SUMMARY:

- Accomplished **Senior Atlassian Administrator** with **9+ years** of industry experience, specializing in **Jira, Jira Service Management, and Confluence**
- **Managed large-scale Atlassian environments** with **10,000+ users**, optimizing system performance and security
- Proficient in **migrations** from **Jira Server/Data Center to Cloud** and **Cloud-to-Cloud transitions**, including planning, testing, and troubleshooting
- Experience in administering **Jira** and **Confluence** for **large user bases**, implementing **complex configurations** to meet organizational needs
- Expertise in **integrating Jira** and **Jira Service Management** with **Microsoft Teams, ServiceNow, SharePoint, EazyBI, and PowerBI** for automated reporting
- Skilled in **Agile methodologies** such as **Scrum** and **Kanban** to improve **project delivery** and **adaptability**
- Strong experience in creating **custom request types** in **Jira Service Management** tailored to **customer requirements**
- Proven track record in designing **issue hierarchies** and **complex workflows** using **properties, validators, post functions, behaviours, and conditions**
- Proficient in **JQL queries** and **Dashboards** for advanced reporting and data visualization
- Skilled in **Atlassian plugins**, including **ScriptRunner for Jira, Automation for Jira, Insight (Assets), Zephyr, Secure Fields, and Draw.io**
- **Deployed and maintained** Atlassian applications on **AWS EC2 instances**, optimizing instance types, auto-scaling, and load balancing to enhance reliability
- Configured **AWS S3 for data storage, backups, and integration** with Atlassian products while leveraging **CloudWatch** for real-time monitoring, log analysis, and performance optimization
- Integrated **AWS Route 53 for domain management and DNS resolution** of Atlassian services, ensuring seamless access across global teams
- Proficient in creating **permission schemes, security schemes, and notifications** for **controlled access** in Jira and Confluence
- Skilled in **Jira REST API** integration using **Python** for **issue tracking, project automation, and workflow management**
- Experience in **installing, configuring, and managing Jira and Confluence plugins**, with **seamless third-party integrations**
- Conducted **training sessions** for **cross-functional teams and new joiners**, improving proficiency in the **Atlassian tool stack**
- **Configured and managed ITSM frameworks** in Jira Service Management, ensuring compliance with **ITIL v3** standards for streamlined service request fulfillment and SLA tracking
- Proficient in **Python scripting** for **automation**, optimizing **Jira Software, Jira Service Management, and Jira Core** workflows
- Collaborated with **senior management** to align work with **organizational goals**, optimizing **strategic objectives** and **overall efficiency**

EDUCATION:

- **Masters of Science** in Micro and Nano Systems.
Chemnitz University of Technology, Germany – 2013-2017
- **Bachelor of Technology** in Electronics and Communications Engineering.
Jawaharlal Nehru Technological University, India – 2007-2011

TECHNICAL SKILLS:

Operating Systems	Unix, Linux (Ubuntu, CentOS, Debian, Red Hat), Windows
Scripting Languages	Shell scripting, Python, Groovy and PowerShell
Databases	MSSQL, MySQL
Cloud Services	AWS (EC2, S3, VPC, IAM, Lambda, CloudFormation, CloudWatch, ALB)
Project Management Tools	Jira, Jira Service Management, Jira Work Management, MS Project, Service now, Confluence, Trello, Asana
Programming	HTML, CSS, JavaScript, React JS, JAVA
IDE Tools	Visual Studio Code, IntelliJ IDEA, Eclipse
Other Tools	MS Office, CRM, SAP (SD Module), GIT, Bitbucket

PROFESSIONAL EXPERIENCE:

Entrivis Inc – Georgia, USA

Role: Senior Software Engineer (Atlassian): Oct 2024 – Present

Key Responsibilities:

