

Hudson Ali

Senior Full Stack Developer
hudson.tech4u@gmail.com

Dallas, TX
(312) 766 6696

Experience Summary

- Experienced Full Stack Developer with **7 years** of expertise in optimizing and deploying high-performance applications across healthcare, financial, and e-commerce sectors.
- Demonstrated success in enhancing application performance by up to 50%, streamlining development processes to achieve a 25% time reduction, and strengthening system security by 20%.
- A cooperative team member with proficiency in microservices, optimization of RESTful APIs, and the implementation of data protection protocols.

Tools & Technologies

Languages/Tools: Node.js, React.js, JavaScript, TypeScript, Express.js, KOA, Nest.js, Socket.io, RESTful, Microservices architecture, Github, Gitlab, Bitbucket, Redis, Unit Testing, Mocha Jest, Jenfiins, Kubernetes, Docker, RabbitMQ, Kaffka, TDD, Google Cloud, AWS, MongoDB, MySQL, GraphQL, PostgreSQL, DynamoDB

Work Experience

Staff Software Engineer

Finstreet (2020 - Present)

- Spearheaded a key project at Finstreet, a leading fintech company with a mission to automate financial operations across Europe, focusing on the automation of banking processes.
- Seamlessly worked on both frontend and backend aspects, enhancing the bank advisors and bank admin applications.
- Integrated third-party APIs to augment functionality and streamline operations.
- **Streamlined front-end asset management** and improved deployment efficiency by utilizing **Webpack** for bundling assets and managing dependencies across multiple projects.
- Successfully led a 24-member developer team, ensuring code quality, performance and optimization through code reviews and the implementation of robust security checks.
- In addition to fintech, expanded expertise by actively engaging with NFT and Meta verse applications within 10Pearls, gaining valuable insights into these emerging technologies.

Technologies: Node.js, Next.js, Webpack, Vite, Snowpack, React.js, Redux, Chakra, AWS, GCP, Git, JIRA, Atlassian, Security, CI/CD, and Product Management.

Senior Software Engineer and Technical Lead

Everyday Health (2018 - 2020)

- Spearheaded a 10-month overhaul of the Everyday health application, optimizing performance and functionality.
- Established and trained a skilled team for comprehensive project support.
- Designed microservices architecture for Node.js and React applications.
- **Implemented and configured Snowpack** for rapid development, leveraging its module federation capabilities to enhance the development workflow and reduce build times significantly.
- Implemented continuous delivery using declarative infrastructure and automated deployment.
- Successfully integrated HIPAA compliance measures into the application, ensuring data security and privacy adherence.
- Contributed significantly to feature development across both backend and frontend.
- Collaborated directly with clients for effective requirement gathering and project leadership.

Technologies: Node.js, React, Webpack, Vite, Snowpack, Docker, Lambda, Git, GitHub Actions, Confluence, JIRA, Firebase, AWS, MySQL, PostgreSQL, MongoDB, CI/CD, Security, microservices, Team training.

Software Engineer

Gaper (2017 - 2018)

- Spearheaded the development of the SMA Fintech application (a project through **GAPER**), dedicated to accurately forecasting stock and Bitcoin market movements, visually presenting results in chart format post-analysis.
- Played a key role in implementing high charts, alerts, and notifications functionalities, enhancing the user experience and decision-making capabilities of the application.
- Gained valuable insights into crypto currency, and Bitcoin, by actively participating in this project, further enriching expertise in the fintech domain.
- **Optimized build processes** using **Webpack** and **Vite**, resulting in faster application load times and improved performance through effective code splitting and tree shaking.
- Collaborated on optimizing doctor appointments and patient records for better healthcare services.
- Contributed to a project with a significant impact on the US healthcare market, demonstrating a dedication to driving positive change and innovation in the industry.

Technologies: CoffeeScript, Backbone.js, Meta loop, High Charts, Webpack, Vite, Elasticsearch, MongoDB, MySQL, Angular, Bitbucket, GitLab.

Software Developer

Webify (2016 - 2017)

- Roitrack is a comprehensive application designed to streamline operational management for US car dealers.
- Focused on key aspects such as car insurance, booking, and appointment functionalities, enhancing the application's utility for car dealers and supporting their day-to-day operations.

Technologies: jQuery, NodeJS, Angular, MongoDB, MySQL, GitLab.

Projects

Giggle Finance

Successfully designed and implemented a return plan that included the retrieval of user banking history, resulting in significant cost savings amounting to \$35,000 for the client.

Technologies: Node.js, React.js, NPM packages, Alloy integration, JWT, Digital Ocean, MySQL, JavaScript, Git.

Xcademy

<https://www.xcademy.com/>

Focused on enhancing the instructor module within the application, which played a pivotal role in training individuals and closely monitoring their progress. This feature significantly contributes to the application's effectiveness and user success.

Technologies: Node.js, Node BB, React.js, Next.js, Kafka, NPM packages, web services, Heroku, Circle CI, MySQL, Bitbucket.

Ezgigi

<https://ezgigi.com/>

Revamped the doctor clinics and patient appointments system, effectively managing and preserving their medical history within the application. This optimization facilitated the onboarding of an impressive 80 additional clinics for the client in just one month.

Technologies: Node.js, React.js, Redux Saga, GraphQL, gRPC, AWS, MongoDB, GitHub.

Cricks Lab

<https://crickslab.com/>

Enhanced the live commentary and real-time match fixtures generation capabilities, while also contributing to the development of a club management system. This combined effort enabled the client to seamlessly onboard thousands of cricket clubs, marking a significant leap in their operations.

Technologies: Laravel, Node.js, AWS Lambda, Docker, Angular, AWS, MySQL, GitHub.

EVVA Finanzas

<https://evvafinanzas.com/en/>

Developed a module to receive payments, resulting in a \$40,000 revenue increase in 20 days and expanding the client base.

Technologies: Node.js, React.js, Redux, Firebase, MySQL, Bitbucket.

Education

Harvard University

Master's Business Management
