

Elu Mele
MS SQL /BI/DW DEVELOPER
Email: ella.tekalign@gmail.com
Phone: (240)645-3197

Professional summary

- Over 8 years of experience in developing reporting solutions, ETL processes, business intelligence (BI) solutions, and enterprise data warehouses across multiple industries.
- Expert in designing and managing relational databases, ensuring optimal table normalization and denormalization using SQL Server Management Studio (SSMS).
- Skilled in leveraging Dynamic SQL, Cursors, Views, Stored Procedures, User-Defined Functions (UDFs), Triggers, Indexes, and Temporary Tables in SSMS to enhance front-end applications and reporting efficiency.
- Proficient in optimizing query performance using Execution Plans, SQL Profiler, and Database Engine Tuning Advisor.
- Extensive experience in designing and utilizing various data visualizations—including tabular charts, donut charts, histograms, and maps—to effectively convey business insights using Tableau, Power BI, SSRS, and Excel.
- Strong expertise in MS SQL Server Integration Services (SSIS) for ETL processes, including data migration, transformation, validation, and reporting support.
- Deep understanding of enterprise data warehouses and data marts, including OLTP/OLAP systems, dimensional modeling, and schema designs (Star/Snowflake) within landing and staging environments.
- Proficient in SSIS Control Flow components (Execute SQL Task, Foreach Loop Containers, Script Task, File Task, Expression Task, etc.) and SSIS Data Flow components (Derived Column, Multicast, Conditional Split, Lookup, Data Conversion, etc.).
- Well-versed in implementing SSIS features such as Event Handlers, Logging, Checkpoints, Breakpoints, and Debugging for efficient workflow execution.
- Skilled in utilizing Slow Changing Dimensions (SCD) and Change Data Capture (CDC) techniques for dynamic data loading and transformation.
- Strong familiarity with Agile, Scrum, and Waterfall methodologies, along with all phases of the Software Development Lifecycle (SDLC).
- A highly analytical problem solver with a keen ability to present insights clearly and concisely.

Technical Skillset

- RDBMS: MS SQL Server 2022/2019/2016/2012/2008R2/2008/2005, MySQL, Oracle
- Reporting Tools: SQL Server Reporting Services (SSRS), Excel Tableau, Power BI
- Languages: T-SQL, PL/SQL, C++, C#
- ETL: Server Integration Service (SSIS), Data Transformation Services (DTS), SQL Server Data Tools (SSDT), Data Quality Services, Talend
- Data Warehouse/OLAP: SQL Server Analysis Services (SSAS)
- Development Platforms: Visual Studio, SharePoint

- Project Management: JIRA, Slack, TFS, Microsoft Project, Microsoft Visio

01/2024 - Present

Company: Barclays

SQL/MSBI Developer

Responsibilities

- Worked on gathering and documenting project requirements from stakeholders and transformed them into functional and non-functional specifications for BI reports and applications and transformed them into deliverable solutions.
- Participated in data mapping process, figuring out and documenting meanings of columns and tables as well as relationships among them.
- Responsible for extracting data from internal and external resources using T-SQL and PL/SQL based on business requirements such as Stored Procedures, User Defined Functions (UDFs) and Views
- Tuned the performance of query statements by analyzing execution plans and logs/statistics in SQL Server Profiler/Database Engine Tuning Advisor
- Designed and developed ETL packages to realize full loading and incremental loading to convert and migrate data, transform data using lookup, merge joins, derived columns, and built the target data warehouse and data marts based on Star Schema
- Involved in designing ETL packages using breakpoints and analyzing progress to catch error information by SQL command in SSIS that sends an e-mail message when an error or a warning occurs or when a task fails.
- Developed reporting solutions for different stakeholders from mock-up demos till deployment to analyze different dimensions such as claims, transactions, appointments, supply, assets, and properties both in SSRS and Tableau for Data Visualizations
- Developed reporting solutions including tabular reports, matrix reports, using cascading parameters to achieve Drill-down Reports, Drill-through Reports, as well as Linked Reports for security concerns in SSRS 2008/2012 for the front-end application usage.
- Worked with QA team, clarified and solved the issues, delivered to the project manager for approval and feedback.
- Optimized SSRS report performance by snapshots and indexes while writing query statements.
- Optimized report performance by refining queries in T-SQL, removing redundancies, retrieving only essential data, and using SQL methods efficiently.

06/2019 – 07/2023

Company: AT&T

SQL/Data Warehouse Developer

Responsibilities

- Developed ETL workflows in SSIS to populate dimensional and fact tables from various sources, including CSV, Excel, and FTP-based files.
- Developed ETL workflows in SSIS to populate dimensional and fact tables from various sources, including CSV, Excel, and FTP-based files.
- Automated data transfer processes via FTP and scheduled SSIS jobs, ensuring seamless integration between systems and reducing manual effort.
- Created complex SSRS reports, including tabular reports, drill-through reports, and parameterized reports, to meet business reporting needs.
- Followed full SDLC methodology, participating in design, development, testing, and deployment of BI solutions, ensuring data accuracy and business alignment.
- Built Power BI dashboards and reports to provide real-time business insights and analytics, improving decision-making for key stakeholders.
- Maintained data quality and consistency by implementing data validation, cleansing, and transformation strategies before loading into the data warehouse.
- Assisted in database administration tasks, including indexing strategies, query optimization, and security configurations to improve overall database performance.
- Provided technical support and documentation to help end users understand and interact with reports effectively.
- Collaborated with cross-functional teams to define key performance indicators (KPIs) and ensure alignment with business objectives.

01/2017 - 04/2019

Company: Social & Scientific System

SQL/BI Developer

Responsibilities

- Designed Data Warehouse schemas such as star schema and snowflake by using Oracle Data
- Developed ETL workflows to load data into Dim and Fact tables using SSIS Package
- Extracted data from diverse data sources such as CSV, Excel and Text file from Client servers and FTP
- Used FTP to transfer large volumes of data to and from different servers.
- Creating Tabular reports with SQL Server Reporting Services (SSRS).
- Deployed reports created report schedules and subscriptions. Managing and securing reports using SSRS.

- Developed thorough knowledge by working on Full Life Cycle of the Software Development Life Cycle (SDLC) phases namely Analysis, Design, Coding and Testing.
- Developed and deployed SSIS packages using proper control and data flow elements with error handling.
- Enhanced and deployed SSIS Packages from development server to production server
- Identified and resolved issues related to SSIS package configuration and deployment.
- Maintained data integrity by performing data validation checks.
- Wrote complex T-SQL queries and used in stored procedures and triggers and modified existing ones.
- Developed C level visualization such as Dashboards and Reports using Power BI
- Deployed Power BI reports and Dashboards to Power BI Service.
- Created and Managed Power BI new and traditional workspaces.

Education:

Bachelor's degree in business and computer science
