OBJECTIVE	Passionate Lead QA Engineer with 20 years of experience successfully leading high profile, multi-million Dollar projects with a proven track record of improving product quality and team efficiency. Proficient in manual testing, automation testing, L10N testing, exploratory testing, and test planning using Agile methodologies. Seeking a full-time position where I can leverage my skills to drive quality improvements and contribute to organizational success while continuing my professional development.
PROFESSIONAL SUMMARY	• Experience with hardware systems, including Apple computers, IBM PC & compatibles, VAX, Intergraph, HP, SGI, and Sun workstations. • In depth knowledge of LINUX, Mac OSX, UNIX, and Windows operating system internals, system administration, and system security. • Experience with Microsoft Office, Adobe Acrobat, and various web browsers like Chrome, Edge, and Firefox. • Experience with Jira issue tracking system, Confluence knowledge management tool, and Zephyr test management tool. • Experience with both automated and manual testing methodologies, including unit, integration, E2E, regression, and smoke testing. • Ability to read schematics, use an oscilloscope, logic analyzer and soldering iron. • Ability to troubleshoot hardware, software, and network. • Ability to identify and learn new technologies quickly. • Broad and extensive experience in quality assurance process and execution including test cases and test plans. • Broad and extensive experience in software development. • Broad and extensive experience in testing methodologies in an Agile development environment.
SKILLS	• Excellent written and verbal communication skills. • Fluent in English, Portuguese and Spanish. • Strong organization and time management skills while working in a rapid/fast-phased environment. • Self-starter and able to work independently or as part of a team. • Proven leadership skills and ability to motivate. • Strong analytical, diagnostic, and problem-solving skills. • Quick learner, adaptable, reliable, and flexible. • Strong attention to detail, and ability to identify complex issues.
EXPERIENCE 10/2005 – 8/2025	Lead QA Engineer <i>ELECTRONICS FOR IMAGING/FIERY LLC Fremont, CA</i> • Led various high profile/highly visible Fiery Digital Front End (DFE) projects, resulting in a 20% increase in product efficiency and successful launch of new features. • Led internal teams and collaborated with cross-functional teams, both local and remote. • Interacted with OEM partners during bug scrubs and program meetings, sharing quality status, and addressing partner's concerns, which resulted in a 20% reduction in open issues and improved partner satisfaction scores. • Proactively created detailed task lists and accurate effort estimates, ensuring clear communication with managers and enabling on-time project delivery. • Created test reports and tracked defect density metrics to monitor project quality and progress. • Actively participated in the QA process through requirements/design analysis and development of test plans and strategies, leading to a 20% reduction in post-release defects for both internal and external products. • Developed, implemented and maintained effective L10N, I18N, exploratory charters, workflow, regression and smoke test cases. • Recommended, implemented, and evaluated automated and manual testing strategies across a wide variety of platforms, resulting in a 30% reduction in post-release defects. • Performed Spanish and Brazilian Portuguese L10N and I18N tests, including verifying UI translations, checking date/time formats, and ensuring proper character encoding. • Lead a quality improvement initiative to introduce Pseudo-Localization. Defined the creation of a tool that injected readable characters with varying lengths and character sets. This helped non-L10N experts identify potential issues earlier in the product development cycle, making products ready for L10N. This reduced L10N-related delays by 30% and saved an estimated \$50,000 in additional costs per release. • Lead quality improvement initiative "Fiery Cleanse" using an agile style process to identify and flag obsolete features for removal. Teams then followed the "Undone-Done" checklist to ensure safe removal without side effects. This resulted in the removal of 20 obsolete features. • Performed automation, functionality, performance, and stress tests using in-house tools and commercial products like Selenium and Jenkins. • Logged defects in Jira with clear and complete information, including logs, screenshots, and workarounds; tracked over 50 defects to ensure timely resolution, reducing average resolution time by 20%. • Troubleshoot basic hardware defects, resolved TCP/IP networking issues, and diagnosed problems in Windows and Linux operating Systems, resulting in a 20% reduction in system downtime for the team. • Troubleshoot software defects reported by customers using root cause analysis, improving customer satisfaction scores by 15% through timely and effective resolutions. • Coordinated with the Engineering team to execute test cases and gather logs, enabling replication of reported defects and identification root causes. Which reduced defect resolution time by 20% and improved product stability. • Proactively investigated root causes in failure reports and spearheaded quality assurance process enhancements adopted across the

QA department.

- Reviewed customer installation guides, and other documents, for accuracy and verified release media for compliance.
- Mentored junior team members and new hires.
- Set up and maintained test simulators, and other laboratory environments.

11/2004 - 4/2005

QA Localization Engineer (Contract)

FRONTRANGE SOLUTIONS Pleasanton, CA

- Performed black box tests on the Spanish version of HEAT 8.03, and reported functionality, layout, localization, translation, and truncation issues using an internal bug tracking system called ReleaseManagement.
- Performed Spanish translation and localization fixes on the Spanish version of HEAT 8.03.
- Performed Spanish translation and localization fixes on the Spanish version of HEAT Demo database using Microsoft Access and HEAT's Administrator and Call Logging modules.
- Performed Spanish translation and localization fixes on the Spanish Crystal Reports using HEAT 7.0 and Crystal Reports.
- Performed regression tests to verify bug fixes, closed them, and/or reported a new regression related bug.

6/1999 - 4/2003

Software Engineer

VLSI TECHNOLOGY/PHILIPS SEMICONDUCTORS San Jose, CA

- Wrote, tested, and implemented a check services daemon, which port scanned a service to verify that a network line is alive.
- Aided other software engineers by maintaining and performing quality assurance tests on both the Mask Utilities Manager (MUM) and the Automated Utilities Management System (autUMS).
- Wrote, tested, and implemented both an autUMS and a MUM Default Reader Class, which read autUMS and MUM Default files respectively from any local and remote directory.
- Wrote, tested, and implemented a Log Out Class, which opened and appended information into an autUMS log file at different levels of performance.
- Wrote, tested, and implemented a checksum function in accordance to SEMI P10-0301 standard.
- Performed HP-UX systems administration.
- Performed basic Mask Tooling tasks.

7/1996 - 1/1997

Test Engineer (Internship)

SILICON GRAPHICS COMPUTER SYSTEMS Mountain View, CA

- Tested functionality and performance of new and/or existing hardware components and application software according to customer specifications. And reported results.
- Aided in the performance of package drop test and system shock/vibration test. Checked for systems functionality after such tests.

6/1993 - 6/1995

Engineering Aide (Design Drafter) - Internship

NASA AMES RESEARCH CENTER Moffett Field, CA

- Designed models and tested components for Wind Tunnels.
- Prepared detail drawings from drafting board and workstations.
- Incorporated drawing changes and developed details for fit and assembly of used test hardware.
- Assisted other engineers with their designs and project research.

EDUCATION

BS Computer Engineering

Minor in Mathematics

San Jose State University San Jose, CA

May 1999
