

Professional Experience

Wayfair — Boston, MA // Mobile Infrastructure Software Engineer II

April 2024 — Present

- Create features for the Wayfair app using VSM architecture and SwiftUI components
- Maintain and improve the processes used in our CI pipeline with BuildKite
- Coordinate with teams to resolve bugs in each weeks release branch
- Led development of localization (l10n) tool using Swift packages and BuildKite, with nightly synchronization processes
- Actively participating in architecture discussions, creating detailed documentation for current and future projects
- Leading development of AI Test Generation tool for iOS repo, increasing code coverage by ~12% on iOS repo
- Integrated Glean Slack bot to automate answers for common questions in team channels
- Implemented locale injection to override Apple's system default, allowing dynamic language selection in the app

Maritz Global Events — Remote // Mobile Software Engineer

November 2021 — April 2024

- Solely developed and maintained 2 native iOS and 2 native Android apps
- Built new web features using Angular/.NET
- Developed a configurable Wallet Pay interface for client-facing portals
- Enhanced existing and new APIs on AWS
- Added multi-language support to API and implemented it on iOS
- Provided architectural analysis and led architecture reviews to guide informed decision-making
- Led documentation efforts and knowledge sharing among teams and stakeholders

Steezy Wear — Rochester, NY // Software Engineer

Fall 2009 — Spring 2016

- Managed the end-to-end website development process, including design, coding, content updates, and web server setup for the company's website, www.steezy-wear.com, ensuring consistent uptime and smooth functionality.
- Implemented the PayPal API for secure online transactions and utilized automated email systems to provide seamless communication and timely information to customers.
