

JAMUNA ADHIKARI

jamunaadhihari7866@gmail.com | 469-844-7468

www.linkedin.com/in/jamuna66/

Full Stack Software Engineer with 7+ years of experience in designing, developing, and testing enterprise-level web applications using Java, React, Angular, and Spring Boot. Extensive experience in AWS cloud services, microservices architecture, and front-end frameworks, leveraging Docker and Kubernetes for scalable deployments.

Key Highlights:

- Proficient in Java 8,11,17 with expertise in Collections, Multi-Threading, Exception Handling, and OOP.
- Built scalable backend services with Spring Boot, MVC, Security, RESTful APIs, and Microservices.
- Developed enterprise applications with Hibernate ORM and JPA for efficient database operations.
- Hands-on UI experience with Angular.js 10,14,16, React, JavaScript for dynamic web interfaces.
- Solid understanding of AWS (EC2, S3, RDS, VPC, Lambda, Redshift, DynamoDB, SNS, SQS) solutions.
- Architected microservices using Spring Boot, Docker, and Kubernetes for containerization and orchestration.
- Implemented real-time data streaming and event-driven architecture using Apache Kafka.
- Ensured application security using OAuth 2.0, JWT, and Role-Based Access Control (RBAC).
- Automated CI/CD pipelines using Kubernetes, Jenkins, and GitLab CI/CD.
- Proficient in SQL and NoSQL db (Oracle, MySQL, MongoDB, PostgreSQL) for complex data queries.
- Conducted unit testing with JUnit and Mockito, practicing Test-Driven Development (TDD).
- Agile (Scrum and XP) practitioner with active participation in sprint planning and retrospectives.
- Managed deployment using JBOSS, WebLogic, WebSphere, and Apache Tomcat.
- Used Git for version control, Jenkins for CI/CD, and Log4j, Grafana, and Prometheus for monitoring.

Technical Skills:

- **Programming Languages:** Java 8/9/11/17, J2EE, HTML, JDBC, Web Services, HTML5, CSS, XML, PL/SQL.
- **Frameworks:** Spring Core, Spring MVC, Apache, Apache Camel, Spring Boot, React, Angular JS & Angular 12/14/16.
- **Web Services:** Jax-WS, Jax-RS, Restful, SOAP, Microservices, AWS
- **ORM Frameworks:** Hibernate and Spring.
- **Application/Web Servers:** JBoss, Oracle BEA, Web Logic, IBM Web Sphere, Apache Tomcat.
- **Databases:** MySQL, Oracle SQL, Sybase, Microsoft SQL Server, Kafka, PostgreSQL, MongoDB.
- **Development Tools:** Eclipse Kepler, Oracle SUN Net Beans 7.x, TOAD, Oracle SQL Developer, WinSCP, SFTP, XML Spy, SOAP UI, MySQL.
- **Containerization & Orchestration:** Docker, Kubernetes.
- **Security:** OAuth 2.0, Spring Security, JWT.

Education:

Bachelor of Science in Information Systems
The University of Texas at Arlington, Arlington TX

Professional Experience

Full Stack Software Engineer
Progressive Insurance, Mayfield Village, OH

June 2021 – Present

- Developed and sustained enterprise-level database applications using Hibernate ORM and Java Persistence API (JPA), mapping Java objects to relational databases to optimize data retrieval and updates.
- Authored and refined complex SQL queries, triggers, and functions within Oracle databases, enhancing data handling and performance.
- Leveraged the Spring Boot framework extensively to develop robust application solutions tailored to business needs.

- Deployed and managed Docker containerized applications using Kubernetes, ensuring scalability, load balancing, and efficient management across various environments.
- Architected and implemented microservices using Spring Boot, integrating with AWS services to deploy solutions through the AWS Admin Console using Docker and Amazon EC2.
- Engineered dynamic and interactive user interfaces with React, enhancing user engagement and accessibility across web applications.
- Collaborated closely with UX/UI designers, utilizing Redux for state management to ensure a cohesive and user-friendly interface.
- Crafted RESTful APIs and server-side components using Java and Spring Boot, connecting with various databases such as MongoDB and PostgreSQL, and integrating external APIs for expanded functionality.
- Participated actively in all phases of the Software Development Life Cycle (SDLC), from requirement analysis to design, implementation, and testing, ensuring thorough alignment with project objectives.
- Designed and implemented RESTful services and APIs, following best practices, facilitating seamless interactions within microservices architectures and front-end interfaces.
- Utilized Java 17's improved exception handling and enhanced switch expressions for better control flow and error management within backend systems.
- Managed AWS-hosted Hadoop EMR clusters, optimizing data processing and analysis capabilities.
- Orchestrated Kafka integration with cloud platforms like AWS, leveraging Kafka Connect and Kafka Streams to facilitate scalable and resilient data processing pipelines.
- Implemented Component-Based Architecture in both React and Angular, leveraging reusable UI components to standardize frontend development.
- Implemented Angular 12 Services to handle communication between components and backend APIs, optimizing data flow and reducing redundancy.
- Integrated Kubernetes with CI/CD pipelines using tools like Jenkins and GitLab CI/CD, enabling continuous integration, automated testing, and seamless deployment of containerized applications.
- Integrated WebSocket for Real-Time Claim Tracking in React and Angular to enable instant updates on insurance claims.
- Provided backend support for React applications, including database management, server-side logic, and API development in Java technologies.
- Implemented comprehensive data management strategies in MySQL, including regular backups, data migration, ETL processes, and security measures to safeguard sensitive information and ensure data integrity.
- Enhanced Application Security using OAuth, JWT Authentication, and Role-Based Access Control (RBAC).
- Engaged in continuous testing and maintenance using JUnit to guarantee high software quality and reliability.
- Administered a range of AWS services including VPC, EC2, S3, RDS, Redshift, Data Pipeline, EMR, DynamoDB, Lambda, SNS, and SQS, enhancing cloud infrastructure efficiency and scalability.
- Developed and maintained multiple microservices using Spring Boot, managing large data volumes within MongoDB-sharded cluster environments, ensuring optimal performance and availability.
- Provided production support, addressing bug fixes and application enhancements to maintain service continuity and user satisfaction.

