

Greeshma Borra

Sr. Java Full Stack Developer

greeshmab08@gmail.com | +1 737-368-2527

PROFESSIONAL SUMMARY

- Senior Java Full Stack Developer with 10+ years of experience in designing, developing, and deploying high-performance, scalable enterprise applications using Java, Spring Boot, React, and Angular.
- Skilled in building microservices-based architectures leveraging Spring Boot, Spring MVC, and RESTful APIs, ensuring modularity, maintainability, and efficient system integration.
- Experienced in front-end development using React, Angular, Vue.js, TypeScript, and JavaScript (ES6+), delivering responsive, user-friendly, and accessible web applications.
- Hands-on expertise in database design and performance tuning with MySQL, PostgreSQL, Oracle, and SQL Server, including complex PL/SQL scripting and query optimization.
- Proficient in cloud-native development across AWS (Lambda, EC2, RDS, S3, CloudFormation) and Azure (App Services, DevOps, Functions, Logic Apps), with extensive exposure to serverless and containerized deployments using Docker and Kubernetes.
- Strong background in CI/CD automation with Jenkins, Maven, Gradle, GitHub Actions, and Azure DevOps, ensuring consistent builds, test coverage, and reliable deployments.
- Implemented event-driven systems using Apache Kafka, RabbitMQ, and JMS, improving message-driven scalability and inter-service communication.
- Solid experience with security frameworks, including Spring Security, JWT, and OAuth 2.0, enabling robust authentication and fine-grained role-based access control (RBAC).
- Applied TDD principles using JUnit, Mockito, and Jest, promoting clean code practices and improving defect detection during development cycles.
- Adept at using Agile methodologies (Scrum & Kanban), DevOps practices, and collaborative tools such as JIRA, Confluence, GitHub, and Bitbucket to ensure transparency and efficient team delivery.
- Recognized for strong problem-solving and analytical thinking, consistently identifying performance bottlenecks and optimizing system performance.
- Known for clear communication and cross-functional collaboration, effectively bridging gaps between engineering, QA, and product teams to achieve shared goals.

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL, PL/SQL, JSP, JSTL, Bash

Frameworks & Libraries: Spring Boot, Spring MVC, Spring AOP, Spring Security, Spring Batch, Spring Data JPA, Hibernate, JDBC, React, Angular, Vue.js, Redux, RxJS, Bootstrap, jQuery, AJAX

Architecture & Design Patterns: Microservices, Serverless, REST, GraphQL, SOAP, MVC, Design Patterns (Singleton, Factory, Observer), IoC, DI, AOP

Cloud Platforms: AWS (EC2, Lambda, RDS, S3, CloudFormation, CodeBuild, CodeDeploy, CloudWatch, CloudTrail, Route 53, IAM), Azure (Functions, App Services, DevOps, Logic Apps, CosmosDB, Data Factory)

Testing: JUnit, Mockito, Jest, TDD

Version Control & Collaboration: Git, GitHub, Bitbucket, SVN, JIRA, Confluence

Messaging & Integration: Apache Kafka, RabbitMQ, JMS

Databases & Storage: MySQL, PostgreSQL, SQL Server, Oracle

CI/CD & DevOps: Jenkins, GitHub Actions, Azure DevOps, Maven, Gradle, Terraform, Docker, Kubernetes, SonarQube

Methodologies: Agile (Scrum, Kanban), CI/CD, DevOps Practices

Security & Auth: JWT, OAuth 2.0, RBAC

EXPERIENCE

BCBS, Chicago, IL

Senior Java Full Stack Developer | December 2023 – Present

- Engineered and maintained modular enterprise applications using Spring Boot, Spring Core, and Spring AOP, focusing on performance, scalability, and reusable service design.
- Architected microservices-based solutions supporting independent scalability, fault isolation, and faster release cycles across distributed systems.
- Implemented GraphQL APIs to allow flexible, client-driven queries, reducing over-fetching and improving data response efficiency for front-end teams.

