

Ishiah (Kyler) Scott

Senior Java Fullstack developer

✉ ishiahS4325@hotmail.com  [linkedin.com/in/ishiah-scott-6a8734353](https://www.linkedin.com/in/ishiah-scott-6a8734353)  Decatur, GA, US

Profile

I am a Senior Java Full Stack Developer with over 10 years of industry experience, specializing in designing, developing, and deploying scalable, high-performance applications across diverse industries. My expertise spans Java/J2EE, Spring Boot, Angular, React, and cloud-native architectures leveraging AWS, Kubernetes, and Docker.

With a strong foundation in microservices, distributed systems, and DevOps best practices, I have successfully built and optimized mission-critical applications, ensuring reliability, security, and seamless user experiences.

My experience includes:

- ✓ Backend Mastery: Deep expertise in Java, Spring Boot, RESTful APIs, GraphQL, and event-driven architectures.
- ✓ Frontend Development: Proficient in Angular, React, and Vue.js, delivering dynamic, user-friendly interfaces.
- ✓ Cloud & DevOps: Strong command of AWS (Lambda, ECS, S3, API Gateway), Kubernetes, CI/CD pipelines, Terraform, and Docker.
- ✓ Scalable Systems: Architecting high-availability, fault-tolerant enterprise solutions in finance, healthcare, and e-commerce.

Beyond coding, I am passionate about mentorship, innovation, and continuous learning. I have led engineering teams, conducted technical training sessions, and contributed to open-source projects and tech communities. My problem-solving mindset, combined with a deep understanding of algorithms, machine learning, and cloud infrastructure, enables me to tackle complex challenges and drive technological advancements.

I am always eager to explore cutting-edge technologies, optimize system performance, and collaborate with like-minded professionals to build transformative software solutions. Let's connect and push the boundaries of software engineering together

Professional Experience

Mobomo

04/2022 – 02/2025 | Gaithersburg, MD, US

Senior Java Full stack developer

- Designed and implemented RESTful APIs using Java 17, Spring Boot, Swagger, and Hibernate, improving system modularity and maintainability.
- Developed FHIR APIs for standardized access to patient records and clinical data, ensuring seamless healthcare data interoperability.
- Integrated SOAP web services utilizing Apache CXF, PL/SQL, and XML for large-scale enterprise solutions.
- Built scalable microservices with Spring Cloud, Netflix Eureka, Feign Client, and Ribbon, enabling high-availability distributed systems.
- Implemented containerized microservices using Docker, Kubernetes, and AWS Lambda, ensuring smooth CI/CD pipelines with Jenkins, Gradle, and Git.

- Migrated legacy monolithic applications to AWS cloud infrastructure, optimizing storage with S3 buckets and enhancing security via IAM roles.
- Developed responsive and interactive UIs using Angular 16, ReactJS, JavaScript (ES6+), and TypeScript, ensuring seamless user experiences.
- Designed UI components using Spring MVC, Node.js, AJAX, and JSON, improving application interactivity and performance.
- Implemented drag-and-drop features, real-time validation, and dynamic client-side components using jQuery plugins and Angular directives.
- Utilized Java 17's CompletableFuture API to implement concurrent programming techniques, significantly enhancing application responsiveness and system resource utilization.
- Designed and maintained CI/CD pipelines using Jenkins, CloudBees, and Gradle, automating build, test, and deployment processes.
- Performed performance testing using Scala and Gatling, ensuring API efficiency and reducing latency across services.
- Led the migration of Oracle databases to DB2 and MongoDB, optimizing queries and indexing strategies for improved scalability and reliability.
- Implemented OAuth2, JWT authentication, and role-based access control for secure application development.
- Created CloudWatch alarms and notifications for proactive monitoring of AWS EC2 instances and application health metrics.
- Delivered high-quality software through Test-Driven Development (TDD) and Behavior-Driven Development (BDD) using JUnit, Mockito, PowerMock, and Cucumber.
- Collaborated within Agile Scrum teams, actively participating in code reviews, sprint planning, and continuous integration efforts.

Wrainbo

12/2019 – 07/2022 | Atlanta, GA, US

Senior Java Developer

- Developed identity, authentication, and federation applications using cloud technologies to enhance security and scalability.
- Led the migration of on-premise applications to cloud platforms (AWS, GCP, Azure) using Spring Boot, Docker, and Kubernetes, ensuring seamless scalability and reduced operational costs.
- Designed and implemented event-driven microservices using Kafka, RabbitMQ, and Apache Pulsar, improving system responsiveness and resilience.
- Architected and implemented RESTful APIs using Java 17, Spring Boot, Swagger, and Hibernate, enabling seamless integration across enterprise applications.
- Rewrote legacy credit solutions from SAP ERP to Java 11 microservices, leading to a 500% increase in performance and improved system reliability.
- Developed a highly available, serverless computing service similar to AWS Lambda, allowing developers to deploy business logic seamlessly without managing infrastructure.
- Integrated Java-based microservices into existing legacy systems using SOAP, PL/SQL, and Apache Axis, improving interoperability and extending system capabilities.
- Designed an extensive continuous delivery pipeline using Jenkins, CloudBees, Gradle, Git, and Docker, streamlining build, test, and deployment workflows.
- Migrated microservices from virtual machines to OpenShift clusters, enhancing reliability and improving application availability and scalability.
- Integrated ELK Stack (Elasticsearch, Logstash, Kibana) and Prometheus/Grafana for real-time logging, monitoring, and alerting, improving system observability.

