

GANESH KAKKIRENI, Salesforce Developer

Charlotte, United States, 3035941252, ganesh.k8730@gmail.com

PROFILE

Three years of expertise creating, planning, and implementing scalable Salesforce solutions have equipped this Salesforce developer. strong proficiency with Visual-force, Apex, Lightning Web Components (LWC), SOQL/SOSL, and integrations. competent in debugging and enhancing Salesforce apps for usability, security, and performance. Knowledge of Agile approaches and best practices to collaborate with stakeholders to translate business requirements into technical solutions.

EMPLOYMENT HISTORY

Jun 2024 — Present	Salesforce Developer, Global Infotech LLC - Built and maintained Lightning Web Components (LWC) to improve internal apps' UI/UX. - Automated complex business procedures using batch processing and bespoke Apex triggers. - Optimizing SOQL queries improved application speed and stopped governor restrictions from being overridden. - REST APIs were used to debug and fix integration problems between Salesforce and external apps. - Created unique Visualforce pages for efficient data management and user interaction. - Increased deployment efficiency by working with DevOps teams to deploy CI/CD pipelines. - To attain high-quality code standards, code reviews were carried out and best practices were enforced. Real-Time Use Case: - Using Apex and Process Builder, an automated lead assignment system was created, resulting in a 40% reduction in lead response time. - Used middle-ware-based connectivity to fix problems with Salesforce data syncing with an external CRM.
Jun 2020 — Jul 2022	Jr. Salesforce Developer, Northwin Technologies Pvt, Ltd. Hyderabad - Developed custom Salesforce applications using Apex classes, controllers, and triggers to facilitate business processes. - Developed dynamic reports and dashboards to display real-time business decision-making information. - Supported data migration projects, ensuring data integrity during the transfer of records from legacy systems. - Optimized and debugged Apex code and SOQL queries for improved system performance. - Collaborated with Agile teams, sharing requirement gathering and sprint planning. Real-Time Use Case: - Use LWC to put in place an event tracking system that lets users keep an eye on real-time consumer interactions. - Using Batch Apex and Future Methods, a performance problem with Apex bulk processing was resolved, cutting processing time by 50%.
Jan 2019 — Feb 2020	Salesforce Intern, Goalstreet Pvt, Ltd. Hyderabad - Contributed to the creation of Apex triggers for field updates and validations. - Process builders and custom Salesforce processes were developed to automate the approval process. - Learned how to debug permission set management and user access problems firsthand. - Provided end users with training and technical documentation on recently added Salesforce functionalities. Real-Time Use Case: - Implement a customized case escalation process to speed up the processing of customer support requests. - A duplicate record issue was fixed, enhancing platform-wide data integrity.
