

Devops Engineer

Name: Girish Kumar Patchikoru

Ph.no: 361-905-5644

Email id: girishdevcode@gmail.com

LinkedIn: www.linkedin.com/in/girishdevcode/

PROFESSIONAL SUMMARY

- Results-driven **DevOps Engineer** with 5 + years of experience in automating, deploying, and maintaining cloud-native applications across **AWS, Azure, and Kubernetes** platforms.
- Proficient in **GitOps workflows** using **ArgoCD** and **Flux** for declarative infrastructure management, enabling automated and version-controlled deployment processes.
- Hands-on experience with **AWS cloud services** including **EC2, S3, VPC, IAM, Lambda, CloudWatch, CloudTrail, CodeDeploy, and Glacier**.
- Played a key role in automating deployments on **AWS** using **Bitbucket, Terraform, Ansible, and Jenkins**.
- Skilled in infrastructure provisioning using tools like **Terraform** and **CloudFormation**.
- In-depth knowledge of AWS services such as **EC2, IAM, S3, Elastic Beanstalk, VPC, ELB, RDS, EBS, and Route 53**.
- Extensive experience with container orchestration platforms, including **Kubernetes, AWS EKS, Azure Kubernetes Service (AKS), and Google Kubernetes Engine (GKE)**, optimizing containerized workloads for scalability and reliability.
- Installed and configured **Nexus Repository Manager** for artifact sharing and management across teams.
- Experienced with configuration management tools such as **Ansible, Chef, and Puppet** to ensure consistency and automation in system configurations.
- Proficient in scripting and automation using **Python, Bash, and PowerShell**, helping streamline operational tasks and reduce manual efforts.
- Experienced in log monitoring and analysis using the **ELK Stack (Elasticsearch, Logstash, Kibana)** and **Splunk**.
- Integrated **DevSecOps** practices using tools like **Snyk, Trivy, and HashiCorp Vault**, enhancing security and ensuring compliance throughout the software development lifecycle.
- Managed secrets and credentials securely using **HashiCorp Vault** and **AWS Secrets Manager**.
- Implemented code quality checks by integrating **SonarQube** with Jenkins pipelines.
- Familiar with project management and ticketing tools such as **JIRA** for tracking and managing tasks.

TECHNICAL SKILLS

Programming Languages	Bash, Python, Golang, PowerShell
Infrastructure as Code (IaC)	Terraform, CloudFormation
Configuration Management	Ansible, Chef, Puppet
Cloud Services	AWS (EC2, S3, RDS), Azure (VMs, Functions), GCP
CI/CD	Jenkins, GitLab CI/CD, Azure DevOps, GitHub Actions, ArgoCD, Flux CD
Containerization & Orchestration	Docker, Kubernetes, OpenShift, AKS, AWS Fargate, AWS EKS
Artifact Management	Jfrog Artifactory, Nexus
Monitoring and Performance	Prometheus, Grafana, Nagios, Datadog
Logging and Analytics	ELK Stack (Elasticsearch, Logstash, Kibana), Splunk,
Build Automation	Maven, Gradle, Ant
Secret Management	HashiCorp Vault, AWS Secrets Manager, Azure Key Vault

CERTIFICATIONS

- Microsoft Certified: Azure Developer Associate
- Microsoft Certified: Azure Fundamentals
- Oracle Cloud Infrastructure 2025 Certified Foundations Associate
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate

PROFESSIONAL EXPERIENCE

Client: MUFG , New York, NY

Feb 2024 - Till Date

Role: Devops Engineer

Responsibilities:

- Enabled **GitOps** workflows using **ArgoCD** (for declarative Kubernetes app deployments) and **Flux** (for Git-driven state reconciliation), ensuring compliance and enabling easy rollbacks.
- Created and maintained **Terraform templates** for infrastructure provisioning and built **CI/CD pipelines** using **Jenkins** and **Ansible** for seamless application deployment.
- Implemented secure secrets management using **AWS Secrets Manager**, **GCP Secret Manager**, and **HashiCorp Vault**, providing encrypted, centralized, and auditable credential handling across critical systems.
- Strong understanding of **IAM policy creation**, administration, and maintenance.
- Provisioned infrastructure components including **VPC, EC2, S3, RDS, DynamoDB, IAM, EBS, Route 53, SNS, SES, SQS, CloudWatch, CloudTrail**, security groups, and auto-scaling configurations.
- Skilled in managing cloud-native deployments across **AWS, Azure**, and **GCP**, with hands-on expertise in **Kubernetes** clusters (EKS, AKS, GKE) and large-scale container orchestration.
- Played a key role in automating deployments on AWS using **GitHub, Puppet, Chef**, and **Jenkins**.
- Integrated **Snyk** and **Trivy** into CI/CD pipelines for automated security scanning of containers and Infrastructure as Code (IaC) templates.
- Developed numerous **Ansible playbooks** using YAML for automation and executed Ansible scripts to provision **Staging** and **Production** environments.
- Monitored services using **Datadog, Azure Monitor, Prometheus**, and **Grafana**, gathering actionable insights on performance, system health, and infrastructure usage for proactive incident detection and optimization.
- Strong scripting and automation capabilities in **Python, Bash**, and **PowerShell**, enabling efficient environment provisioning and deployment workflows.
- Configured static and dynamic code analysis tools such as **SonarQube (SAST)**, **DAST**, and **OWASP** tools within Jenkins CI/CD pipelines to ensure code security and compliance.

