

SAI DINESH

JAVA FULL STACK DEVELOPER

+ 1 (659) 287-0495 | saidinesh1112@gmail.com | www.linkedin.com/in/sai-dinesh-080589357

PROFESSIONAL SUMMARY:

- **9+ years of experience** in analysis, design, implementation, and testing of Object-Oriented Applications using **Java/J2EE technologies (Core java, JDBC, Servlets, JSP, XML, Spring, JUNIT, Hibernate, Restful API, JMS, JSTL)** and ensuring client deliverable within committed deadlines.
- Experience and in - depth Knowledge of understanding in the strategy and practical implementation of AWS Cloud-Specific technologies including **S3, VPC, RDS, SQS, SNS, Cloud Front, Cloud Formation, Elastic Cache, Cloud Watch, RedShift, Lambda, SNS, Dynamo DB.**
- Created Single page applications with **React** using Hooks, **redux** for stateful management; or using previous **React** state object plus lifecycle for component's internalize stateful management. Used react - router for routing.
- Having good knowledge of **NoSQL** databases like **Dynamo DB** and **MongoDB, Bamboo**, CRUD operations and aggregation framework.
- Developmental experience with interface screens and validations using **HTML, XHTML, JSP, Angular JS, Bootstrap, jQuery, Node JS, and CSS.**
- Experience in Angular / React development using Test driven development (TDD) using unit testing frameworks such as Jasmine Protractor, Karma, and Selenium.
- Hands on experience of Build & Deployment phases and usage of Continuous Integration (CI/CD) tools.
- Used **Jenkins** for Continuous Integration and deployment onto the **Servers.**
- Experienced on Managing local deployments in **Kubernetes** and creating local cluster and deploying application containers.
- Solid Experience in creating Clusters in **AWS** and deploying a **Docker** Image on top of **Kubernetes** Cluster.
- Sound understanding with database development and database tuning **Kubernetes** using **SQL** and implementation for **RDBMS** like **MySQL, Oracle, PostgreSQL**, and **NoSQL** like **MongoDB, DynamoDB, Cassandra.**
- Hands-on experience in using message brokers such as **ActiveMQ** and **RabbitMQ.**
- Knowledge in front-end web development using **HTML, CSS, JavaScript, React, AJAX, jQuery, Bootstrap, JSON, AngularJS, and XML.**
- Knowledge in **MEAN stack**, including **MongoDB, Express, AngularJS** and **NodeJS** for quick building **Single Page Application (SPA) website.**
- Proficient in configuring and deploying cloud platforms using **Amazon Web Services (AWS)** technologies like **EC2, S3, Elastic Beanstalk, RDS, DynamoDB, Lambda, EMR, API Gateway, CloudFront, SNS, SQS** and **SES.**
- Hand-on experience in **data analysis** using **Python, machine learning** technologies like **Spark MLlib, NumPy, SciPy, matplotlib** and **h2o.ai** and **deep learning** framework using **Caffe, TensorFlow, BrainJs** and **MXNet.**
- Hand-on experience in massive data calculation and query using big data technologies like **Spark, Hadoop 0.x 1.x, MapReduce, Flink, HDFS, Hive, HBase, Kafka** and **Oozie.**
- Hand-on experience in big data query using **Pig Latin** and performing data visualization using **D3.js.**
- Hand-on experience in implementation of **Microservices** for **Load Balancing** by configuring and developing Distributed System performed by **Zookeeper, Docker, Kafka, Mesos, Marathon, and Cassandra.**
- Experience in **Shell scripting** under **Windows** and **Unix/Linux** operation system.
- Experience in working under **Agile Scrum** and **Waterfall** methodologies and using **JIRA** as task management, issue, and bug tracking.
- **ANT, Maven** build scripts, providing logging facility using **Log4j** and Writing **JUnit** test cases.
- Hands-on experience in Source Code Management, Creating Branches, versioning, tagging and managing Repositories using **GIT, Bitbucket.**
- Extensive experience working in Software Development Life Cycle (SDLC) by using **Agile, Scrum** and **Waterfall methodologies.**
- Strong interpersonal and communication skills and self- motivated individual showing ability to learn and use new technologies and frameworks in considerably less time.

