

AUSTEN ANOP

Senior Full Stack Engineer | C# | .NET | ASP.NET Core | Cloud solutions (AWS & Azure)

Spring, TX | 7327163796 | anopausten76@gmail.com | www.linkedin.com

SUMMARY

Senior Full Stack Engineer with over a decade of experience architecting and delivering large-scale, distributed backend systems across finance, healthcare, and SaaS domains. Expert in designing resilient microservices using **.NET Core**, **C#**, and **cloud-native technologies** within **Azure** and **AWS** environments. Proven track record of optimizing high-throughput APIs, implementing event-driven architectures, and automating scalable **CI/CD pipelines**. Highly proficient in **CQRS**, **DDD**, and **DevOps** practices to build fault-tolerant, maintainable platforms. Recognized for elevating engineering standards, mentoring cross-functional teams, and driving high-impact backend initiatives from concept to production in complex, regulated ecosystems.

SKILLS

Frontend Development: Angular, React, TypeScript, JavaScript, RxJS, Redux, SCSS, Tailwind CSS, HTML5, Bootstrap, Responsive Design, Component Libraries

Backend Development: C#, .NET Core, .NET Framework, ASP.NET MVC/Web API, REST APIs, GraphQL, Entity Framework, LINQ, Background Services (Hangfire, Azure Functions)

Database: SQL Server, MongoDB, MySQL, PostgreSQL, DynamoDB

Cloud & DevOps: Azure, AWS (Lambda, S3, DynamoDB), Azure DevOps, Docker, Kubernetes, CI/CD Pipelines, Jenkins, Git

Architecture & Practices: Microservices, Event-Driven Architecture, Distributed Systems, Serverless Architecture, Agile/Scrum, SOLID Principles, Clean Code

PROFESSIONAL EXPERIENCE

Senior Full Stack Engineer

First Line Software | Remote, US | July 2022 - Mar 2025

- Architected and deployed a containerized **microservices architecture** using **.NET Core**, **Docker**, and **Kubernetes**, enabling fault-tolerant services with modular deployments and reducing system downtime by 30%.
- Engineered high-performance **RESTful** and **gRPC APIs** with **optimized serialization**, **Redis caching**, and **compression**, reducing average response time by 45%.
- Established domain-driven design with **CQRS** and **MediatR**, enhancing system scalability and maintainability across a complex enterprise codebase.
- Designed and integrated a real-time event-driven architecture with **RabbitMQ**, **Azure Event Grid**, and **Kafka**, increasing messaging throughput by 60% and reducing system latency.
- Automated **CI/CD pipelines** with **Azure DevOps**, **Helm**, and **Terraform** for containerized deployments, enabling blue-green releases and reducing release errors by 60%.
- Engineered robust background processing with **Hangfire** and **Azure Functions**, optimizing scheduled jobs and boosting batch processing efficiency by 40%.
- Architected and deployed a real-time messaging framework with **Redis Pub/Sub** and **Azure Event Grid**, enabling asynchronous large-scale transaction processing with sub-second latency to support mission-critical operations.
- Automated CI/CD delivery workflows using **Azure DevOps**, cutting deployment time in half and ensuring consistent, error-free releases with minimal downtime.

Full Stack Engineer

Wizard Innovations US | Remote, US | May 2020 - June 2022

- Led the migration of legacy monolithic **.NET apps** to a cloud-native **microservices architecture** using **.NET Core** and **Kubernetes**, improving scalability and reducing rollback failures by 75%.
- Developed high-throughput backend services using **gRPC** and **REST APIs**, implementing **throttling**, **rate limiting**, and **multi-tiered caching**, reducing peak latency by 40%.
- Optimized **SQL Server & MongoDB queries**, reducing data retrieval times by 50% using **query indexing**, execution plan tuning, and **Dapper** for lightweight ORM operations.
- Implemented scalable data access patterns using **CQRS** with **MediatR** and **Command Handlers**, improving modularity and reliability in a distributed service environment.