- Enhanced database performance by optimizing MySQL queries, stored procedures, and indexes, improving data retrieval speed and transactional reliability.
- Developed responsive web applications with React, JavaScript (ES6+), HTML5, and CSS3, ensuring a consistent user experience across browsers and mobile devices.
- Managed client-side routing and state management through Redux and React Router, enabling seamless navigation and predictable data flow within complex applications.
- Utilized Java Collections Framework and Generics to efficiently process large data sets, improving backend data handling and reducing processing overhead.
- Streamlined data persistence using Hibernate ORM, eliminating redundant SQL and improving consistency between Java entities and relational databases.
- Created reusable front-end components with Bootstrap, maintaining UI consistency and accelerating interface development.
- Deployed cloud-native applications on AWS (EC2, RDS, Lambda, S3) to ensure scalability, high availability, and fault tolerance in production environments.
- Increased frontend performance by integrating AJAX-based asynchronous requests, minimizing page reloads, and optimizing client responsiveness.
- Documented and maintained API specifications with Swagger, improving transparency, collaboration, and developer onboarding.
- Designed and executed Spring Batch jobs for high-volume data processing with integrated fault tolerance and retry logic, ensuring operational robustness.
- Built and secured RESTful web services using Spring Security, implementing role-based access control for reliable authentication and authorization.
- Improved system throughput by leveraging multithreading and concurrency mechanisms within Java, ensuring responsive and scalable backend services.
- Maintained and organized Git repositories to manage source control, version history, and cross-team code collaboration efficiently.
- Automated cloud infrastructure setup with AWS CloudFormation, incorporating Auto Scaling policies to adapt to varying workloads dynamically.
- Implemented application and infrastructure monitoring with AWS CloudWatch and CloudTrail, enabling real-time alerts and proactive issue management.
- Built and maintained CI/CD pipelines in Jenkins, automating build, test, and deployment stages for consistent and reliable software releases.
- Integrated AWS CodeBuild and CodeDeploy for environment-specific automated deployments, reducing manual intervention and deployment risks.
- Developed and executed comprehensive unit tests with JUnit to validate business logic and ensure robust, production-ready code.
- Collaborated closely with QA, DevOps, and UI/UX teams to deliver integrated, high-quality applications aligned with organizational and client goals.
- Contributed actively to Agile/Scrum ceremonies, including sprint planning, retrospectives, and daily stand-ups, ensuring iterative progress toward business objectives.
- Managed and tracked development tasks using JIRA, identifying blockers early and ensuring project deliverables met timelines and quality standards.

Environment: Java, Spring Boot, Spring Core, Spring AOP, Hibernate ORM, GraphQL, React, AJAX, MySQL, AWS EC2, RDS, Lambda, S3, AWS CloudFormation, CloudWatch, CloudTrail, Swagger, Jenkins, AWS CodeBuild, AWS CodeDeploy, JUnit, Git, Agile/Scrum, JIRA.

Grainger, Lake Forest, IL

Java Full Stack Developer | August 2022 – November 2023

- Designed and developed Spring Boot-based microservices to support distributed, decoupled architectures, improving service scalability, fault tolerance, and data integrity.
- Built and maintained RESTful APIs optimized for stateless communication, enabling seamless integration between front-end systems and external applications.
- Applied Spring Core IoC and Dependency Injection (DI) to build modular backend components, simplifying maintenance and promoting reusable service layers.
- Utilized Spring AOP for centralized logging, exception handling, and transaction management, ensuring consistency and reducing redundant code.
- Managed database transactions using Spring Transaction Management, JDBC, and Java, maintaining ACID compliance and data reliability across services.