Full-Stack Software Developer
Target Corporation, Minneapolis, MN

April 2019 – May 2021

- Led the development of responsive web interfaces using AngularJS, HTML5, CSS3, and Bootstrap to optimize the online shopping experience for retail customers.
- Built scalable Microservices with Java, Spring Boot, and AWS for efficient deployment and management.
- Developed dynamic Angular applications, enhancing user interaction and frontend functionality.
- Integrated AngularJS with MVC architecture to enhance frontend development, collaborating with backend teams to ensure seamless data integration.
- Deployed and managed applications on AWS (EC2, S3, Elastic Load Balancer), ensuring high availability and scalability.
- Developed RESTful APIs with Spring Boot for seamless frontend-backend communication.
- Conducted unit and integration testing with JUnit and Mockito, ensuring application robustness.

- Optimized SQL database interactions with complex queries and stored procedures in Oracle SQL, improving data processing efficiency for retail analytics.
 - Managed continuous integration and delivery processes using Jenkins and Maven, automating builds and deployments to enhance operational efficiency.
 - Utilized AngularJS to implement advanced frontend features such as dynamic form validation and custom data filters to improve user experience.
 - Automated CI/CD Pipelines using Jenkins, GitHub Actions, and GitLab CI/CD, streamlining code deployment for Angular 12 and Java Spring Boot applications.
 - Configured and maintained Oracle SQL databases with a focus on performance tuning and query optimization, supporting high transaction volumes in the retail sector.
 - Leveraged Java and Spring Security to enforce robust security protocols, protecting sensitive customer data and retail transactions.
 - Optimized performance with Lazy Loading, Preloading Strategies, and Code Splitting, reducing initial page load time for high-traffic shopping pages.
 - Developed Python Scripts to Automate Java Application Builds & Deployments, integrating with Maven, Gradle, and Jenkins for seamless CI/CD workflows.
 - Designed and implemented custom user interfaces with AngularJS and Bootstrap, tailoring the look and feel to meet specific retail brand guidelines.
 - Leveraged AWS CloudWatch and Auto Scaling to monitor performance and adjust resources dynamically.
 - Utilized NgRx for State Management, improving efficiency in handling large-scale retail data across components.
 - Collaborated closely with UX/UI designers to translate design concepts into functional and aesthetically pleasing web components using AngularJS.
-

Java Developer
Salesforce, San Francisco, CA

June 2017 – March 2019

- Developed enterprise applications using Java, employing design patterns such as MVC, Business Delegate, DAO, and Session Facade to structure the application architecture.
 - Utilized Java Database Connectivity (JDBC) and Hibernate ORM for data access and manipulation, crafting complex HQL queries for efficient database interactions.
 - Integrated Java-based Spring Framework with Hibernate for robust ORM capabilities, utilizing Hibernate Annotations for mapping Java objects to Oracle database tables.
 - Developed robust RESTful APIs using Java with Spring Boot, enhancing application functionalities with Spring Security, Spring JPA, and Spring Web Flow.
 - Built and maintained Java-based single-page applications (SPAs) using AngularJS, synchronizing data between the DOM and server effectively.
 - Developed and Optimized SQL & PL/SQL Queries for Salesforce Data Synchronization, ensuring smooth data migration between Oracle 11g/12c and Salesforce.
 - Fix defects as needed during the QA phase, support QA testing, troubleshoot defects and identify the source of defects.
 - Implemented Java-based configuration and management of Spring Beans within the Spring Core framework, optimizing application performance and scalability.
 - Integrated Role-Based Access Control (RBAC) with Salesforce OAuth 2.0, securing access to CRM data based on user permissions
 - Created and deployed multiple Kubernetes clusters on AWS using Java applications packaged in Docker containers to ensure high availability and testing efficacy.
 - Implemented AWS Elastic Load Balancer (ELB) and Auto Scaling, ensuring seamless performance for Salesforce-related applications.
 - Involved in deploying and testing the application on JBoss server and using Maven tool to build the application.
 - Addressed production issues and user interactions, documenting system functionalities and changes thoroughly to maintain high standards of application reliability and usability.
-
