PROFESSIONAL SUMMARY

Full Stack Java Developer with deep experience in backend development, distributed systems, and cloud architectures. Specialized in Java, Spring Boot, microservices, AWS, Docker, and Kubernetes, with additional capabilities in React, Angular, and data engineering tools such as Airflow, Redshift, and Kafka. Adept at building API-driven platforms, optimizing large-scale data workflows, and implementing CI/CD automation using GitLab, Jenkins, and Terraform. Proven track record of contributing to enterprise transformation projects, enhancing system reliability, and implementing security standards aligned with industry best practices.

TECHNICAL SKILLS

- **Programming Languages:** Java (8/11, 17), Python, Swift, Typescript, Java Script
- **Frameworks & Tools:** Spring Boot, Apache Airflow, Docker, Kubernetes
- **Frontend Tools:** Angular (12, 15), React, Typescript, Java Script, Html, CSS
- **Cloud Platforms:** AWS (EKS, Redshift, S3, Lambda, API Gateway), OpenShift
- **Databases:** Oracle, AWS Redshift, Amazon RDS
- **DevOps & CI/CD:** Jenkins, GitLab, Terraform, Ansible, CI/CD pipelines
- **Containerization & Orchestration:** Docker, Kubernetes, OpenShift
- **Monitoring & Logging:** Prometheus, Grafana, Splunk, Dynatrace, AWS CloudWatch, ELK Stack
- **APIs:** RESTful, SOAP, GraphQL, Swagger
- **Data Management:** ETL processes, Apache Kafka, data migration strategies, data quality checks
- **Data Visualization:** Power BI, Tableau
- **Security:** AWS IAM, OAuth2, JWT, Single Sign-On (SSO), security audits
- **Agile Methodologies:** Scrum, Agile ceremonies, sprint planning, retrospectives
- **Version Control:** Git, GitLab
- **Performance Optimization:** Java tuning, SQL performance tuning, caching (Redis), query optimization
- **Scripting:** Shell scripting
- **Data Processing Frameworks:** Apache Airflow, Apache Kafka

EDUCATION

Southeast Missouri State University

Master's, Applied Computer Science

PROFESSIONAL EXPERIENCE

New York Life Insurance Company

Full Stack Java Developer

New York, NY, USA

August 2023 – Present

- Led Agile ceremonies such as sprint planning, stand-ups, and retrospectives to improve collaboration and maintain steady development progress.
- Designed and implemented cloud-native systems on AWS using EKS, Redshift, S3, and related services to support scalable and secure workloads.
- Built and maintained microservices using Spring Boot and Docker, enabling modular development and streamlined deployment practices.
- Integrated Apache Kafka to support event-driven communication and real-time data processing across distributed services.
- Developed Angular applications using HTTP Client for seamless integration with RESTful Spring Boot APIs.

- Utilized Logscale, Splunk, and Dynatrace to enhance observability, troubleshoot issues, and monitor application performance.
- Automated data workflows with Apache Airflow to support consistent ingestion, transformation, and processing operations.
- Managed Kubernetes workloads through OpenShift, ensuring efficient resource utilization and reliable application deployments.
- Performed Oracle database migrations, backups, and recovery tasks to maintain data integrity and system stability.
- Built serverless components using AWS Lambda and API Gateway to improve scalability and reduce infrastructure management overhead.
- Developed enterprise front-end features using Angular 15 and standalone components to enhance maintainability and modularity.
- Implemented CI/CD automation in GitLab to streamline build, test, and release pipelines for backend and frontend services.
- Optimized Java applications to improve stability, responsiveness, and backend processing efficiency.
- Applied Terraform for infrastructure provisioning, enabling consistent and automated cloud environment setups.
- Integrated Prometheus and Grafana for monitoring system behavior, service health, and performance across environments.
- Collaborated with product owners, QA teams, and other stakeholders to define scope, clarify requirements, and deliver high-quality features.
- Modernized front-end architecture by migrating legacy JavaScript/Thymeleaf views into Angular 15 for improved scalability.
- Created interactive dashboards in Power BI and Tableau to support data insights and decision-making across teams.
- Implemented AWS IAM, VPC configurations, and encryption standards to enforce strong security practices and protect sensitive data.
- Created complex reactive forms in Angular to support insurance and financial data workflows with dynamic validation rules.
- Conducted code reviews, set coding standards, and supported best practices to maintain code quality across teams.
- Built Python-based automations for data validation and quality assurance, reducing manual intervention in data workflows.
- Authored and maintained API documentation using Swagger to support integration and onboarding efforts for internal developers.
- Implemented Redis and AWS ElastiCache to improve application performance by reducing database load and enabling efficient caching.
- Troubleshooted production issues across backend and frontend systems, ensuring stable operation and minimal service disruption.
- Mentored junior developers and provided guidance on full-stack engineering, cloud-native patterns, and microservice architecture.
- Developed disaster recovery procedures and validated failover strategies to maintain business continuity.
- Explored new tools and emerging technologies to enhance development processes, system performance, and team efficiency.
- Leveraged GitHub Copilot and AI-assisted tools to support code generation, refactoring, and faster development cycles.
- Designed and delivered AWS-based microservices supporting SaaS platforms using EKS, Lambda, and Redshift architectures.
- Integrated Node.js microservices with Spring Boot services to ensure smooth backend communication and unified system behavior.

