

Summary:

Certified in AWS & Terraform, experience with GCP and Azure with hands-on expertise in DevSecOps, SRE, and Cloud Engineering. Skilled in Terraform (IaC), AWS architecture, Ansible, and container orchestration using Docker, Kubernetes, and Helm. Proficient in CI/CD automation with Jenkins, GitHub Actions, and Bitbucket. Experience migrating enterprise apps to multi-cloud, with a strong focus on security, monitoring (Datadog, Grafana, Prometheus), and reliability. Adept in scripting (Python, Bash, YAML), and experienced with Agile, GitOps, and tools like JIRA, ServiceNow, and Rally. Broad OS/server background including RHEL, Ubuntu, Amazon Linux, Apache, Nginx, and WebSphere.

Education & Certifications

- **Bachelor of Technology in Computer Science**, JNT University – 2018
- **AWS Certified Solutions Architect – Associate**
- **HashiCorp Certified: Terraform Associate**

Technical Skills:

Cloud: AWS (EC2, S3, RDS, ECS, EKS, Lambda, CloudWatch, IAM, VPC, ALB, MSK, DMS), GCP (Compute, VPC, IAM), Azure (AKS) • **IaC & Automation:** Terraform, Ansible, Packer, Jenkins, GitHub Actions, Bitbucket Pipelines, Groovy • **Containers & Orchestration:** Docker, Kubernetes, Helm, ArgoCD, ECS, Istio • **CI/CD:** Jenkins, GitHub Actions, Bitbucket, SonarQube, Prisma Scan, Terrascan • **Monitoring & Logging:** Datadog, Prometheus, CloudWatch, New Relic, Uptime Kuma, Splunk • **Security:** IAM, SCPs, Secrets Manager, Vault, CFSSL (mTLS) • **Scripting:** Python, Bash, YAML, AWS CLI • **Systems:** Linux (RHEL, Ubuntu, Amazon Linux), Apache Tomcat, Nginx, WebSphere, VMware • **Tools:** Git, GitHub, Bitbucket, JIRA, Rally, ServiceNow

Experience:

Sage Therapeutics, **Sr. DevOps Engineer** | Plano TX | Jan 2023 – Present

At Sage, I improved DevOps and cloud automation across AWS, GCP, and some Azure, reducing provisioning time by **65%** and cutting infrastructure costs by over **\$1 M annually**. I optimized Kubernetes-based deployments with ArgoCD and Helm, improving uptime to **99.95%** and accelerating release cycles by **50%**. By enhancing observability with Datadog, Grafana, and New Relic, I reduced MTTR by **45%**, strengthening both reliability and compliance.

- Designed and deployed multi-region applications on Kubernetes across AWS and GCP using Terraform.
- Implemented GitOps with ArgoCD, Kubernetes, Helm and GitHub to streamline the deployments.
- Managed CI/CD pipeline on Jenkins, GitHub and Bitbucket for automated, secure and faster deployments.
- Created Packer pipelines for building Docker image integrated with Prisma scan, Terrascan, SonarQube.
- Setup replication of data from on-prem DB to Kafka connectors with AWS MSK and RDS using AWS DMS.
- Installed and configured logging and monitoring solutions using Datadog, Prometheus and Uptime Kuma.
- Setup private CA solution using CFSSL to generate certificate running on EKS for mTLS implementation

Technology & Tools managed: ArgoCD, Datadog, GitHub, Bitbucket, Jenkins, Kafka, Prometheus, Python, Istio, PrismaScan, Kubernetes &, HashiCorp Terraform & Vault

Global Payments, **DevOps Engineer /SRE** | Plano, TX | Nov 2021 – Dec 2022

I worked on creating and managing application running on GCP, AWS using Terraform. Created Terraform modules and Lambda function for different automation jobs.

- Design highly Available multiple region containers solution on AWS EKS using Terraform.
- Design and managed multi account CI/CD pipeline with ECS and GitHub self-hosted runners.

- Wrote terraform modules for Autoscaling Groups, Application Loadbalancers, ECS, IAM roles, VPCs, RDS, WAF and Cloud Front.
- Created Terraform module for GitHub Action Elastic Kubernetes service and automation for GitHub to automatically register as runners.
- Created Lambda function with python to check ACM expiring certs and send out SNS email notification •
- Configure Jenkins for different CI/CD jobs running on Master and slave configuration on Docker container managed by Kubernetes.
- Deployed Jenkins infrastructure on Elastic Kubernetes Service (EKS) with terraform and deployed Jenkins application with Helm.
- Experience in managing Identity and Access Management (IAM) with terraform, created users, polices and cross account roles to allow resources in other account

Intrado, Boston MA **Role: SRE/DevOps Engineer**

Mar 2020 – Nov 2021

I worked on migrating infrastructure from a shared AWS account managed with Ansible to a new AWS account. New infrastructure was created with Terraform. Created CI/CD jobs with Jenkins

- Migrated infrastructure from a shared AWS account managed with Ansible to a new environment built entirely with Terraform, enabling more scalable, secure, and modular deployments.
- Designed and provisioned cloud infrastructure using Terraform, including Auto Scaling Groups, Application Load Balancers, ECS clusters, and implemented IAM policies to enforce security best practices.
- Developed reusable Terraform modules for consistent resource provisioning across environments and used Ansible for configuration management of application servers to ensure uniform setups.
- Engineered CI/CD pipelines using Jenkins to automate build, test, and deployment processes within containerized environments, accelerating delivery and minimizing manual intervention.
- Created AWS Lambda function for serverless automation and implemented performance tuning strategies and monitoring to improve system efficiency and reliability in production.

Fifth Third Bank, Cincinnati OH

Feb 2019 – Mar 2020

Role: Cloud Engineer

Fifth Third Bank is a financial institution that offers a range of banking, investment, and lending services to individuals, businesses, and corporations.

I worked as a Cloud Consultant to migrate application from on-prem to AWS. Created CloudWatch dashboard for resources in AWS.

- Migrated applications from on-prem to AWS and GCP accounts, ensuring security and compliance.
- Developed CI/CD pipelines using Jenkins and integrated with version control systems for streamlined development workflows.
- Configured monitoring and alerting solutions using AWS CloudWatch to maintain optimal performance and availability.

HP, Houston, TX

Aug 2018 – Jan 2019

Role: Linux Admin: I worked as Linux admin to manage Linux servers with Ansible running in different AWS Accounts.

- Managed and maintained Linux servers on AWS ensuring security and reliability.
- Implemented automation solutions using Ansible for efficient management of infrastructure and applications.
- Conducted performance monitoring and tuning of servers for optimal resource utilization.