- Built single-page applications (SPAs) using Angular and TypeScript, improving performance, responsiveness, and load times for client-facing modules.
- Deployed microservices and backend components on AWS EC2, RDS, and S3, utilizing Auto Scaling to achieve high availability under varying workloads.
- Developed serverless functions using AWS Lambda to process background tasks and event-driven operations, optimizing cost and resource utilization.
- Developed responsive, cross-browser UIs using HTML5, CSS3, and JavaScript, delivering consistent performance and accessibility across multiple devices.
- Enhanced user interactivity by implementing AJAX-based asynchronous requests, minimizing full-page reloads, and improving overall user experience.
- Implemented unit testing for both backend and frontend layers using JUnit and Jest, increasing test coverage and ensuring production-grade software quality.
- Integrated Apache Kafka to handle high-throughput, real-time data streaming and asynchronous messaging between distributed microservices.
- Leveraged RxJS in Angular to manage asynchronous data streams, enhancing UI reactivity and ensuring smoother front-end interactions.
- Adhered to SOLID principles and clean coding practices while conducting peer code reviews to maintain code readability, scalability, and performance.
- Partnered with DevOps teams to containerize services using Docker and orchestrate deployments via Kubernetes, ensuring consistent environments and efficient rollouts.
- Configured CI/CD pipelines using Jenkins and Gradle, automating build, test, and deployment processes for reliable and repeatable releases.
- Integrated SonarQube within CI pipelines to perform static code analysis, ensuring adherence to coding standards and maintaining software quality.
- Collaborated closely with cross-functional teams—including QA engineers, product owners, and UI/UX designers—to deliver high-performing, user-centered solutions.
- Optimized backend and database performance by profiling Spring services, tuning queries, and resolving performance bottlenecks.
- Maintained technical documentation for architecture, APIs, workflows, and deployment procedures to support knowledge transfer and onboarding.
- Monitored and supported production systems to ensure application stability, uptime, and adherence to defined SLAs.
- Provisioned and managed cloud infrastructure with Terraform, enabling version-controlled and reproducible environment setups.
- Implemented centralized logging and monitoring using the ELK Stack (Elasticsearch, Logstash, Kibana) to support proactive troubleshooting and system observability.
- Secured application endpoints with OAuth 2.0, enforcing authentication and authorization standards for sensitive API communications.
- Actively participated in Agile ceremonies such as sprint planning, retrospectives, and daily stand-ups, supporting iterative development and timely delivery.

Environment: Java, Spring Boot, Spring Core, Spring IoC, DI, Spring AOP, Spring Transaction Management, JDBC, RESTful APIs, AJAX, JUnit, Jest, Apache Kafka, RxJS, AWS EC2, RDS, S3, Lambda, Docker, Kubernetes, Jenkins, Gradle, SonarQube, Terraform, ELK Stack, OAuth 2.0, Agile.

Tvisha Technologies, India

J2EE Developer | January 2019 – May 2022

- Designed and deployed distributed microservices using Spring Boot, supporting large-scale transactional operations and cloud-based, high-performance applications.
- Created dynamic web pages using JSP, Servlets, and JSTL, delivering interactive, server-rendered content for improved user engagement.
- Partnered with frontend teams leveraging Vue.js, JavaScript, HTML5, and CSS3 to create seamless, responsive UI components integrated with backend APIs.
- Used AJAX to perform asynchronous data retrieval and partial page updates, increasing responsiveness and minimizing full-page reloads.
- Deployed containerized Java applications on Azure App Services with auto-scaling configurations, ensuring uptime and elasticity under fluctuating workloads.
- Built serverless event-driven workflows with Azure Functions, reducing infrastructure overhead and improving process automation.

