Summary

I am a seasoned backend engineer with 13 years of experience designing enterprise solutions and scalable backend services.

While **Java** and **C#** have been my primary language, I have also built expertise in **Spring frameworks, microservices, cloud infrastructure, and standalone services.**

I have led and delivered several high-impact projects, focusing on **architectural design, performance optimization, database management, and server operations.**

Beyond Java and C#, I am skilled in **JavaScript, Python, PHP, and Kotlin**, bringing versatility to my work. As a team lead, I have **overseen the full development lifecycle of large-scale projects**—from planning and documentation to deployment and ongoing maintenance. I thrive on problem-solving, improving client satisfaction, mentoring junior developers, and bridging the gap between technical and non-technical teams.

I am always looking for challenging projects where I can apply my expertise while exploring emerging technologies like **AI**. I **value hands-on experience and practical solutions over just following trends**, making a lasting impact wherever I work.

Professional Experience

Tyler Technologies Inc.

Plano, Texas

Lead Software Engineer

Oct 2020 – Jan 2025

- Led a migration from **Java** to **C#**, transitioning backend enterprise services from **Spring Boot** to **ASP.NET Core**, improving maintainability and performance.
- Upgraded critical backend components for **Munis ERP** and its plugins, optimizing workflows and enhancing data integrity across **financial and government applications.**
- Developed and optimized API integrations for third-party services, ensuring seamless communication between **Munis ERP modules** and external vendors.
- Implemented advanced caching strategies using **Redis, client-side caching mechanisms, and CDN optimizations**, resulting in 40% faster data retrieval.
- Designed a scalable event-driven architecture with **Kafka** and **RabbitMQ**, enabling real-time data synchronization across distributed services.
- Built a centralized logging and monitoring solution using **Application Insights** and **ELK Stack**, allowing proactive detection of anomalies and improving system observability.

- Enhanced authentication mechanisms by integrating **OAuth2** and **OpenID Connect**, strengthening security across internal and external APIs.

Cognizant Technology Solutions Corp.

Teaneck, New Jersey

Senior Backend Engineer

Sep 2014 – Jul 2020

- Developed enterprise-grade **Java backend services** using **Spring Boot**, **Spring Cloud**, and **Spring Security**, ensuring scalability and fault tolerance.
- Designed and implemented **microservice architectures**, leading the transformation from monolithic applications to distributed, containerized services using **Docker** and **Kubernetes**.
- **Redesigned critical system components from scratch**, implementing **real-time active service monitoring**, **dynamic load balancing**, and **fault-tolerant mechanisms** to maintain 99.99% uptime.
- Developed optimized caching strategies with **Redis**, **Memcached**, and **HTTP-level client caching**, reducing server load by 35% and improving response times.
- Integrated microservices with enterprise databases such as **PostgreSQL**, **MongoDB**, and **Cassandra**, ensuring high availability and efficient data retrieval.
- Led API design for high-performance **GraphQL** and **RESTful services**, improving frontend-backend communication efficiency.
- Implemented event-driven architecture using **Kafka** for seamless asynchronous processing of high-volume transactional data.
- Worked extensively with **Spring Frameworks** (**Spring Boot**, **Spring Data**, **Spring Security**) to build scalable, secure, and maintainable applications.
- Conducted performance tuning and profiling using **JProfiler**, **New Relic**, and **Prometheus**, optimizing slow database queries and improving system efficiency by 23%.

Communitech Inc.

Falls Church, Virginia

Junior Software Engineer

Nov 2012 – Aug 2014

- Worked on various small and medium-sized projects, using full-stack and backend frameworks across multiple industries, including **CRM**, healthcare, and network solutions.
- Developed full-stack applications using **Python** (**Flask**, **Django**), **JavaScript/TypeScript** (**Node.js**, **Express.js**), and **PHP** (**Laravel**, **CodeIgniter**), ensuring cross-platform compatibility.
- Built and maintained server-side APIs with **Node.js** (**Express.js**, **Fastify**) and integrated them with **React** and **Angular** frontends.
- Optimized **MySQL** and **PostgreSQL** queries, reducing execution time by 25% in data-heavy applications.
- Developed **Python** automation scripts for system monitoring, log analysis, and database health checks, improving operational efficiency by 30%.
- Implemented **RESTful** and **GraphQL APIs**, improving frontend-backend communication and reducing data over-fetching.
- Enhanced DevOps workflows by integrating **CI/CD pipelines** with **Jenkins**, **GitHub Actions**, and **Docker** for faster deployment cycles.
- Implemented secure authentication mechanisms using **JWT**, **OAuth2**, and role-based access control (**RBAC**), strengthening security across various applications.

Education

Skills

- **Programming Languages**
Java, C#, Python, JavaScript, TypeScript, PHP, PL/SQL
- **Backend Technologies**
Spring Boot, Spring MVC, Hibernate, J2EE, Servlets, Spring Batch, JAX-RS, ASP.NET, WCF, Express.js, Flask, FaskAPI
- **Frontend Technologies**
Angular, React.js, Redux, Next.js, Thymeleaf, JSF
- **Databases**
Microsoft SQL Server, MySQL, PostgreSQL, MongoDB, Oracle JDBC, ElasticSearch
- **APIs**
RESTful APIs, GraphQL, SOAP, gRPC
- **Cloud & Data Platforms**
AWS (S3, Lambda), Google Cloud Platform (BigQuery), Azure Event Hub
- **Containerization**
Kubernetes, Docker
- **Build & Deployment Tools**
Maven, Jenkins, GitLab CI/CD Pipelines
- **Monitoring & Observability**
Prometheus, Grafana
- **Caching Solutions**
Redis
- **Messaging & Event Streaming**
Kafka, RabbitMQ
- **Security**
Spring Security, OAuth 2.0, JWT, RBAC
- **Version Control**
Git, GitLab, GitHub
- **Methodologies**
Agile (Scrum, Kanban), CI/CD Pipelines, Microservices Architecture
- **Testing Frameworks**
JUnit, Mockito
- **Collaboration Tools**
Jira, Confluence, Linear
- **Platforms**
Windows Server, Debian Linux, Oracle Linux, Ubuntu
- **Other Technologies**
Pandas, Tensorflow, WhisperAI, Tesseract, Pipeline
