

Dharani Kodati

Java Full Stack Developer

dharanikodati1208@gmail.com | +1 (940) 758-1091 | LinkedIn

SUMMARY

Java Full Stack Developer with over 5 years of experience building scalable microservices and enterprise web applications using Java, Spring Boot, and Angular. Experienced in designing REST APIs, implementing event-driven architectures with Kafka, and deploying containerized applications on AWS using Docker and Kubernetes. Proven ability to improve backend performance and deliver reliable, high-availability systems in financial services environments.

SKILLS

Programming Languages: Java (8/11/17), Python (for AI/ML), JavaScript (ES6+), TypeScript, SQL, PL/SQL, Shell Scripting
Backend Technologies: Spring Boot, Spring MVC, Spring Cloud, Hibernate, JPA, Microservices Architecture, RESTful & SOAP APIs, Node.js, Express.js, GraphQL
Frontend Technologies: Angular (8+), React.js, HTML5, CSS3, Bootstrap, jQuery, JSON, AJAX, Responsive Web Design
AI / Machine Learning & Data Technologies: Python (NumPy, Pandas, scikit-learn), TensorFlow, OpenAI APIs, LangChain, NLP (spaCy, NLTK), Chatbot Integration (Dialogflow, Rasa), Apache Spark, MLlib, Data Pipeline Development, Model Deployment via REST APIs
Databases: MySQL, PostgreSQL, Oracle, MongoDB, Redis
Cloud & DevOps: AWS (EC2, S3, Lambda, SageMaker, RDS, CloudWatch), Azure (App Services, Cognitive Services, Functions), Docker, Kubernetes, Jenkins, GitHub Actions, Maven, Gradle, SonarQube, CI/CD Pipelines
Messaging & Streaming: Apache Kafka, RabbitMQ, JMS
Testing & Quality Assurance: JUnit, Mockito, Selenium WebDriver, Postman, JMeter, REST Assured, TestNG, Cucumber (BDD)
Security & Authentication: OAuth 2.0, JWT, API Gateway, SSL/TLS, SSO, Spring Security, Role-Based Access Control
Version Control & Collaboration: Git, GitHub, Bitbucket, JIRA, Confluence, Agile/Scrum Methodologies
Performance Optimization & Monitoring: SQL Query Tuning, Redis Caching, Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana)

WORK EXPERIENCE

JPMorgan Chase & Co Full Stack Engineer - Designed and developed Spring Boot-based microservices to support high-volume financial transaction processing and payment workflows, improving system throughput and ensuring high availability across distributed banking platforms. - Built and integrated secure RESTful APIs using Java, Spring MVC, OAuth2, and JWT for payment processing, authentication, and reporting services, ensuring compliance with enterprise banking security and audit standards. - Implemented CI/CD pipelines using Jenkins, Maven, Docker, and GitHub Actions, automating build and deployment processes and improving release efficiency across multiple development environments. - Developed event-driven architectures using Apache Kafka to enable real-time financial event streaming and asynchronous communication between microservices handling transactions and account services. - Developed Angular-based web interfaces for internal financial dashboards and operational tools, improving usability and maintainability while enabling teams to monitor transactions and system activity more effectively.	Jan 2026 - Present
PNC Full Stack Developer - Designed and developed high-performance Java microservices using Spring Boot, Spring Cloud, and Hibernate to support core financial workflows, including transaction processing, account services, and portfolio data management across distributed banking systems. - Built and secured RESTful APIs using Java, Spring MVC, OAuth2, and JWT to enable seamless integration between trading platforms, payment systems, and internal reporting services while maintaining compliance with financial security and audit requirements. - Implemented event-driven architecture using Apache Kafka to process large volumes of real-time financial events such as trade updates, payment notifications, and risk alerts, improving system scalability and enabling reliable asynchronous communication across microservices. - Developed Angular-based financial dashboards and reporting interfaces that allowed internal stakeholders to monitor transaction flows, portfolio performance, and operational metrics, improving visibility and decision-making for financial operations teams. - Optimized backend performance through Hibernate query tuning, database indexing in PostgreSQL, and caching strategies, reducing latency in high-volume financial data processing and improving API response times across critical banking services.	June 2024 – Dec 2025
Tata Consultancy Services Full Stack Java Developer - Engineered financial account management modules using Java, Spring Boot, and Angular, enabling real-time KYC processing and customer onboarding with 25% faster data validation. - Optimized Hibernate and JPA persistence layers, improving query response times and reducing database latency by 30%, leading to faster financial data retrieval. - Implemented Jenkins-based CI/CD pipelines integrated with Git workflows, automating build and deployment processes, cutting manual intervention, and improving team productivity by 35%. - Conducted load and performance testing with JMeter, ensuring platform stability under high transaction volumes and improving overall system resilience. - Migrated legacy monolithic applications to AWS Cloud (EC2, S3, RDS), achieving better scalability, reducing operational costs, and improving system uptime across environments.	Aug 2021 - Aug 2022
Cybage Software Junior Java Developer - Developed core modules for a Customer Engagement Portal using Java, JSP, Servlets, and Spring MVC, improving page responsiveness and reducing load times by 30%. - Built and deployed RESTful APIs to support backend microservices and internal CRM integrations, improving data consistency and communication between distributed systems. - Enhanced front-end performance with HTML5, CSS3, and JavaScript, creating a more accessible and responsive user experience that reduced bounce rates by 20%. - Migrated legacy applications to Spring Boot microservices, improving maintainability, scalability, and deployment efficiency by 25%, while reducing code complexity. - Automated unit and integration testing using JUnit, Mockito, and Selenium, maintaining over 90% test coverage and improving pre-release software quality.	Jul 2019 - Jul 2021
University of North Texas, USA Master’s in Computer and Information Sciences	Aug 2022 – May 2024
Lakireddy Bali Reddy College of Engineering, India Bachelor’s in Electronics and Communication Engineering	May 2015- Jun 2019
