SUMMARY

Experienced Systems Analyst with a strong background in managing medium to large-scale projects, focusing on gathering requirements, conducting regression analysis, and streamlining processes. Passionate about improving workflows and bridging the gap between business needs and technical solutions. Skilled in Agile methodologies, SDLC documentation, and stakeholder communication, ensuring smooth collaboration across teams and with the executive team. Proficient in tools like ServiceNow, JIRA, Tableau, Power BI, Excel, and Informatica to drive data-driven decision-making and enhance financial reporting. Enjoy mentoring junior analysts and finding smarter ways to optimize business strategies for greater effectiveness and profitability.

EXPERIENCE

Systems Analyst, Florida Department of Corrections, Tallahassee, United States

Jan 2024 - Present

- Collaborated closely with project managers, stakeholders, and the executive team on CIMS and TRP projects to gather business requirements and ensure the technical solutions aligned perfectly with business goals and effectiveness.
- Participated in stakeholder meetings to gather requirements and ensure project deliverables met business objectives and provided suggestions for improvement.
- Created detailed technical reports using confluence, process modeling, wireframes, and mockups to communicate system designs and process improvements.
- Designed process models and workflow diagrams in Microsoft Visio to illustrate current and future state operations, streamlining system enhancements.
- Created interactive dashboards and reports using Power BI and Tableau to track key performance metrics and improve decision-making.
- Kept systems running smoothly by proactively monitoring Azure service health and server performance, identifying and fixing potential issues before they could impact operations.
- Ensured data accuracy and compliance by conducting thorough system audits and validation testing for data integrations, helping maintain industry standards.
- Developed and led QA strategies for Azure-based solutions, managing both test case automation and execution to improve software quality and reliability.
- Analyzed gaps in existing processes, uncovering inefficiencies and recommending smarter resource allocation strategies to enhance productivity and compliance.
- Developed and maintained technical documentation in Confluence, including system architecture diagrams, configuration details, and operational workflows to support system design and deployment.
- Configured and maintained DHCP settings to ensure smooth network performance and seamless device connectivity.
- Oversaw project demands, change requests, and incident tickets in ServiceNow, working closely with teams to troubleshoot issues and keep projects on track.
- Improved user access management by replacing outdated logon scripts with Group Policy Objects (GPOs), reducing manual work and strengthening security.
- Maintained O365 licenses for departmental users, ensuring license compliance and optimizing costs.
- Migrated on-premise servers to Azure, reducing infrastructure costs and improving scalability by 30%.
- Created and managed FTP connections, virtual machines, storage accounts, and Azure backups, ensuring high availability and data security.
- Managed Azure Active Directory, handling user access and permissions to keep systems secure and ensure compliance with the organization's security policies.
- Collaborated on disaster recovery plans, making sure the business stayed up and running by setting up proactive backup and failover strategies.

IT Analyst, Aramark, Tallahassee, United States

Jan 2022 - Dec 2023

- Revolutionized retail and ecommerce operations across FSU's dining locations by implementing a Menu Recipe Database that streamlined buying processes and reduced transaction times by 15%.
- Empowered a team of five junior staff members by providing hands-on training and mentorship, boosting their technical and quantitative skills by 20%.
- Made troubleshooting faster and easier by documenting critical inventory management system data for POS machines, significantly improving remote issue resolution and technical reporting.
- Led a seamless migration to a new inventory management platform, improving supply tracking accuracy and ensuring smoother restaurant operations.
- Developed interactive dashboards in Power BI and Tableau, providing real-time visibility into inventory levels, sales trends, and procurement data, enabling leadership to make faster, data-driven decisions.
- Created detailed process flows and system mockups to illustrate menu management workflows and system integrations, aligning technical teams and business stakeholders on system enhancements.

- Facilitated workshops, interviews and surveys with restaurant managers and end-users to gather requirements, identify pain points, and design scalable solutions for inventory and ordering systems.
- Transformed raw data into meaningful insights by writing custom SQL queries, creating reports on stock levels, sales trends, and procurement strategies—helping leadership make informed, data-driven decisions.
- Identified inefficiencies in procurement processes, leading to cost-saving strategies that cut expenses by 8% and saved the company \$150,000 annually.
- Enhanced customer experience by integrating restaurant menus and pricing into mobile ordering platforms, allowing students and staff to place self-service orders effortlessly.
- Kept projects on track and teams aligned by using JIRA and Confluence to monitor progress, collaborate with stakeholders, and ensure smooth execution following Agile best practices.

Business Analyst, Stars Group, Hyderabad, India **Dec 2020 - Dec 2021**

- Collaborated with fraud prevention, compliance, IT, and data science teams to gather requirements, map AS-IS workflows, and design TO-BE models that meet AML, KYC, and responsible gaming standards using process modeling techniques.
- Analyzed large datasets using SQL and Tableau to develop risk scoring models, flag suspicious activities, and create Power BI dashboards for real-time monitoring and effectiveness.
- Managed QA initiatives for trading platform enhancements, ensuring robust system performance and compliance with Enterprise Architecture standards.
- Created detailed process flow diagrams in Microsoft Visio to visualize system changes and ensure clear communication across teams.
- Integrated third-party fraud detection APIs and designed specifications to automate data synchronization between gaming, payment, and compliance systems.
- Developed and executed UAT test cases to validate new fraud detection rules, reduce false positives, and ensure system performance.
- Maintained comprehensive documentation including BRD, FRD, and SOPs to ensure clear project guidelines and regulatory compliance.
- Led Agile sprint planning and daily stand-ups to coordinate cross-functional teams for iterative delivery and continuous improvement.

Business Analyst, Amazon, Hyderabad, India **Sep 2020 - Dec 2020**

- Optimized vendor performance tracking by analyzing current states workflows and designing future states models to enhance business strategies and profitability.
- Collaborated with cross-functional teams to validate data pipelines using Informatica IICS Cloud Data Integration tools, ensuring accurate and efficient data processing for financial reporting.
- Used SQL, Tableau, and Excel to perform regression analysis and dive deep into vendor performance, uncovering trends and areas for improvement to enhance business operations.
- Integrated RESTful APIs to automate vendor data synchronization, eliminating manual work and improving data accuracy across systems.
- Designed and executed UAT test cases to ensure analytics enhancements worked as expected, while also keeping BRDs updated in GitLab for seamless project tracking Led Agile sprint planning to align supply chain, procurement, and IT teams for seamless execution.

Automation Test Engineer, People Tech Group, Hyderabad, India **Jul 2020 - Sep 2020**

- Ran automated tests to check the performance of image recognition models, helping improve their accuracy by 18% through data analysis.
- Wrote testing scripts using Selenium and Python, cutting down manual testing time by 40% and enhancing reporting efficiency.
- Designed and implemented test automation frameworks for enterprise applications, reducing manual testing efforts and increasing efficiency in finance and accounting processes.
- Documented test plans and defect reports, making it easier to track issues and speed up their resolution.

EDUCATION

Florida state university, Tallahassee, United States - *Masters in computer science, Masters - GPA: 4.0*
Jawaharlal Nehru Technological university, India - *Bachelors in Computer science, Bachelor of Science - GPA: 4.0*

CERTIFICATIONS

Professional Scrum Master (PSM), Scrum.org	Feb 2025
IIBA Entry Certificate in Business Analysis (ECBA), IIBA	Jan 2025
PL-300: Microsoft Power BI Data Analyst, Microsoft	Jan 2025
