EXPERIENCE

Catalyte, Senior Software Engineer

January 2014 - Present

- Architecting full-stack solutions using the latest technologies and methods, writing well designed, efficient, reusable, testable code.
- Solve problems, advise, influence, and guide technical decisions and solutions.
- Develop data models at all levels of an application from database to user interface.
- Develop web-based frameworks and APIs.
- Implementing single-page applications using various TypeScript and JavaScript libraries.
- Improving UI/UX of existing applications using a responsive and mobile-first approach.
- Evaluation, application, and integration of third-party libraries, tools, and APIs.
- Continuous Integration/Deployment using Azure DevOps, Jenkins, Bamboo and other CI tools.
- Working as development lead on numerous projects for customers in various business verticals.
- Assigning tasks to fellow team members and ensuring timely completion of tasks and stories.
- Peer code reviews and mentoring.

DatStat, Senior Software Engineer

September 2008 - December 2014

- Design and build Web API and cloud infrastructure using the Windows Azure platform using ASP MVC, Web API, JQuery, JQuery UI, Knockout JS, Bootstrap, CSS, LESS.
- Architecture and development of software to manage research operations.
- Design, build, and upgrade database, web service, and UI for software products.

SKILLS

SOLID Design Principles
MVC, MVVM, SPA Patterns
SaaS/PaaS
SQL and NoSQL Databases
.NET, .NET Core, C#
ASP.NET MVC, WebAPI, Blazor, Maui
Web Services, Microservices
Entity Framework
JavaScript, TypeScript
Angular, VueJS, JQuery
JSON, REST-ful Web Services
LESS, SASS
Bootstrap, Material, WPF
NodeJS, NPM, NX, WebPack
ExpressJS
SQL Server, Oracle, MySql
MongoDB, CosmosDB
RabbitMQ, MSMQ, SQS,
Firebase
Windows Azure, AWS
CI/CD Pipelines, Bamboo, Jenkins
Azure DevOps, Jira
XML, XSLT, SOAP
Agile/Scrum Practices

- Addressing and fixing customer-reported product defects.
- Performance tuning and code analysis of scalable software applications.

Institute for Translational Health Sciences, Clinical Study Systems Architect

September 2004 - September 2008

- Architecture, development, and administration of databases to collect, store, and analyze research data.
- Designing, building, and maintaining secure web interfaces to research databases.
- Integration of data from multiple sources including scientific instruments, research databases, and medical records.
- Providing selective access to research data to outside collaborating labs.
- Managing software development and data integration projects.
- Evaluation of third-party applications.
- Coding, testing, and debugging applications.
- Performance tuning existing applications.

eNom, Web Applications Developer

September 2003 - September 2004

- Designing, building, and maintaining web services for domain registration.
- Creating and maintaining features for eNom and partner websites.
- Assisting in developing strategic web site features to increase usability.
- Coding, testing, and debugging applications.
- Performance tuning existing applications.

The University of Toledo, Senior Web Applications Analyst

September 2001 - September 2004

- Evaluate university business logic for software requirements.
- Systems architecture and design.
- Coding, testing, and debugging applications.
- Systems Integration.
- Consultation for various IT initiatives in different campus offices.
- Develop policies for IT systems as a member of various university committees.
- Assess university information systems and suggest recommendations on future enhancements and architecture.

EDUCATION

Florida State University, BA, Philosophy and English
