PROFESSIONAL SUMMARY

Experienced Full-Stack Engineer specializing in **Python** backend development, front-end architecture, and scalable system design. Expertise in building high-performance APIs, optimizing cloud infrastructure, and automating CI/CD pipelines to streamline deployments. Strong focus on security, reliability, and performance, ensuring seamless production workflows. Skilled in AI integration and system optimization, driving enterprise-scale solutions with efficiency and innovation.

EDUCATION

The University of Texas at Arlington
Bachelor's, Information Science

August 2014 - May 2018

PROFESSIONAL EXPERIENCE

Samsung Electronics America

Full-Stack Developer

Remote

June 2020 - February 2025

- Developed and maintained high-performance microservices for Samsung's connected device ecosystem, improving smart home automation and real-time analytics.
- Designed **FastAPI**- and **Django**-based microservices to process telemetry data from IoT devices, integrating with SmartThings APIs for monitoring and predictive maintenance.
- Built AI-powered chatbots using **LangChain**, **OpenAI API**, and **Rasa**, automating customer support and enabling real-time troubleshooting.
- Integrated chatbot solutions with Samsung's customer service platforms via **Dialogflow** and **FastAPI** to provide smart home automation suggestions.
- Developed **React** and **Vue**-based front-end applications, enhancing UX for dashboards, chatbot interfaces, and logistics tracking systems.
- Created reusable React and Vue components, optimizing performance with **Redux**, **React Context**, and **Vuex** for state management.
- Optimized **SQLAlchemy ORM** and **PostgreSQL** indexing, improving query execution for monitoring and analytics tools.
- Implemented distributed caching with Redis, reducing redundant API calls and improving response times for device tracking and customer support.
- Designed event-driven workflows using **Kafka** and **RabbitMQ**, ensuring efficient asynchronous processing for firmware updates, system alerts, and chatbot interactions.
- Developed **RESTful** and **GraphQL** APIs for Samsung's supply chain and retail integration, streamlining data exchange across platforms.
- Maintained **Node.js** (Express, NestJS) services, handling API integrations, background job processing, and authentication.
- Built comprehensive test suites with **Jest**, **Cypress**, **PyTest**, and **Django Test Framework**, ensuring system stability.
- Led migration of monolithic services to containerized microservices, leveraging Docker and Kubernetes for scalability.
- Automated CI/CD pipelines using GitHub Actions, Jenkins, and Terraform, enabling continuous integration and zero-downtime deployments.

Citi

Full Stack Developer

Texas, USA

January 2018 - May 2020

- Developed high-performance trading applications using **Python** (Django for backend services), **Node.js**, and **React**, ensuring real-time data updates and system reliability.
- Built RESTful & GraphQL APIs using **Django** and **Flask**, with Flask handling lightweight services and Django managing core business logic for financial transactions.
- Designed and optimized frontend components using React and Vue, improving UX with dynamic, responsive UI and efficient state management.
- Implemented real-time messaging and event-driven systems using Kafka, WebSockets, and Django Channels, enabling instant trade execution updates.
- Optimized SQL (PostgreSQL, MySQL) and NoSQL (MongoDB, DynamoDB) databases, ensuring high-performance query execution and large-scale transaction handling.
- Secured API communication using OAuth2, JWT, and encryption standards, ensuring compliance with financial security regulations.
- Automated CI/CD pipelines using Jenkins, Docker, and Kubernetes, improving deployment efficiency and system scalability.
- Developed unit and integration test suites with PyTest, Django Test Framework, Jest, and Cypress, ensuring software reliability in a high-frequency trading environment.

SKILLS

Skills: Python, TypeScript, JavaScript, Django, Flask, FastAPI, Node.js, Express.js, SQLAlchemy, Django ORM, Prisma, React.js, Vue.js, MySQL, PostgreSQL, MongoDB, Redis, Cassandra, AWS S3, Azure Blob Storage, AWS (EC2, Lambda, S3, SageMaker), Microsoft Azure, Docker, Kubernetes, Terraform, Ansible, Jenkins, GitHub Actions, GitLab CI/CD, RESTful APIs, GraphQL, gRPC, OAuth2, JWT, API Gateway, Apache Kafka, RabbitMQ, Redis Pub/Sub, Tensorflow, Pytorch, OpenAI API, LangChain, PyTest, Jest, Cypress, Selenium, Unittest, JUnit, Playwright, Agile, SCRUM, JIRA