TECHNICAL SKILLS:

Java&J2EE Technologies	Core Java, Java Server Pages, Servlets, JDBC, Java Beans, Multi-threading, Event Handling, Swing Web Services
AWS Cloud Technologies	EC2, Elastic Beanstalk, IAM, Cloud Watch, Cloud Trail, Pivotal Cloud Foundry, Cloud Formation, EBS, S3, Glacier, Route53, VPC, Lambda, Auto Scaling, Dockers, Redshift, DynamoDB, Amplify, SNS, SQS, SWS, SES
Web Technologies	JSP, Servlets, Struts, Spring, EJB, JMS, AJAX, JSTL, HTML, CSS, XML, XSL, XSLT, JavaScript, JAX-RPC, Nodejs, React, AngularJS, JavaScript, jQuery, and Bootstrap
Application Servers	Web Logic, Apache Tomcat, Web Sphere and JBoss
Build Tools & IDEs	Gradle 3.4.1, PCF, CI/CD, Azure, Google cloud, Kubernetes, Docker, Jenkins 2.x, Maven, Ant, Eclipse, Net Beans, IntelliJ, OpenShift
Databases	MySQL, MS SQL Server, SQL Plus, Oracle, DB2, MongoDB, Cassandra
Frameworks	Hibernate, Spring Boot, Spring MVC, AngularJS, Node JS, Struts 1.1/2.0
Testing	JUnit 4.1, J-Mock, Easy Mock, Spring Test
Cloud Technologies	Amazon EC2, S3, EBS, IAM, SQS, DynamoDB
Design Methodologies	Rational Unified Process, Agile, Scrum/Kanban, Test Driven Development
Version Control	Rational Clear Case, SVN, CVS, VSS, Team Foundation Server, GIT and Bitbucket.
Operating Systems	Windows Unix, Linux

PROFESSIONAL EXPERIENCE:

Client- Verisk, Jersey City, NJ

April 2022 - Present

Role-Senior Java Full Stack Developer

Responsibilities:

- Worked with AWS (VPC) and **Database Subnet Group** for isolation of resources within the Amazon **RDS Aurora DB** cluster and created notifications, alarms for EC2 instances using **Cloud Watch**.
- Used **AWS Beanstalk** for deploying scaling web applications and services developed with **Java**.
- Created **S3 buckets** for EC2 instances to store all the content including **HTML pages, images, CSS files and script files**.
- Have replaced the Java Messaging Service (JMS) calls with **AWS SQS** and used **AWS SDK** to connect with Amazon SQS for bulk email processing.
- Developed API for using AWS **Lambda** to manage the servers and run the code in the DB.
- Involved in developing functions for Amazon Lambda to manage some of the AWS services.
- Captured **Amazon Machine Images** (AMI's) of EC2 Instance for **snapshots** and creating **clone's** instances for their application elsewhere.
- Created and managed a Docker deployment pipeline for custom application images in the **Cloud** using **Jenkins**.
- Created and worked with various SQL and NoSQL databases such as AWS **RDS Aurora DB cluster, MySQL, DynamoDB, MongoDB** and connected to the database through DB Instances using the AWS Java SDK.
- Responsible for creating **SOAP** and Restful Web services with **WSDL, SOAP, JAX-WS, CXF and JAX-RS**.
- Consumed SOAP web services and **RESTful** JSON web services to create the automated report.
- Developed modules using **Core Java APIs, Java collection, Java 8(Streams), multi-threading, and object-oriented designs** and managed **GitHub** Projects.
- Configured **Docker container** for automated testing purposes.
- Developed views using **Bootstrap** components, **Angular-UI** and involved in configuring routing for various modules using **angular UI router**.
- Created Custom Directives in **Angular-JS**, making use of Modules and Filters objects according to the application requirement. Involved in making **Spring** and **Hibernate** enhancements to existing applications Developed unit test cases using **Mocha** and **Karma** as unit test runner for various application modules.

