

Davis De Auntray

Union, SC 29379 • (929) 566-6863 • davis.auntray0107@outlook.com

Summary

Senior Software Engineer with 10+ years of experience building, scaling, and delivering enterprise-grade web applications across fintech, e-commerce, and digital health domains. Expert in C#, .NET, and Angular, with a proven record of leading full-stack development from architecture to deployment on AWS and Azure. Strong background in microservices, RESTful APIs, CI/CD pipelines, and cloud-native architecture, with a focus on performance, maintainability, and clean code.

Technical Skills

Languages: C#, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frontend: Angular, RxJS, NgRx, Bootstrap, TailwindCSS

Backend & APIs: ASP.NET Core, .NET 6/7, Web API, Entity Framework, RESTful APIs, Microservices Architecture

Cloud & DevOps: Amazon Web Services (EC2, Lambda, S3, RDS, CloudFront), Microsoft Azure, Docker, Terraform, GitHub Actions, Jenkins, CI/CD Pipelines

Databases: SQL Server, PostgreSQL, MySQL, Redis

Testing & QA: xUnit, NUnit, Jest, Postman, Cypress

Tools & Practices: Git, Jira, Confluence, Agile / Scrum, SOLID principles, Clean Architecture

Professional Experience

Lead Software Engineer | Deloitte Digital

Arlington, VA | Jul 2023– Sep 2025

When Deloitte Digital partnered with Fortune 500 clients to modernize legacy systems into cloud-native, AI-ready platforms, I led the full-stack engineering team responsible for building enterprise-grade web applications using C# (.NET Core) and Angular. Our mission was to deliver scalable, secure, and data-driven tools that powered real-time decision-making across global business units.

- Architected and developed microservices in .NET Core to integrate internal analytics APIs with Salesforce CRM, handling multi-region data synchronization.
- Built Angular 15+ dashboards with RxJS and NgRx for real-time CRM insights, reducing data-load latency by 35%.
- Containerized and deployed applications on AWS ECS and Azure App Service, enabling seamless scaling across client environments.
- Automated CI/CD pipelines using Docker, Terraform, and GitHub Actions, ensuring zero-downtime releases.
- Mentored 6 engineers on .NET design patterns, Angular architecture, and DevOps practices.

Tech Stack: C# · .NET Core · Angular · TypeScript · AWS (Lambda, ECS, RDS, S3) · Docker · Terraform · SQL Server

Senior Full Stack Engineer | Amazon

Atlanta, GA | Apr 2020– Jul 2023

As part of the Supply Chain 2023 by Amazon initiative, I helped design and build an end-to-end logistics platform that automated inventory, freight, and delivery operations for millions of sellers. I contributed across the stack — from backend APIs to frontend interfaces — ensuring the system could scale to Amazon’s global logistics demand.

- Engineered high-performance APIs using ASP.NET Core and AWS Lambda, enabling real-time visibility across shipment, storage, and delivery data.
- Built Angular dashboards for supply chain tracking, integrating analytics and visualization modules used by internal and external sellers.
- Improved API throughput by 30% by optimizing database queries (SQL Server, DynamoDB) and implementing Redis caching.
- Designed automated pipelines with AWS CodePipeline and Docker, cutting deployment cycles by 40%.
- Collaborated with product and ML teams to integrate predictive restocking and delivery forecasting features into the platform.

Tech Stack: C# · ASP.NET Core · Angular · TypeScript · AWS (Lambda, S3, RDS, DynamoDB) · Redis · Docker · SQL Server

Full Stack Engineer | PayNearMe

Charleston, SC | Feb 2016 – Mar 2020

At PayNearMe, I built and maintained payment orchestration and merchant management platforms supporting financial institutions and retail partners across the U.S. This role deepened my expertise in transaction security, distributed systems, and financial compliance.

- Developed RESTful APIs in .NET Core to process ACH, debit, and cash-based payments, ensuring PCI-DSS compliance.
- Designed and implemented Angular-based portals for merchant onboarding, settlement tracking, and transaction reconciliation.
- Introduced asynchronous message queues (RabbitMQ, Redis) that reduced transaction latency by 35% and improved system resilience.
- Migrated monolithic legacy code into containerized microservices deployed on AWS ECS.

Tech Stack: C# · .NET Core · Angular · TypeScript · PostgreSQL · Redis · RabbitMQ · AWS ECS · Docker

Software Engineer | The Iron Yard – Digital Health Accelerator

Greenville, SC | Jun 2014 – Feb 2016

I began my software engineering career helping healthcare startups develop digital health platforms for patient monitoring and care management. This early-stage experience taught me how to translate complex user needs into clean, functional software solutions.

- Built AngularJS + ASP.NET MVC applications for healthcare analytics and clinical dashboards.
- Developed secure REST APIs with C# and implemented data encryption for HIPAA compliance.
- Assisted in AWS EC2/RDS deployments and database optimizations for small-scale pilot rollouts.

Tech Stack: C# · ASP.NET MVC · AngularJS · JavaScript · AWS EC2 · RDS · SQL Server

Education

B.S. in Computer Science | University of South Carolina

Columbia, SC | 2010 - 2014