- Automated software build, test, and release processes using Maven, GitHub Actions, SonarQube, and Nexus, significantly reducing deployment times.
- Conducted extensive performance testing using Scala and Gatling, ensuring API efficiency and minimizing system bottlenecks.
- Implemented multi-threaded and concurrent processing techniques using Java's `CompletableFuture` API, optimizing resource utilization and reducing latency.
- Developed batch processing applications with Spring, JPA, Hibernate, and Oracle, enabling accurate and efficient data processing.
- Enforced strict code quality standards using Jacoco, FindBugs, PMD, Checkstyle, and unit testing frameworks like JUnit, Mockito, and PowerMock.
- Designed and built a mission-critical financial services platform supporting over 100M+ clients in Western Europe's largest bank, ensuring high availability and security.
- Developed Sber Platform V Functions, a cloud-based computing service enabling developers to deploy code seamlessly on Kubernetes, significantly accelerating development lifecycles.
- Integrated modern authentication and security protocols, including OAuth2, JWT, and SAML, to enhance access control and data protection.
- Worked in Agile Scrum teams, collaborating with cross-functional engineers, architects, and business stakeholders to drive product innovation.
- Led code reviews, architectural discussions, and mentorship programs, fostering a culture of continuous learning and technical excellence.
- Contributed to open-source projects and technical communities, sharing knowledge on microservices, DevOps, and cloud technologies.

SD Solutions, LLC

02/2015 – 11/2019 | Vienna, VA, US

Junior Fullstack developer

- Developed responsive web applications using React.js, TypeScript, JavaScript (ES6+), HTML5, and CSS3, ensuring a seamless user experience across devices.
- Designed and built reusable, modular React.js components, improving development efficiency and code maintainability.
- Integrated third-party APIs and libraries into React.js applications, enhancing functionality and user engagement.
- Used AJAX and Fetch API to handle asynchronous data fetching and ensure smooth client-server interactions.
- Created dynamic, user-friendly interfaces with Bootstrap, Tailwind CSS, and Material-UI, improving web application aesthetics and usability.
- Developed RESTful APIs using Java, Spring Boot, and Hibernate, enabling seamless data exchange between frontend and backend services.
- Implemented Spring MVC architecture, ensuring maintainability and scalability of backend services.
- Designed and optimized database schemas using PostgreSQL and MySQL, ensuring efficient data storage and retrieval.
- Used Spring Data JPA to handle ORM and database transactions, reducing manual SQL queries.
- Developed server-side business logic using Servlets, JSP, and JavaBeans, ensuring smooth backend processing.
- Created SOAP-based web services using JAX-WS and tested them using SOAP UI for secure communication with external systems.
- Implemented microservices-based architecture using Spring Cloud and integrated services with Netflix Eureka and Feign Client for seamless communication.

- Designed and executed a CI/CD pipeline using Git, Jenkins, and Docker, enabling smooth and automated deployments.
- Deployed applications on AWS EC2 instances and managed storage with S3 buckets, ensuring high availability and reliability.
- Monitored application health and logs using ELK Stack (Elasticsearch, Logstash, Kibana) and Prometheus/Grafana for performance optimization.
- Developed and executed unit tests using JUnit and Mockito, ensuring high-quality, bug-free code.
- Performed API testing using Postman, validating request and response payloads for expected behavior.
- Used Jacoco, FindBugs, PMD, and Checkstyle for static code analysis and adherence to best coding practices.
- Optimized SQL queries and indexing strategies to enhance database performance and reduce query execution times.
- Participated in daily Scrum meetings, sprint planning, and retrospectives, ensuring timely delivery of project milestones.
- Collaborated with cross-functional teams, including designers, product managers, and DevOps engineers, to refine technical requirements and optimize workflows.
- Engaged in peer code reviews and knowledge-sharing sessions, continuously improving development processes and best practices.

Skills

Programming Languages

Java(v8-17), JavaScript/TypeScript, Python, Scala

Frontend Technologies

React.js, Angular, Vue.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Material-UI, AJAX, JSON, jQuery, WebSockets

Backend Technologies

Java Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Servlets, JSP, RESTful APIs, GraphQL, SOAP Web Services, Microservices Architecture, Event-Driven Architecture (Kafka, RabbitMQ, Pulsar)

Databases & Storage

PostgreSQL, MySQL, Oracle, DB2, MongoDB, Redis, PL/SQL, Query Optimization, Indexing, Database Migrations, Sequalize, Prisma

Cloud & DevOps

AWS (Lambda, ECS, S3, API Gateway, CloudWatch, IAM), Kubernetes, Docker, Jenkins, GitHub Actions, CloudBees, GitLab CI

Performance Optimization

Gatling, JMeter, CompletableFuture API, ExecutorService

Other Tools & Technologies

Apache Kafka, Apache Pulsar, RabbitMQ, Feign Client, Netflix Eureka, Ribbon, Scala, Gradle, Maven, Nexus

Version Control & Collaboration

Git, GitHub, GitLab, Bitbucket, Agile/Scrum Methodologies, Jira, Confluence

Education

University of West Georgia

Bachelor's Degree

04/2010 – 10/2014 | Carrollton, GA, US