- Develop custom workflows and automations in Jira to enhance Agile processes and reduce manual tasks for teams practicing Scrum and Kanban methodologies
- Facilitate the creation of sandbox instances to support major process changes, enabling seamless testing and feedback loops
- Define and spearhead the rollout of comprehensive workflows including conditions, validators, and post function as well as screen schemes, permission schemes, and notification schemes
- Lead efforts to optimize and improve Jira/Confluence setups and workflows, identifying areas where functionality should be enhanced to meet user needs
- Develop custom scripts using Python for bulk issue operations, automated reporting, and data synchronization
- Perform data validation and quality assurance post-migration, meticulously auditing migrated data for accuracy and consistency
- Create Python-based dashboards with visualization tools to display key Jira metrics for management
- Lead tools like ScriptRunner, Groovy scripts, and REST APIs to automate migration tasks, enhance efficiency, and customize migration workflows as needed
- Effectively manage licensing and renewals for Atlassian tools, ensuring compliance with organizational policies and vendor requirements

- Automate and Maintain Asset Management inventory using Insight (Assets) through import jobs from different data sources
- Deliver ongoing support to users, including issue troubleshooting and effective resolution
- Foster technical collaboration and engagement with both internal and external partners beyond Entrivis through engaging presentations, workshops, and meetings
- Collaborate with stakeholders to translate reporting requirements into efficient JQL queries, ensuring data accuracy and relevancy for project reporting

Avancis GmbH – Torgau, Germany.

Role: Senior Engineer (Atlassian): Sep 2019 – May 2023

Key Responsibilities:

- Architected the design and configurations for Jira, Jira Service Management, and Confluence for 10,000+ users, ensuring scalability and collaboration across Agile teams
- Managed Jira instances on AWS EC2, utilizing S3 for backups and storage, CloudWatch for monitoring and log analysis, and Application Load Balancer (ALB) for traffic distribution and high availability to ensure optimal performance and reliability
- Led end-to-end migration of Jira and Confluence from server, data center, and cloud platforms to other cloud instances, ensuring data integrity and seamless transitions with minimal downtime
- Conducted comprehensive pre-migration assessments, identified potential issues with custom fields, plugins, and data structures, and mitigated them to ensure a smooth migration process
- Worked with Python scripting for Jira data migration, including bulk issue export/import, field mapping, data transformation and status transitions
- Implemented Python scripts to handle data transformation and formatting issues during the migration process, achieving 100% data integrity
- Guided and trained teams in utilizing advanced roadmaps (Jira Plans) for organizational-level planning, enhancing project visibility and alignment across departments
- Integrated Jira and Confluence with reporting tools such as PowerBI and Tableau for enhanced reporting capabilities and real-time analytics for better decision-making
- Developed and implemented migration strategies for complex Jira instances, including large datasets and custom configurations, to enhance Agile processes and reduce manual tasks for teams practicing Scrum and Kanban methodologies
- Supported cross-functional Agile teams by configuring and maintaining Jira instances to enable effective sprint planning, backlog prioritization, and issue tracking
- Developed and maintained custom Groovy scripts to automate routine Jira tasks, resulting in a 25% - 30% reduction in manual processing time and enhancing overall workflow efficiency
- Implemented complex Jira workflows and business processes using Groovy scripts, including post-functions, conditions, and validators to enforce project management methodologies
- Conducted interactive training and knowledge transfer sessions for diverse business and technical stakeholders, empowering them with the skills and insights needed for effective utilization of Jira and JSM projects and integrations
- Developed custom Bitbucket hooks to enforce coding standards and trigger automated Jira updates, ensuring code quality and consistency across large-scale projects

- Expert in Confluence setup and administration, optimizing space usability, managing user permissions, and integrating with key Atlassian tools to streamline communication and documentation workflows
- Tracked project milestones and analysed progress to ensure alignment with short- and long-term goals
- Documented processes thoroughly, providing clear and concise guidelines for effective knowledge sharing and future reference

Solibro Hi-Tech GmbH – Wolfen, Germany.

