

ALEXSHA JAMES

SENIOR .NET SOFTWARE ENGINEER

alexsha@gmail.com | 801-721-1352 | Millville, UT | [linkedin.com/in/alexshajames](https://www.linkedin.com/in/alexshajames)

SUMMARY

Dynamic Senior Software Engineer with extensive experience at Descartes Systems, specializing in C#, ASP.NET, and Microsoft SQL Server. Proven track record in enhancing software performance and orchestrating large-scale deployments. Adept in Agile methodologies and CI/CD practices, combining technical expertise with strong leadership skills to drive innovative solutions.

WORK EXPERIENCE

Descartes Systems (USA) LLC / CustomsInfo Principal/Senior Software Engineer	<i>November 2013 - November 2024</i>
• Oversaw software maintenance for a diverse client base of over sixty national and international clients. • Developed software using C#/ASP.NET for CustomsInfo CIManager—a collaborative, web-enabled classification system that provides trade and customs data to help importers and exporters automate their trade processes. • Integrated additional functionalities into current software written in ASP.NET/VB.NET. • Enhanced performance of web applications by leveraging Microsoft SQL Server for optimized data management. • Engineered new software solutions to enhance the management of CIManager instances. • Orchestrated deployment of software on a large scale, ensuring extensive feature testing.	
Beijer Electronics, Inc. Senior Software Engineer	<i>November 2012 - November 2013</i>
• Development of software for testing functionality and quality of human machine interface (HMI) and mobile data terminal (MDT) device production using C#/.NET, C++, WPF and .NET Compact Framework.	
Residential RealEstate Review .NET Software Engineer	<i>March 2012 - November 2012</i>
Market Data Service LLC .NET Software Engineer	<i>July 2011 - March 2012</i>
Utah Transit Authority .NET Software Engineer	<i>March 2009 - January 2012</i>

EDUCATION

Seattle University Bachelor of Science - Computer Science and Software Engineering	Seattle, WA
--	--------------------

SKILLS

• Languages & Frameworks ○ C#, VB.NET, .NET Framework, .NET Core, .NET ○ JavaScript, TypeScript, jQuery ○ T-SQL, MySQL, NoSQL • Web & API Development ○ ASP.NET (Web Forms & MVC), RESTful API Design ○ REST, JSON, XML, SOAP • Cloud & DevOps ○ Azure DevOps (Pipelines, Repos, Boards) ○ Azure Service Bus, Azure Messaging Queues ○ CI/CD Practices	• Data Access & Backend ○ Microsoft SQL Server, Entity Framework, LINQ ○ High-performance data processing & optimization • Desktop Development ○ WPF, .NET Compact Framework, C++ • Software Engineering Practices ○ Full Stack Development ○ Agile (Scrum), SDLC ○ Large-scale system deployment & integration

PROJECTS

CIManager, SaaS, Customs & Duties Classification	<i>2013 - Fall 2024</i>
High performance transfer of customer product data for processing and classification, allowing for the use in logistics to provide customers with accurate costs and meeting legal requirements for countries around the world. In developing the system, we needed to create optimizations for the transfer and processing of hundreds of millions of records. In total, our systems contained billions of records used to classify customer data to minimize errors in dealing with customs and duties during product importing and exporting. We created lookup engines and rules engines to provide users with an optimal experience in the system, minimizing their time spent on individual tasks.	
Customs Classification Suite (CCS) & CIManager Connector, SaaS	<i>2022 - Fall 2024</i>
Mission critical data connector between next-generation Customs Classification Suite (CCS), and CIManager, allowing for real-time syncing of data between systems. Leveraging Azure Messaging Queues, the connector kept the two systems in sync, allowing customers to work with data in multiple interfaces during the development of CCS.
