[krishnan-s-3ba765266](https://www.linkedin.com/in/arun-krishnan-s-3ba765266)

Highly skilled and motivated Full Stack Developer with expertise in .NET Core, ASP.NET, ASP.NET MVC, C#, Angular, HTML, CSS, and jQuery. Proficient in database management systems including SQL Server, Postgres SQL, Oracle, and Informix. Experienced in developing cloud-based applications using Google Cloud Platform (GCP). Seeking a challenging position to contribute my technical and problem-solving skills to the success of a dynamic organization.

Professional Summary

- **13 Years** of experience in **Analysis, Design & Code Development, Debugging & Diagnostics, testing and deployment** of small to enterprise software solutions
- A proven Microsoft .NET Developer in delivering highly performing and secured applications to solve complex business problems including **Web based systems, windows-based systems** using **C#/ASP.NET/ASP.NETCORE/ASP.NETMVC/WCF/WEBAPI/Microservices/.NET-Framework 4.5,4.0,3.5,3.0,2.0**
- Developed **microservices-based applications** using **.NET Core** and **ASP.NET Core**, leveraging industry best practices and design patterns.
- Demonstrated expertise in applying microservices architectural principles, ensuring separation of concerns, scalability, and fault tolerance.
- Successfully implemented **RESTful APIs** to facilitate seamless communication between microservices and external systems.
- Utilized containerization technologies like **Docker** and proficiently managed microservices deployments and orchestration using **Kubernetes**.
- Integrated **RESTful APIs** with front-end technologies such as **Angular, HTML, CSS**, and **jQuery** to create robust and responsive user interfaces.
- Collaborated closely with DevOps teams to establish effective Continuous Integration and **Continuous Deployment (CI/CD) pipelines**, employing tools like **Jenkins** and **Octopus Deploy**.
- Developed custom Jenkins Pipelines using **Groovy Script** to automate build, testing, and deployment processes.
- Over 15 years of experience in analyzing to-date industry trends, guiding developers, conducting code reviews.
- Experienced in full **Software Development lifecycle** (SDLC) from Requirement Analysis, Design, Development, Testing, Maintenance, Enhancements and Production Support.
- Experienced in defining standards, implementing **patterns & practices**, recommendations to infrastructure.
- Experience handling multiple projects simultaneously.
- Expertise in developing **web and windows-based** applications in **C#, XML, XSLT, LINQ, HTML, CSS, JavaScript, jQuery, AJAX, JSON, WCF and ADO.NET**.
- Experience working with .NET frameworks starting **.NET 2.0** through **.NET 4.5**, expertise in re-writing applications utilizing the capabilities of later frameworks.

- Expertise working with multiple SQL back-ends 10 Years in **MS SQL/T-SQL**, 4 Years in **Oracle/PL-SQL, Informix** including creating Packages, Stored Procedures, constraints, Views, Functions, triggers, sequences.
- Experience in Test Driven Development using **IoC** and **Mocking** frameworks
- Experience working in projects running on **Agile SCRUM & Kanban**.
- Over 1 Year of experience in owning product deployments to various user environments through production, deployment support to Application support groups.
- Experienced negotiator on behalf of the development team in meeting business units & stakeholders for understanding, proposing and committing requirements
- Experience managing tasks, user stories, test cases using **Team Foundation Server 2015** and **Atlassian JIRA**.
- Experience preparing functional, technical & design documentation including **Microsoft Visio, Lucid chart** preparing architecture documents, proof of concepts, Functional & Technical Impact documents
- Identifying and suggesting areas of improvement, redesigning of applications/tools for better user experience and performance.
- Experience in managing remote teams and in distributed development
- Have experience in source controlling using Team Foundation Server and source branching strategies
- Ability to handle multiple teams, bringing new developers up to speed and proven capability managing tasks in challenging deadlines
- Have expertise in Project planning, estimation and scheduling.
- Implemented innovative solutions and tools over existing business problems, organized innovation drives at organization level proving the leadership qualities.
- Expertise in Finance & Banking, Retail, Electronics, Inventory, Purchase & Sales and Plantation

Technical Skills

Programming Languages	C#, VB.Net,
Web Technologies	ASP.NET, ASP.NET MVC, ASP.NET Core, Web API, Java Spring Boot, Angular, HTML, CSS, jQuery, JavaScript
Databases	SQL Server, Postgres SQL, Oracle, Informix
Cloud Technologies	Google Cloud Platform (GCP)
Development methodologies	Agile SCRUM, Kanban, Extreme Programming (XP), Waterfall
Design, Patterns & Practices	MVC, MVP, REST, DI, IOC, DRY Principle, Singleton, SOLID Principles
Version Control	Git, GitHub, Bit Bucket, TFS, VSS
Tools & Utilities	Visual Studio, IntelliJ, VS code, PyCharm, Postman, Soap UI, Pylint, ReSharper, Dot-Trace
Testing Frameworks	X-Unit, N-Unit, Moq
CI/CD	Jenkins, Octopus Deploy
Operating Systems	Windows, Linux

Professional Experience

Employer : UST Global
Client : Equifax Workforce Solutions
Location : Maryland Heights, STL-MO
Role : Full stack Web developer/Cloud Developer
Duration : 12/12/2017 to Till Date