- Designed and Developed UI for Portfolio Review Dashboard application using **Angular-JS, HTML, CSS, Bootstrap, LESS, JavaScript, Ajax** and **jQuery**.
- Utilized **Angular-JS** framework to bind **HTML** template (views) to JavaScript object (models). Implemented continuous deployment system with Jenkins, **AWS: Code Deploy, Ops Works**, and **Packer** for deployment of Java Applications.
- Developed **CI/CD** system with **Jenkins** on **Kubernetes** environment, utilized **Kubernetes** and **Docker** for the runtime environment for the **CI/CD** system to build, Test and Deploy.
- Unique experience with Pivotal Cloud Foundry and Open Shift/**Kubernetes** architecture and design, troubleshooting issues with platform components (PCF), and developing global/multi-regional deployment models and patterns for large-scale developments/deployments on Cloud Foundry and OpenShift/Kubernetes
- Scheduled, deployed, and managed container replicas onto a node cluster using Kubernetes.
- Involved with teams developing front end using the **JSF, JSTL, XML, HTML5, CSS3, JavaScript, jQuery**, and **AngularJS**.
- Involved in the development of real time streaming applications using Apache Flink, Kafka, Hive on distributed Hadoop Cluster.
- Migrated from SVN to **GitHub** with merge and version and used **Jenkins** for **continuous integration**.
- Implementing a **Continuous Delivery** framework using Jenkins and Maven in multiple environments.
- Worked with CQL to execute queries on data persisting in the Cassandra cluster.
- Performed Unit Testing using **Junit** and interacted with **QA** for testing.
- Good experience in debugging the application by running the server in debug mode and having the experience in usage of **log4J** to persist the data in log files.
- Involved in implementing validations, exception handling.

Environment: Java, AWS (EC2, S3, Lambda, Glacier, VPC, EBS, RDS, ELB), JSF, JSTL, XML, HTML5, CSS3, Ajax, JavaScript, jQuery, AngularJS, JSON, Junit, MYSQL, Cassandra, JUnit, Maven, Spring, Hibernate, WebSphere, Web Services.

Client-American Airlines, Fort worth, TX

Dec 2020 – Mar 2022

Role- Java Full Stack Developer

Responsibilities:

- Developed messaging module using **Spring JMS** and **ActiveMQ** to exchange information in more reliable and asynchronous ways in Enterprise Applications.
- Used **Simple storage services (S3)** for storing **snapshots** and Configured S3 lifecycle of Applications & Databases logs, including deleting old logs, archiving logs based on retention policy of Apps and Databases.
- Developed code with **Java SDK** to connect with AWS Services. Worked with S3 for storing and retrieving data stored in the S3 bucket's, **AWS SQS** for bulk email processing, Data backup and archiving on AWS using S3 and **Glacier** and **Dynamo DB** to store the data for metrics and backend reports.
- Worked with **AWS API Gateway** for implementing the **Micro service architecture** and utilized ECS to deploy the **Docker** containers onto the servers.
- Migrating the previous application deployment process and changing it to **AWS Amplify**.
- **AWS Lambda** was utilized for serverless implementations, where the functions were triggered when the database tables were updated, and **AWS Cloud Watch** was utilized for alarms.
- Used **Spring beans** to encapsulate business logic and implemented application **MVC architecture** using **Spring Boot** framework.
- Used **JAX-RS** for creating **RESTful** web service where the request and response are in **JSON** format.
- Migrating existing application into **REST/HTTP** based **Micro service** architecture leveraging Spring Boot capabilities.
- Extensively used **java multi-threading** to implement batch Jobs with **JDK** features.
- Implemented the function to send and receive AMQP messages on **RabbitMQ** synchronously and asynchronously and send JMS message to Apache **ActiveMQ** on the edge device.
- Designed and developed the persistence layer using **Hibernate** persistent objects, for interaction with the databases.
- Implemented data reading, saving and modification by stored procedures in **MySQL** database and Hibernate criteria.
- Integrated Apache Kafka and Apache Flink as an asynchronous messaging and data processing system, implementing a Publish/Subscribe architecture.
- Collaborated in developing authentication and security mechanisms for Apache Kafka and Apache Flink, ensuring secure data ingestion and processing.
- Worked as Angular SPA developer for front-end as well as to call microservices for back-end communications.
- Minor changes in microservices in **Spring Boot** to support changes in **Angular**.
- Working on Confidential **Angular** core framework development to provide a standard platform for developers.
- Build highly available content distribution sites by using **CI/CD** tools like **Chef, Ansible, Docker, Maven, Jenkins, Jira, Kubernetes, OpenShift**.
- Developed code for Responsive web design in JavaScript using frameworks like Angular.js, **React.js**. Configured **Docker** containers and Kubernetes to manage dozens of micro services.

