WORK EXPERIENCE

Software Test Engineer Intern

May 2024 – Aug. 2024

Cook Medical LLC.

Bloomington, IN

- Architected automated testing framework from zero to one, transitioning the department from manual to automated testing with JavaScript and Grafana's k6, while integrating Postman for API validation.
- Modularized test scripts and generated automation logs, saving 15% of testing and debugging time.
- Performed API and UI load testing, simulating 100+ concurrent users and identifying performance bottlenecks, reducing peak load response times by 20%.

Software Automation Engineer

May 2021 – Mar. 2022

Shopee Pte. Ltd.

Taipei, Taiwan

- Spearheaded the development of automated test cases across 15+ countries, reducing manual testing by 60% and increasing automated test coverage by 30%.
- Reduced regression testing time by 10% and user error rate by 17% through the automation of pre-condition tools and customized functions.
- Transformed testing strategies by introducing automated API testing with Python, Selenium, Appium, and Postman, achieving a 90% automation success rate and improving test accuracy by 20%.

PROFESSIONAL SKILL

Python, JavaScript, Java, SQL, Git, Selenium, Appium, Postman, Jira, k6, Load Testing, API Test, Regression Test, Automation, Linux, Windows systems, Database

EDUCATION

University of Wisconsin – Madison

Sep. 2022 – Dec. 2024

M.S. in Information (GPA: 3.67 / 4.0)

Madison, WI

Professional Capstone Certificate Program in Computer Science (Sept. 2022 – May 2023)

Fu Jen Catholic University

Sep. 2016 – Aug. 2019

B.S. in Computer Science and Information Engineering (GPA: 3.67 / 4.0)

New Taipei City, Taiwan

Fukuoka University Exchange Program full scholarship recipient, awarded to top 1% of students (2019).

PROJECT

Machine Learning for Automatic Roll Call System

- Combined and modified three different algorithms to reinforce 8% accuracy of LBPH (Local Binary Patterns Histograms) for facial recognition and 13% accuracy of eyeblink detection.
- Improved fingerprint verification by 26% of efficiency by reducing redundant calculation steps.

Computer Network for Virtual Router Implementation

- Developed a virtual router to identify route table entries for IP addresses, ensuring network interactivity with integrated ICMP error handling, dynamic ARP resolution, and RIP-based routing.
- Enhanced a Java-based simple DNS server that performs recursive DNS resolutions and annotates IP addresses.

Database Management for Best Living Location Recommender

- Led project to construct ER and schema models, implementing MySQL database infrastructure for storage and retrieval of data from 20,000+ dynamic sources.

Decentralized Application for Gambling Game

- Developed a decentralized gambling DApp combining rock, paper, scissors and raffle games.
- Leveraged Ethereum blockchain, Solidity smart contracts, and web3.js for functionality.
- Managed deployment on AWS EC2 and integrated ERC20 tokens for secure in-game transactions.