Environment: AWS, Jenkins, Ansible, Terraform, GitHub, Docker, DS, Kubernetes, Nginx, Gitlab, JIRA, GIT, Maven

Client: Icertis Solution Pvt. Ltd , India

Feb 2022-Aug 2023

Role: Devops Engineer

Responsibilities:

- Automated **cloud operations** and **resource management** on Azure using **PowerShell** and **Azure CLI**, scripting deployment tasks to improve system reliability, operational control, and efficiency.
- Utilized **GitLab** for source code management and integrated its built-in **CI/CD pipelines** to automate builds, tests, and deployments, streamlining development workflows and minimizing manual errors.
- Automated infrastructure provisioning and deployments using **Terraform** and **Azure Resource Manager (ARM) templates**, ensuring consistency, compliance, and standardized infrastructure across Azure environments.
- Optimized application performance by integrating **New Relic** and **Datadog APM**, enabling real-time visibility into application health, reducing latency, and enhancing user experience through proactive monitoring.
- Leveraged **Splunk** for advanced data analytics, boosting operational visibility and strategic decision-making, while managing secure authentication and access via **Azure Active Directory**.
- Conducted security assessments using **Fortify, Aqua Security**, and **Checkmarx** for vulnerability scanning, ensuring system integrity and compliance. Utilized **Graylog** for centralized log management to enhance monitoring and troubleshooting.
- Streamlined application lifecycle management using **Helm** for Kubernetes deployments, enabling version-controlled, reproducible packaging and simplifying rollbacks and updates across environments.

- Developed and maintained automation scripts in **Ruby** to handle complex infrastructure tasks and improve system performance and reliability.
- Implemented **Chef** for configuration management, automating system settings and software installations to maintain consistency and compliance across enterprise environments.
- Deployed applications and services on **Google Cloud Platform (GCP)**, leveraging its global scalability and advanced features to enhance application performance and availability.

Environment: Azure, PowerShell, Terraform, New Relic and Datadog, Kubernetes, Splunk, Fortify, Aqua Security, and Checkmarx JIRA, GIT, Maven, MS Build, IIS

Client: Adrian Technologies Pvt Ltd – Chennai, India

Apr 2020 - Jan 2022

Role: Linux Administrator

Responsibilities:

- Installed, hardened, and maintained **Linux servers** across **on-premises, virtualized, and cloud environments (AWS, Azure, GCP)** to ensure high availability and security.
- Automated routine system administration tasks including **backups, monitoring, patching, and user management** using **shell scripting** with **Bash, Python, and Perl**.
- Provisioned and configured **Red Hat, SUSE, and CentOS** servers, including setup of **system resources, storage devices, file systems, and network interfaces**.
- Managed enterprise-level storage using **LVM, RAID configurations, and file systems** such as **ext4, XFS, and Btrfs** to ensure data integrity and performance.
- Handled **package management** with **YUM, DNF, and APT**, and compiled software from **source code** for custom implementations.
- Configured and managed **network services** like **DNS, DHCP, NFS, Samba, SSH, and FTP**, along with **firewall rules** using **iptables, firewalld, and nftables** for secure access.
- Deployed and maintained **system monitoring and logging solutions** using tools such as **Nagios, Zabbix, Prometheus, Grafana**, and the **ELK Stack** for performance visibility and alerting.
- Worked with **virtualization platforms (VMware, KVM)** and **container tools (Docker, Podman, LXD)** to support scalable and isolated environments.
- Managed **user and group permissions**, integrated systems with **LDAP**, and configured authentication using **PAM** and **Kerberos** for secure identity management.
- Applied **security hardening techniques** by managing **SELinux and AppArmor policies**, performing regular **patch updates**, and conducting **system audits** to maintain compliance with **HIPAA** and **PCI-DSS** standards.

Environment: AWS/Azure/GCP, Bash, Python, Perl, RedHat Linux servers, SUSE and CentOS, DNS, DHCP, NFS, Samba, SSH, FTP.

EDUCATION

Texas A&M University–Corpus Christi
Masters in computer Science

August 2023 – May 2025