Role: Associate Engineer (Atlassian): Jun 2018 – Aug 2019

Key Responsibilities:

- Facilitated effective communication and collaboration among diverse divisions, groups, and departments to ensure seamless teamwork and synergy
- Leveraged advanced JQL queries to create custom dashboards and filters, providing Agile teams with actionable insights for decision-making
- Spearheaded the maintenance and optimization of Jira software, Confluence and Jira Service Management projects, workflows, automations, permissions, notifications, dashboards, filters, and reports, ensuring the platform's continued efficiency
- Collaborated closely with subject-matter experts across departments, gaining deep insights into their internal processes and subsequently translating them into customized Jira projects
- Managed critical Jira application and system administration responsibilities, including performing backup and restore operations, overseeing test systems, and conducting compatibility assessments for new software releases and plugins
- Utilized Jira's advanced querying capabilities alongside Bitbucket to generate real-time reports and dashboards, providing insights into development progress and helping identify bottlenecks
- Developed Python scripts to automatically transition issues between Jira statuses based on custom criteria, improving workflow efficiency
- Demonstrated proficiency in setting up SLA's, KPI's, CSF's and complex request types in Jira Service Management
- Worked with Python libraries such as jira, requests, and pandas for API interactions and data processing
- Designed and delivered training sessions on Groovy scripting for Jira to internal teams, boosting team productivity and enabling non-technical staff to understand and use basic scripts for daily tasks
- Integrated Zephyr with Jira workflows to ensure seamless alignment between development and testing processes
- Created a suite of Groovy scripts for real-time monitoring and alerting on critical issues in Jira projects, reducing downtime and accelerating issue resolution times
- Performed regular Jira audits and optimizations, identifying and addressing performance bottlenecks, which led to a 30% improvement in system response times
- Managed Jira Service Management for ITSM, including SLA tracking, incident workflows, and change management processes

Fraunhofer ENAS – Chemnitz, Germany.

Role: Student Research Assistant: Oct 2015 – Sep 2017

Key Responsibilities:

- Engaged in pioneering research on Giant Magneto Resistance (GMR) sensors, focusing on optimizing sensor design and functionality to advance data collection accuracy and reliability
- Leveraged Jira extensively to manage and document research project milestones, tasks, and outcomes, ensuring streamlined operations and adherence to timelines
- Conducted detailed experimental setups and data analysis for GMR sensor projects, contributing to innovative solutions and enhancements in sensor technology
- Administered Jira workflows, custom fields, and dashboards to optimize project tracking and reporting in a research environment, enhancing team productivity
- Trained fellow research assistants on utilizing Jira for project management, fostering a more organized and efficient research process
- Managed Jira permissions and roles to align with Agile team structures and ensure secure and efficient project management
- Utilized Java in conjunction with Jira's REST API to design a seamless two-way data exchange, enabling real-time updates and enhanced project visibility for stakeholders
- Implemented JQL-based automations within Jira, improving productivity by automating routine tasks, such as notifications, transitions, and updates
- Utilized Structure for Jira to create dynamic hierarchies and organize large-scale projects for better tracking and reporting
- Integrated Confluence with Jira to create a centralized documentation hub for GMR sensor research, facilitating efficient information sharing and maintaining comprehensive project records

Cognizant Technology Solutions – Hyderabad, India.

Role: Senior Systems Executive (Incident Management): Nov 2011 – Sep 2013

Key Responsibilities:

- Worked on comprehensive incident management operations, providing 24/7 support for mission-critical production environments
- Supported the end-to-end lifecycle of incidents, from initial detection through to full-service restoration
- Assessed incident severity classifications, ensuring alignment with business impact and urgency
- Facilitated and managed P1 critical incident bridge calls, driving swift resolution of high-priority issues
- Diagnosed and resolved complex LAN, WAN, VPN, and firewall issues, significantly reducing downtime and operational disruptions
- Designed and optimized ITSM processes, including Incident, Problem, Change, and Service Request Management
- Executed production control and monitoring activities, ensuring seamless system functionality and performance

- Implemented ITIL v3 best practices to enhance IT service delivery, ensuring efficiency and compliance
- Authored and maintained detailed documentation, user guides, and knowledge base articles to support self-service and cross-team knowledge sharing
- Developed and enforced Quality of Service (QoS) policies in accordance with application and business needs, optimizing service performance
- Automate and Maintain Asset Management inventory using Insight (Assets) through import jobs from different data sources