Delta Airlines

Senior Java Developer

Atlanta, GA, USA

August 2020 - July 2023

- Contributed to all stages of the SDLC, including requirement gathering, solution design, development, testing, deployment, and long-term application maintenance.
- Built a data platform on AWS Redshift to centralize information from multiple sources, improving analytics capabilities and supporting business intelligence needs.
- Designed and consumed RESTful and SOAP APIs to ensure secure, scalable, and efficient communication across distributed systems.
- Configured integrations with LDAP and Active Directory to streamline authentication workflows and strengthen security across enterprise applications.
- Automated system administration tasks on Linux servers using shell scripting to improve efficiency and reduce manual operational work.
- Modernized front-end architecture by migrating legacy UI components to Angular 12, taking advantage of Webpack 5 improvements and Ivy compilation features.
- Developed automated ETL pipelines using Apache Airflow to support regulatory reporting and ensure consistent, accurate data movement.
- Deployed serverless components with AWS Lambda and API Gateway to simplify backend processing and reduce operational overhead.
- Used Terraform to automate infrastructure provisioning and enforce consistent environment configurations across all stages of deployment.
- Integrated automated testing frameworks such as JUnit and Selenium into CI/CD workflows to improve test reliability and reduce deployment issues.
- Implemented scalable styling in Angular using Sass and CLI-based tooling to support enterprise-level UI design systems.
- Created dashboards and reporting solutions using Power BI and Tableau to deliver real-time insights into operations, performance, and business trends.
- Implemented OAuth2 and JWT-based authentication mechanisms to support secure access control and modern identity management standards.
- Improved version control practices through code reviews, branching strategies, and collaborative development using Git and GitLab.
- Enhanced the performance of large-scale data workflows by optimizing queries, implementing partitioning strategies, and introducing advanced caching techniques.
- Collaborated with UX/UI teams to create user-centric interfaces while ensuring compliance with accessibility and usability guidelines.
- Configured monitoring and alerting with AWS CloudWatch and Prometheus to support proactive diagnostics and maintain system reliability.
- Used Ansible for configuration management to automate environment setup and reduce inconsistencies during deployments.
- Applied Angular techniques such as lazy loading and route guards to improve application performance and strengthen security.
- Supported team development by sharing knowledge, reviewing code, and promoting best practices in modern cloud-native engineering.
- Documented system designs, workflows, and operational procedures to support maintainability and future enhancements.
- Optimized database performance through efficient query design, indexing strategies, and schema refinements for high-volume datasets.
- Participated in Agile processes by helping refine backlog requirements, estimate work, and deliver functionality aligned with compliance goals.
- Conducted application security reviews and implemented SSO integrations to improve user access management and meet corporate security standards.
- Integrated GraphQL to improve data access patterns, streamline client-server communication, and support real-time analytics use cases.

Albertsons

Junior Java Developer

Boise, ID, USA

February 2019 – July 2020

- Contributed to Agile development teams by participating in sprint planning, stand-ups, and retrospectives, helping to deliver reliable software on time.
- Developed and enhanced backend services using Java and Spring Boot, building robust RESTful APIs to support scalable and high-performing applications.
- Participated in Agile sprints, contributing to user story refinement and demo sessions focused on React UI features.
- Deployed cloud-native applications using AWS services such as EC2, S3, RDS, and Lambda, improving scalability, performance, and cost-efficiency.
- Implemented and maintained CI/CD pipelines in GitLab, automating builds, tests, and deployments to streamline release processes and reduce manual errors.
- Created containerized services using Docker and managed orchestration through Kubernetes, increasing deployment flexibility and system resilience.
- Developed interactive web interfaces using React.js, enabling responsive, user-friendly features for internal business applications.
- Designed and maintained ETL workflows for transforming and loading data into data warehouses, supporting better data accessibility and reporting.
- Used Apache Airflow to schedule and monitor data pipelines, ensuring consistent and timely delivery of business-critical data.
- Wrote frontend unit tests using Jest and React Testing Library, ensuring component stability and UI correctness.
- Applied optimization techniques like data partitioning, query tuning, and compression to enhance data processing speed and system efficiency.
- Participated in the transition from monolithic architecture to microservices, contributing to more modular, scalable, and maintainable applications.
- Wrote comprehensive unit tests using JUnit and Mockito, helping to maintain high code quality and minimize production defects.
- Integrated monitoring and logging tools such as Prometheus and the ELK Stack, improving visibility into application performance and simplifying troubleshooting.