- Make pluggable UI **microservice** for each platform which should solve the monolithic problem of seed generation and create Docker image and deploy them into Kubernetes using Angular.js 2.0.
- Used Jasper reports and Jfree charts to generate various statistical reports and Trained staff on effective use of Jenkins, Docker, GitLab, Kubernetes, OpenShift.
- Developed the Docker based micro services deployment modules with the Jenkins, Kubernetes, and Ansible based pipelines/frameworks.
- Developed test cases by using **JUnit** and **spring integration** test framework.
- Implemented **Test Driven Development** using **JUnit**, Advanced Rest Client and **Log4j** in developing test cases and determining application functionality.
- Participated in the design of user interface of the application using **HTML5, CSS3, JSF, JavaScript and AJAX**.
- Worked with **GIT** Version control system to track various aspects of the project.
- Developed build script using **MAVEN** to build, package, test and deploy application in application server.
- Utilized **Jenkins** for Continuous Integration and Continuous Delivery.
- Used **Agile methodology** to develop the application.

Environment: Java, J2EE, Hibernate, Spring, Junit, Mongo DB, Cassandra, Web Logic, React, HTML5, CSS3, JavaScript, jQuery, Apache Flink, Linux, Kafka, Eclipse, AJAX, Angular JS, JSON, JSF, AWS (EC2, S3, VPC, RDS, Dynamo DB, Route53, EBS, Elastic, Load Balancer, Auto Scaling groups, SQS).

Client- San Bernardino County, Los Angeles, USA

Jan 2019 – Nov 2020

Role- Java Backend Developer

Responsibilities:

- Responsible for creating High level and Component level design documents.
- Involved in developing SQL queries and stored procedures to Insert, fetch, and update records into the database using **Spring JDBC**.
- Developed application using best practices, design patterns and test-driven development.
- Used **Spring Batch integrated with Quartz** to schedule job to generate a fixed length file and FTP it to the mainframe location.
- Designing and developing **REST** based Web service calls using **Jax-RS**.
- Designed and developed **SOAP web service** to provide data to other systems.
- Provided spring based **RESTful** Web service.
- Experience in implementing the **Angular JS** in creating animations based on CSS classes.
- Used routing feature of **Angular JS for Single page application (SPA)**
- Used **AJAX** and **JSON** to make asynchronous calls to the project server to fetch data on the fly.
- Participated in wireframe reviews with UX team to understand the requirements.
- Used **GIT** for version control.
- Used jQuery and Ajax for service calls on pages to interact with the server for information.
- Developed Complex database objects like Stored Procedures, Functions, Packages and creating new web components and features.
- Involved with bug fixing on functionality, performance and designing issues with JavaScript and jQuery.
- Designed 10 Unique themes with rich and flexible to accommodate different scenarios in which the user might want to display the data.
- Developed the front-end pages using **HTML5, CSS3, JavaScript, jQuery, responsive web design and Bootstrap**.
- Utilized Apache Kafka Connect to integrate data sources and sinks with Apache Kafka, facilitating seamless data ingestion and streaming.
- Worked on Implementing the JavaScript/jQuery frameworks such as **Angular JS for MVW/MVC** framework.
- Used **Micro services** architecture to break down the monolithic application to independent components.
- Used **Maven** for Project management and build automation.
- Followed **Agile & Scrum Methodology** for development of the applications.
- Used **Liquibase** for tracking, managing, and applying database changes.
- Automated test cases related to JDBC Connections, JMS, and Web Services in **Apache JMeter**.
- Created purge scripts to purge old data from the Database.
- Responsible for interfacing with various teams and groups to resolve defects.
- Responsible for preparing the release implementation plan and providing support during Production implementation.
- Coordinated with onsite and offshore teams.

