

Chitrak Dave

Full-Stack Developer

✉ davechitrak@gmail.com ☎ +1 (716) 218-9457 📍 Buffalo, NY 🌐 LinkedIn

Summary

Full-Stack Developer with around **3+ years of experience** in **Java**, specializing in client-centric applications using **Spring Boot** and **Java EE** for **backend development**, and **React.js** with **Redux** for **front-end solutions**. Proficient in **HTML**, **CSS**, and **JavaScript**, with hands-on experience in **AWS** and both **Windows** and **Linux** environments. Strong **analytical skills** and a solid foundation in **data structures**, adaptable to diverse work cultures and focused on delivering **innovative solutions**.

Technical Skills

Front-end Technologies: HTML5, CSS3, JavaScript, React.js, Angular, Bootstrap, XML, jQuery, AJAX, Redux

Database Technologies: MySQL, MongoDB, PostgreSQL, SQL Server, Oracle, Firebase, Cassandra

Back-end Technologies: Python, Flask, Django, Java, Node.js, C/C++, MVC Framework, RESTful APIs, Maven, Micro-services, PyTorch, JSON, Apache Tomcat

Tools and Technologies: Git, Visual Studio Code, Docker, Kubernetes, Jenkins, Apache Tomcat, Nginx, Swagger, Postman, GitLab, Eclipse, IntelliJ IDEA, JUnit, Mockito, Log4j, Splunk, JIRA, Tableau, Gradle, OAuth

Cloud Technologies: AWS (AWS Lambda, EC2, SNS, SQS, RDS, Elastic Load, S3, CloudWatch), GCP (cloud run, cloud function, SQL, Big Query), Microsoft Azure

Professional Experience

Full Stack Developer, Deloitte

Mar 2024 – present | Remote, USA

- Built and launched a **bill-paying system** with **Java** and **Spring Boot**, using **HTML**, **CSS**, and **JavaScript** for the front end. This made the system not only look good but also work smoothly, giving users a better experience.
- Set up a **PostgreSQL database** to handle all the data needs, making sure that everything was stored and retrieved reliably while keeping data secure and intact.
- Implemented **AWS Cloud hosting** to ensure our application was always up and running and could handle growth. This setup improved performance and dependability and also helped us save on costs.
- Developed **RESTful APIs** to make sure that data moved securely between the front end and back end, allowing different parts of the system to communicate effectively.
- Created **CI/CD pipelines** with **Docker** and **Kubernetes** to automate testing and deployment. This setup helped us catch errors early and ensured that our microservices ran smoothly and reliably.

Software Developer, VMware

Jun 2020 – Jul 2022 | Ahmedabad, India

- Helped design and roll out **enterprise applications** using **Java** and **J2EE** technologies like **Core Java**, **EJB**, **Servlets**, and **JSP**, creating scalable and efficient solutions.
- Assisted in building **microservices** with **Spring Cloud**, using tools like **Gateway**, **API Service**, **Core Service**, **Discovery Server**, and **Monitor Server** to ensure services could find and talk to each other smoothly.
- Worked on **RESTful microservices** with **Spring Boot** and **Spring MVC**, following REST principles for easy communication and integration, which improved the reliability and scalability of services.
- Created **interactive front-end interfaces** with **React.js** and **React Hooks (v16.8)**, allowing real-time updates from the back end. This reduced the code size by **30%** and enhanced the user experience.
- Improved **database performance** by **35%** by refining **SQL** and **PL/SQL** queries. Used **Spring Data JPA** to make data handling with **MySQL** and **PostgreSQL** more efficient.
- Managed **containerized deployments** with **Docker** and **Kubernetes**, and automated processes using **UNIX Shell scripting**, which made our CI/CD pipeline faster and cut deployment time by **40%**.
- Set up **AWS EC2** for flexible computing, **AWS S3** for secure storage, and **Amazon RDS** for automated database management with **MySQL** and **PostgreSQL**, ensuring our systems were reliable and available.
- Used **AWS Lambda** to build serverless solutions, which improved app performance by reducing the need for managing servers, and set up **Amazon API Gateway** to handle API traffic securely.
- Worked in an **Agile team**, using **JIRA** to track tasks and **Jenkins** for automated CI/CD, helping to deliver projects on time with a **99.9% success rate** in deployments.

Software Developer, Lotus Infosystems

May 2019 – May 2020 | Bhavnagar, India

- Worked through all stages of development for various projects, using **Java** and **Spring Boot** to handle **gathering requirements**, **design**, **analysis**, and **coding**.
- Built strong **RESTful APIs** with **Java** and **Spring Boot**, which were used alongside **React**. This led to a **25% boost** in data transfer speed and improved user experiences.
- Set up a **CI/CD pipeline** with **Jenkins** on **Kubernetes**, integrating **Java** and **Spring Boot** to make the **build**, **test**, and **deployment** processes smoother in a containerized environment.
- Used advanced **data structures** and **algorithms** in **Java** to make systems run faster and use memory more efficiently, improving overall **performance** and **scalability**.
- Developed and fine-tuned **SQL stored procedures** and functions, making data retrieval **20% more efficient** in the **DAO layer**, and used **Selenium** for automated testing to ensure everything worked well with **Oracle** databases.

Education

Master of Science in Computer Science, University at Buffalo

Aug 2022 – Dec 2023 | New York, USA

Bachelor of Technology in Computer Science, Lovely Professional University

Aug 2017 – Jun 2021 | Phagwara, India
