

Brandon Cain

SENIOR SOFTWARE ENGINEER

Macon, GA | 470.480.3221 | brandoncain0428@gmail.com | [LinkedIn](#)

Summary

Senior Java Software Engineer with 9+ years building enterprise applications across healthcare, telematics, ecommerce, and AI domains. Expert in Java/Spring ecosystem with proficiency in Angular, React, and mobile development. Demonstrated success designing microservices, implementing AI solutions, and leveraging cloud platforms to deliver scalable systems. Combines backend architecture with responsive frontend design to create secure applications that drive operational efficiency and business growth

Experience

PreScouter, Inc. | Senior Software Engineer

Mar 2023 – Present

- Led migration of healthcare data exchange platform from monolithic PHP/MySQL architecture to HIPAA-compliant Java Spring Boot microservices with Angular frontend, improving system reliability and enabling secure transmission of patient records between 30+ healthcare providers
- Transformed PHP-based patient identification scripts into a robust identity management solution using Java, AWS Cognito, and machine learning-based matching algorithms, achieving 99.99% accuracy in patient matching across disparate healthcare systems
- Directed cross-functional team of 6 engineers, establishing coding standards and conducting knowledge-sharing sessions that improved team velocity by 25%
- Designed and developed high-performance ecommerce platform using Java Spring Boot and React, handling 50,000+ concurrent users and \$2M+ in daily transactions
- Created responsive product catalog and shopping cart system using React, Redux and TypeScript with server-side rendering that improved page load times by 62%
- Implemented real-time inventory management with Java WebSockets and Redis pub/sub, ensuring accurate stock levels across distributed warehouse systems
- Engineered mental health chatbot using Python, FastAPI, and LLMs with vector database for RAG, achieving 92% user satisfaction and 35% improved response accuracy
- Designed secure conversation memory systems using PostgreSQL and Redis that maintained context across user sessions while ensuring HIPAA compliance
- Implemented monitoring with ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, and Grafana, reducing incident response time by 40% and providing real-time system metrics
- Collaborated with business stakeholders to align technical solutions with business goals, effectively communicating complex concepts and incorporating feedback to ensure high user adoption
- **Technologies Used:** Java 17, Spring Boot, Spring Data, Python, FastAPI, LangChain, React, Redux, TypeScript, Angular, Tailwind CSS, AWS (EC2, Lambda, DynamoDB, S3, Cognito, RDS), Redis, PostgreSQL, Docker, Kubernetes, OpenAI API, Jenkins, Selenium, Jest, PyTest, Junit, ELK Stack

GPS Insight | Senior Software Engineer

Jan 2021 – Feb 2023

- Led development of a Java Spring Boot-based vehicle maintenance prediction system using IoT sensor data and predictive analytics, reducing fleet maintenance costs by 28%
- Designed and implemented a driver safety monitoring platform with Java microservices architecture, processing telemetry data to generate real-time safety scores for 50,000+ drivers
- Architected a scalable event-driven system using Spring Cloud Stream and Apache Kafka to process 3+ million daily geolocation events with sub-second latency

- Developed a fleet management mobile application using Kotlin and Android Jetpack, featuring offline synchronization capabilities and real-time vehicle tracking that improved field technician efficiency by 40%
- Created a responsive fleet analytics dashboard using Next.js with server-side rendering, providing fleet managers with actionable insights that improved route efficiency by 22%
- Implemented a secure authentication system using Spring Security, OAuth2, and JWT tokens to protect sensitive fleet and driver data across web and mobile applications
- Designed and optimized PostgreSQL database schemas and queries for geospatial data storage and retrieval, improving query performance by 45%
- Set up GCP infrastructure using Terraform, leveraging Google Kubernetes Engine, Cloud SQL, and Cloud Pub/Sub to ensure high availability and fault tolerance
- Established CI/CD pipelines with Cloud Build and Container Registry, enabling automated testing and deployment that reduced release cycles from weeks to days
- **Technologies Used:** Java 11, Spring Boot, Spring Cloud, Spring Security, Kotlin, Android Jetpack, React, Redux, Next.js, PostgreSQL, GCP (GKE, Cloud SQL, Cloud Pub/Sub, Cloud Storage, Cloud Monitoring), Apache Kafka, Docker, Kubernetes, Cloud Build, JUnit, Mockito, Gradle, Git

Equifax | Software Developer II

Jun 2015 – Dec 2020

- Developed and maintained credit data processing applications handling over 10 million daily records using Spring Framework and Angular, improving system efficiency by 30%
- Built RESTful APIs using Spring MVC and Java Servlets for the consumer dispute resolution system, ensuring 99.9% uptime for critical customer-facing functions
- Implemented robust Java backend services utilizing multithreading and concurrent processing to optimize batch data operations across credit reporting systems
- Migrated critical credit processing applications to AWS cloud infrastructure, leveraging EC2, S3, and RDS for improved scalability and disaster recovery capabilities
- Engineered JPA/Hibernate for ORM data access layers, improving database interaction efficiency and maintainability
- Collaborated with database administrators to optimize Oracle SQL queries and implement Redis caching strategies, reducing API response times by 35%
- Created comprehensive unit and integration tests using JUnit and Mockito, increasing code coverage from 60% to 90% and improving overall system stability
- Utilized Jenkins CI/CD pipelines and Docker containers to streamline deployment processes and ensure consistent environments
- Participated in daily stand-ups, sprint planning, and retrospectives as part of Agile Scrum development methodology using JIRA and Confluence
- **Technologies Used:** Java 8/11, Spring Framework, Spring MVC, Spring Security, JPA/Hibernate, Angular, JavaScript, TypeScript, HTML5, CSS3, Oracle, SQL, REST APIs, JUnit, Maven, Git, Jenkins, SonarQube, Hibernate, Apache Kafka, Docker, AWS (EC2, S3, RDS)

Education

Georgia State University | Bachelor of Computer Science

Aug 2011 – May 2015

Major: Software Engineering | Minor: Artificial Intelligence

Certifications

- AWS Certified Cloud Practitioner