Environment: Java/J2EE, Spring MVC, Spring JMS, Spring JDBC, Spring Batch, SOAP Web Services, HTML5, CSS3, JavaScript, Angular JS, IBM Web sphere MQ, Web logic 12.1.1, XML, Apache JMeter, SQL Server 2012, Maven, Liquibase, SoapUI, TFS, WinSCP, Eclipse 3.8 and UNIX.

Role- Java Full Stack Developer

Responsibilities-

- Hibernate as an ORM tool for OR mappings and configured **hibernate.cfg.xml** and **hibernate.hbm.xml** files to create the connection pool.
- Define data transfer process through asynchronous web service using **REST (HTTP)** and tested the Restful Services using Webpage by using **XML and JSON** format.
- Implemented Collection Framework and used the **Thread, I/O** functionalities for meeting access.
- Written SQL queries for performance improvement and refactored the queries for business reporting for different databases such as **Microsoft SQL, Oracle** data at enterprise level.
- Integration with the **J2EE Services** layer of Unity Platform, using spring application context.
- Extensively used **Eclipse** with Debugging and Development.
- Developing Docker file for different end points and validating them through the docker-central to run the Jenkins job with given parameter and deploy job to the Kubernetes.
- Created multiple Kubernetes Clusters in AWS and deployed a Docker Image on top of Kubernetes Cluster for testing purposes.
- Develop the **UI** component architecture for developer framework using **Angular 4, Typescript, HTML5, CSS3 and Bootstrap**.
- Created custom, self-contained, reusable, and testable **Angular 4 modules, controllers, directives, and services** to implement key functionalities for customer account summary.
- Used **Angular 4 Http services** for asynchronous validations for the input fields of the forms with the data that existed in the database.
- Took part in setting up the routing configuration using **Angular 4 router** for various views and sub views.
- Worked simultaneously in both production and development teams and took part in designing and developing dynamic web pages using **HTML5, CSS3, Bootstrap, SASS, JavaScript, jQuery, Angular 4** for single page applications.
- Involved in Writing jQuery-based Ajax Requests using jQuery. Get (URL, data, callback, type)
- Worked on creating **Angular custom pipes** to sort the history of various customers through order of date, year, and month, NgFor for display of the history of customer details in tables.
- Involved in web application development for backend system using **Angular 4, Angular CLI, Webpack, HTML5, TypeScript, WIJMO, SASS and CSS3**.
- Used **Angular 4** Reactive forms to implement complex **forms** and performed the validations using Form Builder.
- Used various Bootstrap components such as calendars, masks, uploaders, sliders, alerts, and modal dialogs for developing the UI.
- Consumed RESTFUL web services using **Angular HTTP** Module and transformed the response using **RXJS** operators.
- Created **Angular Http Client** interceptors to add necessary JWT tokens for the outgoing requests from UI.
- Defined **Angular routes** using **Router** module for components at module level to enable lazy loading for modules and components.
- Developed **Angular services, controllers** and created models for two-way data binding.
- Designed user Interface using **Angular UI components** such as tabs, grids, dropdowns etc. and configured the routing service using **Angular-JS router**. Involved in developing Angular-JS directives to do reusable UI components.
- Built a RESTful API to save and retrieve agent information in Java using Spring MVC, Apache CXF and JAX-RS.
- Implemented **SOA** to develop **REST Based Web services** using **Apache Axis**
- Coded web services to expose **Oracle** DB Functions and Store procedures.
- Created DB Links to interact with other **Oracle** databases in the distributed database system. Involved in design and review of **UML** Documents like **USE cases, sequence, communication**, deployment diagrams etc.
- Worked on **SQL** for core business logic database storage procedure, and used **Oracle Database**
- Developed **MongoDB** for data buffer and involved in configuration and deployment of **Oracle** as the database, wrote stored procedures using **PL/SQL** for data entry and retrieval in Reports module.
- Mapped DTOs to **Oracle** Database tables and transferred Java data types to SQL data types by creating **Hibernate** mapping **XML**.
- Used **Oracle** database and used the **Stored Procedures and Triggers** in the application.
- Developed stored procedures, triggers, and database scripts in **PL/SQL** for **CRUD** operations of the data in the **Oracle** database.
- Managed Source Control and Version Control using **CVS**.
- Responsible for unit testing using **JUnit** and building test cases and templates for **integration** testing.
- Deployed the project in the **WebLogic** Application server.