- Developed and integrated RESTful APIs to enable structured, secure, and efficient communication between front-end and back-end systems.
- Applied Spring IoC and Dependency Injection (DI) principles to build loosely coupled services, improving modularity, scalability, and maintainability.
- Managed SQL Server and NoSQL databases with Spring Data JPA, optimizing data access and minimizing the need for manual SQL scripts.
- Implemented cross-cutting functionalities with Spring AOP, providing consistent handling of logging, transaction management, and application security.
- Utilized Java 8 features—including lambda expressions and the Stream API—to simplify data operations and improve code efficiency and readability.
- Automated enterprise workflows through Azure Logic Apps, streamlining integrations between systems and eliminating repetitive manual processes.
- Implemented asynchronous communication using JMS (Java Message Service) to decouple services and improve fault tolerance and scalability.
- Worked collaboratively with cross-functional teams to troubleshoot production issues, optimize performance, and deliver solutions aligned with business goals.
- Automated deployment pipelines using Azure DevOps, enabling continuous integration and delivery (CI/CD) across development, staging, and production environments.
- Wrote and executed unit and integration tests with JUnit, validating functionality early in the development cycle and maintaining production stability.
- Participated in Kanban-based Agile sprints, contributing to backlog refinement, iterative delivery, and continuous improvement initiatives.
- Maintained technical documentation in JIRA and Confluence, ensuring visibility into architecture, processes, and design decisions for all stakeholders.
- Secured REST APIs using JWT authentication and role-based authorization, ensuring compliance with enterprise security and access standards.
- Used Git and GitHub for version control, supporting distributed team collaboration, code reviews, and effective branching strategies.

Environment: Java, Spring Boot, JSP, Servlets, JSTL, Vue.js, JavaScript, HTML5, CSS3, AJAX, RESTful APIs, JMS, SQL Server, Spring Data JPA, Azure, Azure DevOps, JUnit, Kanban, JWT, Git, GitHub, JIRA, Confluence.

Prismetric Technologies, India

Java Software Engineer | July 2015 – December 2018

- Designed and developed scalable enterprise applications using Spring Boot and MVC architecture, supporting modular microservice-based functionality.
- Applied Inversion of Control (IoC) and Dependency Injection (DI) patterns to achieve modular, maintainable, and testable backend code.
- Utilized Hibernate ORM for reliable data persistence, reducing manual SQL scripting while improving database performance and transaction management.
- Developed server-side logic with Servlets and JSP, generating dynamic content for interactive, data-driven web applications.
- Built and integrated RESTful APIs through Spring Boot, enabling efficient, secure, and seamless communication between distributed systems and user interfaces.
- Integrated backend logic with AWS compute and storage services such as EC2, S3, and RDS, optimizing performance, scalability, and system reliability.
- Deployed cloud-native Java applications on AWS Elastic Beanstalk, leveraging Amazon EC2, S3, and Lambda for high availability, elasticity, and cost optimization.
- Automated build and deployment pipelines using GitHub Actions and AWS CodeDeploy, streamlining CI/CD workflows and ensuring consistent delivery across multiple environments.
- Integrated RabbitMQ to enable asynchronous messaging, supporting decoupled microservice communication and improving system responsiveness.
- Deployed enterprise applications on JBoss servers, managing full application lifecycle stages from development through production.
- Designed and consumed SOAP web services with WSDL endpoints, ensuring standardized and reliable integrations with partner and legacy systems.
- Engineered reusable service components using object-oriented programming principles, ensuring consistent logic implementation across business layers.

- Created responsive front-end interfaces using HTML, CSS, JavaScript, and jQuery, improving usability and visual performance across browsers.
- Employed AJAX for asynchronous data loading, reducing page reloads and enhancing user experience.
- Managed Maven builds and dependencies, maintaining consistent configuration and deployment processes across environments.
- Configured AWS Identity and Access Management (IAM) to define and enforce secure, role-based access controls across services and deployment environments.
- Participated in Agile development cycles, contributing to sprint planning, backlog refinement, and iterative delivery.
- Practiced Test-Driven Development (TDD) using Mockito, creating comprehensive unit tests and mocks to validate backend functionality.

Environment: Java, Spring Boot, MVC, IoC, DI, Hibernate ORM, Servlets, JSP, RESTful APIs, SOAP Web Services, AWS, GitHub Actions, AWS CodeDeploy, RabbitMQ, JBoss, jQuery, AJAX, Maven, AWS IAM, Agile, TDD, Mockito.