- Strengthened system resilience by integrating Polly-based retry and fallback mechanisms, reducing failure propagation by 60% in multi-service environments.
- Built distributed messaging workflows with **RabbitMQ**, **Kafka**, and **Azure Event Grid** to support real-time synchronization of user events across 20+ microservices.
- Designed and deployed **AWS infrastructure** as code (IaC) using **Terraform** and **AWS CloudFormation**, reducing manual infrastructure provisioning by 80%.
- Trained and mentored junior developers, conducting code reviews, architectural discussions, and best practices workshops on **.NET Core performance optimizations**.
- Integrated **AWS Lambda** and **DynamoDB** to offload compute-heavy operations, enabling a **scalable serverless architecture** that reduced infrastructure costs by 30%.

Full Stack Engineer

Switch Technologies | Onsite, US | Oct 2018 - May 2020

- Designed and developed high-throughput transaction processing systems in **.NET/C#**, supporting millions of daily operations with 99.99% uptime and sub-second latency.
- Built resilient distributed **microservices** using **CQRS**, **MediatR**, and **DDD**, enabling modular deployments and seamless service scalability.
- Refactored and optimized SQL Server stored procedures and **indexing strategies**, **implementing partitioning**, **indexing improvements**, and **query execution plan tuning**, reducing query latency by 40%.
- Architected a scalable, real-time messaging system using **RabbitMQ**, **gRPC**, and **Azure Event Grid** to enable asynchronous synchronization across 15+ microservices.
- Implemented layered caching strategies with **Redis** and **MemoryCache**, cutting redundant DB queries and boosting API speed by 50%.
- Designed optimized data retrieval layers to minimize payload size and improve communication efficiency in distributed backend services.

Full Stack Engineer

C.T.S. CompuPro | Remote | Feb 2017 - Sep 2018

- Architected and developed a **multi-tenant ERP backend system** using **.NET/C#**, streamlining operations across multiple business units and boosting process efficiency by 40%.
- Designed a **domain-driven design (DDD) architecture**, implementing **CQRS** with **MediatR**, **dependency injection (DI)**, and **Clean Architecture principles**, improving code modularity and testability.
- Built and optimized complex SQL Server queries, improving transaction processing times by 45% through **indexing strategies**, **execution plan optimization**, and **table partitioning**.
- Engineered multi-threaded background workers with **Hangfire** and **Windows Services**, automating invoicing and reporting while improving task execution time by 50%.
- Developed a comprehensive authentication and authorization framework, integrating **OAuth2**, **JWT**, **Active Directory (LDAP)**, and **Role-Based Access Control (RBAC)** to ensure granular security policies.
- Fine-tuned **.NET Core** memory management and **GC behavior**, minimizing heap pressure and improving request throughput by 30% under peak loads.
- Integrated critical third-party services (**Stripe**, **Twilio**, **SharePoint**) into backend architecture, enabling secure payment, communication, and document workflows.

Full Stack Engineer

Fortella | Remote | Apr 2014 - Jan 2017

- Engineered and maintained backend systems for financial and healthcare domains, ensuring data consistency, system reliability, and regulatory compliance across mission-critical applications.
- Modernized legacy **.NET** systems by migrating **WebForms** to **MVC architecture**, reducing tech debt and enhancing maintainability by 35%.
- Implemented a financial reconciliation engine, using **multi-threading**, **parallel processing**, and **data batching**, **ensuring real-time transaction accuracy** and compliance with financial regulations.
- Optimized SQL Server performance, reducing query execution times by 50% through advanced indexing, materialized views, and execution plan analysis.
- Designed event-driven workflows with **RabbitMQ** and **Windows Services**, enabling real-time processing of high-volume business events with increased system reliability.
- Implemented OAuth2-based authentication and fine-grained access control, ensuring compliance with **HIPAA**, **GDPR**, and **PCI-DSS** security standards.

EDUCATION

Bachelor of Computer Science

University of Texas at Dallas | Jun 2013 - Dec 2016

- Focused on software architecture, data structures, and web development
