

Israel Afangideh

Full-stack engineer with 8+ years building fast, AI-driven, production-ready systems
israelafangideh@gmail.com | linkedin.com/in/israelafangideh | github.com/israelafangideh

Skills

Languages: Java, Javascript, Typescript, SQL, Python, C

Frameworks: Vuejs, Nodejs, React, Angular, Spring Boot, Svelte, SvelteKit

Experience

Founding Senior Software Engineer, Matium – Arlington, VA March 2023 – Present

- Designed and implemented an AI/ML powered material matching algorithm which increased invested capital by 60%.
- Built a multi-tenant materials marketplace complete with offers, requests and auctions leading to the third largest oil company using our platform to auction its plastic.
- Built stripe integration, enabling us to charge users, moving us from pre revenue to almost profitable.
- Added emissions calculation to our matching algorithm, reducing carbon emissions among our companies by 50%

Full Stack Engineer, Cognizant Technology Solutions – Plano, TX June 2022 – February 2023

- Developed the environmental registry to enable Cognizant clients track and report scope 3 carbon emissions increasing engagement among our current clients by about 20%
- Led several business development meetings, answering technical questions, and advising corporate clients in their decision-making regarding our environmental registry product
- Designed an internal educational application with Spring Microservices, and Angular, enabling associates to improve technical skills in preparation for client placements leading to 20% more client placements than the previous year

Full Stack Engineer, Thompson Technology – Montgomery, AL January 2020 – May 2022

- Created a web accessibility application to store and preserve endangered languages not supported by major platforms (e.g., Navajo, Ibibio, Efik), using Java/Spring and Angular
- Developed and deployed a variety of paid projects utilizing Java/Spring, Angular, or React.js, with hosting on AWS, GCP, or Nodehost.ca/Wordpress for self-hosted CMS solutions.
- Engineered a food delivery tracking application, prioritizing requests from top-tipping customers, to optimize drivers' earnings, using Java/Spring, Spring Microservices, and Angular

Full Stack Engineer, The Montgomery Insider – Montgomery, AL December 2016 – January 2020

- Built an automated journalist system that automatically turned press releases that we were emailed into news articles that went on our website and on our social media channels cutting wage related expenses in half
- Built software that allowed us to design our first magazine which brought the first revenue into the company
- Built and deployed our original news website from scratch using php and mysql, this was the first youth owned newspaper in the city of Montgomery

Projects

Matium

[Matium.com](https://matium.com)

- Built an application that allows suppliers to trade materials with each other, currently focused on the plastics market, and also enables firms to eliminate administrative toil and automate post sale document generation

Environmental Registry

- Built an application enabling companies to track their carbon emissions as well as those of their suppliers down to the raw material level of the supply chain

Ifiok

- Built an application to store and preserve endangered languages (eg: Navajo, Ibibio, Efik)

Education

Faulkner University – Master of Business Administration

May 2020