- Developed and maintained full-stack web applications using ASP.NET, ASP.NET MVC, and .NET Core.
- Designed and developed microservices-based applications using .NET Core and ASP.NET Core.
- Applied microservices architectural principles, including separation of concerns, scalability, and fault tolerance.
- Implemented RESTful APIs for communication between microservices and external systems.
- Utilized containerization technologies such as Docker and orchestration tools like Kubernetes to deploy and manage microservices.
- Implemented RESTful APIs and integrated them with front-end technologies such as Angular, HTML, CSS, and jQuery.
- Worked closely with DevOps teams to implement Continuous Integration and Continuous Deployment (CI/CD) pipelines for using Jenkins and Octopus Deploy.
- Worked on creating Custom Jenkin Pipelines using Groovy Script
- Utilized Java Spring Boot to develop scalable and robust back-end systems.
- Designed and optimized database schemas using SQL Server, Postgres SQL, Oracle, and Informix.
- Worked closely with cross-functional teams to gather requirements, define project scope, and deliver high-quality software solutions.
- Implemented and maintained secure authentication and authorization mechanisms.
- Deployed applications to the Google Cloud Platform (GCP) and leveraged its services for scalability and performance improvements.
- Collaborated with stakeholders to identify and address technical issues, ensuring smooth functionality and optimal user experience.
- I actively participated in code reviews and provided constructive feedback to improve code quality and maintainability.
- Resolved bugs and performed regular testing to ensure the reliability and stability of applications.
- Kept up to date with emerging technologies and trends in the software development industry, proactively suggesting improvements to existing systems and processes.

Projects

Tax Form Management

Tax Form Management is a collection of interface and support applications to perform various tasks. The following are the main applications in the Tax Form management project. The Inventory of Applications in TFM are: -

- Tax Form management - The Tax Form management application is a public web application aims for automating Tax forms related services in an organization.
- W2Account Manager -Which is an internal web application used by the implementation manager for setting up the configuration for a particular employer.
- Load File Manager – Which is a Windows application used by Equifax Workforce Solutions for uploading W-2 related data to the system.
- W2 Mailer - Which is an internal application (Executable) used by the Equifax Workforce Solutions employees for processing the online requests for W-2.
- W2 Campaign Service - is an application used to generate the list of employees for sending campaign emails.
- W2-OFX – Tax partners consume this service to pull the employee's tax details to file the tax.

Tech Stack: ASP. Net, Angular, Postgres SQL, jQuery, C#, Rest Api, MS-Test, Moq

Paperless Pay (PPAY)

Paperless Pay (PPAY) –Web Application offered by Equifax Corporation to employers for providing payroll, direct deposit, W4 for their employees. We receive multiple file feeds from the employer containing payroll, direct deposit and/or W4 updates.

Applications in PPAY are: -

- Paperless pay- This is a public web application that aims for automating payroll related services in an organization.
- ePayroll AMI -Which is an internal web application used by the implementation manager for setting up the configuration for a particular employer.
- InteractiveW4 – It offers both Federal and State/Local W4 forms in a digital manner without filling out paperwork with the clients. W4 forms are updated in an interactive mode. This can be configured in the AMI Application Third party vendor Symmetry provides the W4 forms, which is integrated into Paperless Pay application. The details updated by the employee are stored in the database and sent to the employer as data files.
- PPAY - Cloud Loader - Which is a Windows application used by Equifax Workforce Solutions for uploading payroll data to the system.

Tech Stack: ASP. Net, Angular, Postgres SQL, jQuery, C#, Java, Rest Api, MS-Test, Moq

Employer : UST Global
Client : Equifax Workforce Solutions

Location : Trivandrum, Kerala, India
Role : Full stack developer
Duration : 10/31/2011 to 12/17/2017

Projects

1) CaseBuilder

Case Builder is an Equifax Service and is a part of The Unemployment Compensation Management suite of applications. It allows clients to answer state required questions about a former employee's separation via the web. A client user can also appeal a state decision, view favorable decisions and prepare for a hearing.

2) Unemployment Claims

Description: The Unemployment Claims (UC) Program provides workers who lose their jobs through no fault of their own, with partial wage replacement (weekly/biweekly) while they conduct an active search for new work. Employers who pay taxes on wages paid to employees fund the UI program. The client has a set of batch applications, which runs based on the predefined configurable scheduler. The goal of the batch application is to apply business rules to validate the incoming data and determine how a claim must be handled. These claim records are processed to aid in decision making.

Tech Stack: Python, Asp. Net, C#, Informix, SQL Server, Postgres SQL, Asp. Net MVC, jQuery, REST, JavaScript, jQuery, N-unit, Moq

Responsibilities:

- Analyzed the existing business operations; Defined functional and technical requirements for projects.
- Analyzed the various project requirements and transferred the knowledge to team.
- Estimated the effort required for each task.
- Performed requirement analysis, design, construction, configuration, data migration, testing, user training, and roll out.
- Provided necessary support to the team in executing the projects, which involved identifying key areas related to the project and transferring knowledge to plug in any gaps and providing support for testing.
- Provided project and metric reports to the managers.
- Attended the regular client call/meetings and updated the status with the client.
- Independently performed the Root Cause Analysis on issues occurring across different environments.

- Provided solutions for improving the client's business and processes.
- Participated in training/sessions on new process/tools used in the projects.

Personal Information

- **Full name:** Arun Krishnan Somasekharan Nair
- **Citizenship:** India
- **Education: B.Tech. (Computer Science and Engineering)-** Cochin University of Science and Technology (CUSAT)
- **Work Status: H1B Visa-I-140 approved**
