

DAMINI SETTAPPA RANGANATHA

Phone: 708-831-1738 | Email: daminiranganatha@gmail.com | [LinkedIn](#) | Location Chicago, IL

SUMMARY

- Cybersecurity professional with 6+ years of experience securing enterprise networks, cloud environments, and critical infrastructure.
- Expertise in threat intelligence, incident response, and SIEM platforms (Splunk, QRadar) for proactive cyber defense.
- Designed and implemented Zero Trust Architecture (ZTA) to enhance data security and minimize attack surfaces.
- Strong background in identity and access management (IAM), privileged access management (PAM), MFA, and SSO to prevent unauthorized access.
- Hands-on experience with endpoint security (EDR/XDR), vulnerability management, and security compliance (NIST, ISO 27001, HIPAA).
- Led DevSecOps security integration for banking and healthcare sectors, implementing automated compliance checks and CI/CD security pipelines.
- Developed Python and PowerShell scripts for security automation, improving threat detection and response times.
- Conducted dark web monitoring, OSINT threat analysis, and adversarial tracking to identify emerging cyber threats.
- Skilled in cloud security (AWS, Azure), firewall management (Palo Alto, Snort), and network segmentation (NSX-T) to strengthen infrastructure defense.

SKILLS

- **Cyber Threat Intelligence & Incident Response:** Threat analysis, adversarial tracking, malware reverse engineering, SIEM (Splunk, QRadar), MITRE ATT&CK, threat hunting.
- **Infrastructure & Network Security:** Vulnerability management, endpoint security (EDR/XDR), patch management, network monitoring, firewall management, IDS/IPS (Snort, Palo Alto).
- **IT Support & Helpdesk Management:** Troubleshooting (hardware/software), IT asset management, ticketing systems (ServiceNow, Freshservice), Windows & macOS support, mobile device management (Intune, Jamf).
- **Endpoint & Device Security:** Anti-virus/anti-malware management, endpoint hardening, configuration baseline management, data loss prevention (DLP).
- **Identity & Access Management (IAM):** Account provisioning, multi-factor authentication (MFA), single sign-on (SSO), privileged access management (PAM).
- **Cloud & System Administration:** Microsoft 365 administration, Active Directory (AD), Group Policy, Windows Server management, cloud security (AWS, Azure).
- **Network & Connectivity Troubleshooting:** TCP/IP, DNS, DHCP, VPN configurations, printer and network device troubleshooting.
- **Technical Documentation & Compliance:** IT policies and procedures, knowledge base creation, compliance frameworks (NIST, ISO 27001, HIPAA).
- **Scripting & Automation:** PowerShell, Python, Bash (for automating IT operations and security tasks).
- **Routing Protocols:** RIP, EIGRP, OSPF, BGP.
- **Collaboration & Communication:** End-user training, cross-functional team coordination, IT service delivery, process improvement.

WORK EXPERIENCE

CVS Health

January 2025 – Present

Cybersecurity Engineer

- Implemented Zero Trust Architecture (ZTA) to secure healthcare data, enhancing access controls and minimizing attack surfaces.
- Developed cloud security policies (AWS, Azure) to enforce compliance with HIPAA and ISO 27001, reducing security misconfigurations by 35%.
- Integrated AI-driven threat detection into SIEM (Splunk), enabling real-time anomaly detection and automated incident response.
- Strengthened identity and access management (IAM) by deploying risk-based authentication and Just-in-Time (JIT) access controls for sensitive healthcare systems.

Honeywell

July 2024 – November 2024

Cybersecurity - Intern

- Conducted threat hunting exercises in OT networks using the MITRE ATT&CK for ICS framework to detect and mitigate cyber threats.
- Analyzed SIEM logs (Splunk, QRadar) to identify anomalous activity, reducing undetected security incidents by 30%.
- Developed Python scripts for security automation, enhancing detection and response capabilities for industrial control systems (ICS).

- Investigated network anomalies by analyzing VPN configurations, DNS traffic, and firewall rules to prevent unauthorized access.
- Strengthened endpoint security in OT environments by deploying EDR/XDR solutions and enforcing data loss prevention (DLP) policies.
- Collaborated with cross-functional teams to enhance incident response protocols, improving threat detection efficiency in critical infrastructure.

Infosys BPM

January 2020 – December 2022

Cybersecurity Engineer

- Designed and implemented a secure DevOps pipeline for a banking client, integrating security best practices into CI/CD workflows.
- Developed automated security scanning using tools like SonarQube and Checkmarx, reducing security vulnerabilities in application code.
- Enforced privileged access management (PAM) policies for DevOps teams, securing access to critical cloud infrastructure.
- Integrated Multi-Factor Authentication (MFA) and Single Sign-On (SSO) to enhance identity and access controls across CI/CD environments.
- Deployed cloud security policies on AWS and Azure to prevent misconfigurations and ensure compliance with ISO 27001 standards.
- Implemented patch management and vulnerability scanning for containerized applications using tools like Aqua Security and Qualys.
- Reduced security misconfigurations by 40% through automated compliance checks aligned with NIST and HIPAA frameworks.
- Strengthened endpoint security (EDR/XDR) for development environments, mitigating malware and insider threats.
- Led cross-functional security awareness training, educating DevOps teams on secure coding practices and regulatory requirements.

VMware

July 2017 – December 2019

Security Operations & Network Security

- Designed and implemented NSX-T micro-segmentation policies, reducing unauthorized lateral movement across virtual workloads.
- Configured firewall rules and IDS/IPS policies (Palo Alto, Snort) to enhance network security monitoring and intrusion detection.
- Conducted threat analysis and incident response using SIEM solutions like QRadar to detect and mitigate cyber threats.
- Managed endpoint security hardening by enforcing anti-malware protection, ensuring compliance with security baselines.
- Optimized network security architecture, integrating VPN security and secure DNS/DHCP configurations for remote access.
- Developed automated scripts in PowerShell and Python to streamline firewall policy audits and vulnerability scans.
- Led a zero-downtime NSX-T deployment, securing over 500+ virtual machines with dynamic security groups.
- Provided tier-3 IT support for security escalations, troubleshooting Windows Server security configurations and network anomalies.

PROJECTS

Blockchain-Based Identity & Access Management (IAM)

Technologies: Blockchain (Hyperledger Fabric), Decentralized Authentication, Smart Contracts

- Designed a blockchain-based IAM solution for secure, decentralized authentication, reducing reliance on centralized identity providers and mitigating identity fraud.
- Implemented smart contracts for automated identity verification, ensuring tamper-proof access control policies in enterprise environments.

Dark Web Monitoring & Threat Intelligence Automation

Technologies: OSINT, Python, Tor Network Analysis, Cyber Threat Feeds

- Built an automated dark web monitoring tool that scans Tor marketplaces, forums, and paste sites for leaked credentials and cyber threats.
- Integrated real-time threat intelligence feeds into SIEM (Splunk, QRadar) to proactively identify compromised corporate data.

EDUCATION

Master in Cybersecurity

DePaul University, – Chicago, IL | GPA: 3.53/4

Bachelor in Computer Science Engineering

Sambhram Institute of Technology – Bangalore, India