Environment: JDK, JSP, Spring, Hibernate, HQL, Web Services (REST), JSON, JDBC, JavaScript, HTML, servlet, CSS, JSP, Spring MVC, Servlet XML, AJAX, Eclipse, WebLogic PL/SQL, Oracle 10g, Windows, CVS, Maven, RDMBS.

Client- Ford Motors-Chennai, India

Sep 2015 – Dec 2016

Role- Java Developer

Responsibilities-

- Actively involved in various phases of Software Development Life Cycle (SDLC) such as Design, Analysis, Development and Testing.
- Actively participated in the daily **SCRUM** meetings with our team to produce quality deliverables within time.
- Implemented **Micro Services based Cloud Architecture** using **Spring Boot with Lambda**.
- Designed and developed **Java 8** business components and **RESTful** service endpoints using **Spring boot**.
- Moved existing **AngularJS controllers** and **services** to **Angular 4 components** for more responsive and less dependency.
- Updated the application with new features of **NodeJS**.
- Worked on some of the new features of **NodeJS** like new if else syntax, ng-templates, form validators.
- Implemented **RESTful and SOAP** based web services using for JAX-RS and JAX-WS respectively.
- Implemented **RESTful Web Services** to retrieve data from client side using **Micro Services architecture**.
- Designed and implemented applications using **Spring Boot, Spring Integration, Spring MVC, Spring IOC, Spring Annotations, Spring AOP, Spring Transactions, Hibernate**.
- Validations are done using **SoapUI** and Ready API testing tool framework in different environments.
- Consumed Rest based services with **Angular2.0 using HTTP** services.
- Migrating existing legacy **Lambda into Micro Services Architecture with Spring Boot**.
- Developed Micro-Services based architecture to enable the application to be deployed on **AWS**.
- Designed, built, and deployed a multitude application utilizing almost all of the AWS stack (Including **EC2, R53, S3, RDS, Dynamo DB, SQS, IAM, and EMR**), focusing on high-availability, fault tolerance, and auto-scaling).
- Developed **AWS S3** to copy project artifacts into **S3** bucket.
- Written SQL Queries and stored procedures to interact with **Oracle DB**.
- Experience in developing applications, automated scripts leveraging **Mongo DB**.
- Built **dynamic DB** schemas and maintained sessions by **Mongo DB**.
- Involved in the development of the UI using **JSP, HTML5, CSS3, JavaScript, Ajax and AngularJS**.
- Used **CSS3** for describing the presentation of Web pages, including colors, layout, fonts, and Validations for the Client Side were done using **NodeJS**.
- Developed the module as SPA using **Angular JS** with **Angular2.0** routers and controllers.
- Automated build process through **Maven Script build framework**.
- Worked on **Log4J** to validate functionalities and **JUnit for unit testing**.
- Actively used the defect tracking tool **JIRA, Bamboo and Stash** to create and track the defects during **QA** phase of the project.
- Worked with **Web Sphere** application server that handles various requests from Client and used Jenkins to perform continuous Integration.
- Used **GitHub** to maintain the version of the files and took the responsibility to do the code merges from branch to trunk and creating new branch when new feature implementation starts.

Environment: Java, Spring, Spring Boot, Spring Security, Spring Batch, Spring MVC, XML, JSON, GitHub, Hibernate, Oracle, Mongo DB, JUnit, Gradle, Jenkins, Web Sphere, JMS, Restful, WADL, SOAP, WSDL, SoapUI, Microservices, AWS, HTML5, CSS3, JavaScript, Angular, NodeJS JSP, Java 8, OOPS, Agile Methodology, Log4J, JIRA and STS, Selenium, Cucumber.

EDUCATION:

Jawaharlal Nehru Technological University, Hyderabad, India

2011 – 2015

Bachelor of Technology in Computer Science Engineering
