcean

09/2024 - 02/2025

- Engineered high-performance microservices using C#/.NET Core, implementing CQRS and DDD to enhance system scalability and maintainability
- Developed enterprise-grade APIs with ASP.NET Core, gRPC, and GraphQL, ensuring robust and secure communication across distributed systems
- Built real-time web applications with SignalR and WebSockets, improving user engagement and responsiveness in financial dashboards
- Designed and implemented frontend architectures using React, Angular, and Blazor, optimizing performance and enhancing user experience with WCAG-compliant UI components
- Refactored monolithic applications into scalable microservices using .NET Core, Docker, and Kubernetes, leveraging gRPC and RESTful APIs for seamless service-to-service communication
- Integrated Azure Services such as Azure Functions, Azure Service Bus, and Azure Blob Storage to build cloud-native solutions for financial data processing
- Developed and deployed containerized applications with Docker and Kubernetes, orchestrating scalable workloads in AWS (EKS, Lambda, RDS) and Azure (AKS, DevOps Pipelines)
- Optimized database performance by implementing efficient indexing strategies, caching with Redis, and query optimization in MsSQL, MySQL, and PostgreSQL
- Implemented Infrastructure as Code (IaC) using Terraform and CloudFormation, automating deployment of cloud resources across AWS (EC2, S3, DynamoDB) and Azure (Virtual Machines, Storage Accounts, Key Vault) for high-availability financial systems
- Automated CI/CD pipelines using Jenkins, GitHub Actions, and Azure DevOps, accelerating deployment cycles while ensuring high code quality with NUnit, xUnit, and Jest testing frameworks
- Implemented secure authentication and authorization mechanisms using OAuth2, JWT, and Active Directory, ensuring compliance with financial security standards

Senior Software Engineer

United States

PatientPoint

07/2021 - 08/2024

- Developed and maintained scalable web applications using C#, Angular, and React to support healthcare management systems
- Implemented microservices architecture with ASP.NET Core, enhancing system modularity and maintainability
- Integrated RESTful APIs and gRPC services for secure and efficient data exchange between healthcare systems
- Leveraged Entity Framework Core for seamless database operations, optimizing query performance in SQL Server
- Optimized application performance by implementing caching strategies with Redis and SQL Server in-memory tables
- Utilized Angular's reactive forms and RxJS for dynamic, real-time patient data management interfaces
- Collaborated with UX/UI designers to create accessible, user-friendly interfaces, adhering to WCAG guidelines
- Designed and deployed e-commerce features for healthcare applications using WooCommerce, enabling secure payments and patient billing integration
- Automated testing with NUnit, xUnit, Jasmine, and React Testing Library, Jest, ensuring code reliability and reducing regression issues
- Deployed applications on Azure, utilizing Azure DevOps for continuous integration and deployment (CI/CD)
- Utilized Docker and Kubernetes for containerized deployments, improving application scalability and management
- Employed Azure Active Directory for secure identity management and Azure Blob Storage for handling large data files
- Implemented Infrastructure as Code (IaC) using Terraform and Azure Resource Manager (ARM) templates
- Designed and implemented message brokering with RabbitMQ, ensuring reliable and efficient communication between distributed services
- Worked with FHIR standards for interoperability between healthcare systems, enhancing data sharing capabilities

PROFESSIONAL EXPERIENCE

Full Stack Developer

TransUnion

United States

01/2018 - 06/2021

- Developed and maintained secure, high-performance financial web applications using C#, Blazor, Angular, and React
- Architected and developed microservices using C# and .NET Core, enhancing transaction processing efficiency
- Designed and implemented complex data visualization dashboards using React and D3.js, enabling real-time monitoring of financial metrics
- Integrated Angular's state management (NgRx) for efficient handling of large datasets and dynamic user interfaces
- Built RESTful APIs and GraphQL services to streamline communication between frontend and backend systems
- Implemented secure authentication mechanisms using OAuth2, JWT, and Active Directory, protecting sensitive financial data
- Employed Agile methodologies, CI/CD pipelines, and automated testing (Xunit, NUnit, Jest) to ensure rapid development cycles
- Collaborated with cross-functional teams to integrate third-party financial services, APIs, and cloud-based solutions
- Applied modern DevOps practices using Docker and Kubernetes for containerization and orchestration
- Managed version control using Git, facilitating collaborative development, code reviews, and efficient release management
- Designed and implemented e-commerce solutions using Magento, Shopify, facilitating secure online transactions and product management
- Customized and extended DotNetNuke (DNN) modules to support financial reporting features, improving client management and transaction tracking capabilities
- Integrated AWS Lambda for serverless computing tasks and AWS SQS for reliable message queuing and processing

Web Developer

FlexMade

United States

07/2016 - 12/2017

- Designed and implemented RESTful APIs using C#, ASP.NET MVC, and Web API, optimizing system performance and scalability for e-commerce applications
- Developed a microservices architecture for order processing and inventory management, leveraging Docker for containerization and Kubernetes for orchestration
- Improved database performance by optimizing queries and schema design in SQL Server and MySQL, increasing transaction processing speed by 30%
- Integrated popular third-party payment gateways (e.g., Stripe, PayPal) and fraud detection services, ensuring secure and seamless transactions
- Implemented real-time updates for product availability and user notifications using SignalR, WebSockets, and Azure Service Bus, enhancing user experience
- Built responsive and dynamic user interfaces with jQuery, TailwindCSS, Bootstrap, and SASS, delivering a fluid and modern shopping experience
- Designed client-side features with real-time inventory updates and personalized product recommendations using JavaScript, jQuery, and React
- Used xUnit, NUnit, and Jest for unit and integration testing, achieving over 85% code coverage and ensuring high-quality software
- Applied Dependency Injection (DI) and Repository Pattern for maintainable, testable, and scalable code
- Leveraged Domain-Driven Design (DDD) principles and CQRS for managing complex business logic and improving maintainability
- Implemented client-side caching and lazy loading techniques using Webpack and React Router, significantly enhancing page load speeds and overall site performance
- Customized DotNetNuke (DNN) modules and extended CMS functionality with JavaScript and jQuery for flexible content management
- Integrated and managed custom modules for Magento and Shopify, including payment gateway setup, inventory management, and product catalog customization
- Deployed scalable web applications using AWS Elastic Beanstalk, AWS Lambda, and integrated AWS DynamoDB for efficient NoSQL data storage and real-time updates

EDUCATION

Bachelor of Science, Computer Science

Augusta University

Augusta, GA

01/2012 - 05/2016

SKILLS

C#, Javascript, Typescript, SQL, HTML/CSS, Python, .Net Core, ASP.NET MVC, Blazor, DotNetNuke, Angular, React, jQuery, D3.js, Microservices, RESTful APIs, gRPC, GraphQL, DDD, CQRS, MVC, DI, SQL Server, MongoDB, Redis, PostgreSQL, Azure, Azure DevOps, Azure Service Bus, Azure Functions, Azure Blob Storage, Azure Active Directory, AWS, EC2, S3, RDS, Lambda, DynamoDB, Elastic Beanstalk, CloudFront, SQS, CloudFormation, Docker, Kubernetes, Terraform, CI/CD, Jenkins, Git, NUnit, xUnit, Jasmine, Jest, Selenium, Postman, OAuth2, JWT, Active Directory, FHIR, Agile, WCAG, SignalR, RabbitMQ, SharePoint
