

Joseph Chuck

DevSecOps Engineer

Location: Houston, TX.

Mobile: +1(281)-466-8512

Email: jossphchuck@gmail.com

Summary:

- Highly skilled and motivated Application Security and DevSecOps Engineer with **8+** years of experience in designing, implementing, and securing CI/CD pipelines, cloud infrastructure, and applications. I am seeking a challenging position where can utilize my expertise in DevSecOps, Application security, and automation to drive secure and efficient software development and deployment practices.

Key Skills:

- **DevOps Tools and Technologies:** Jenkins, Git, Dockers, Ansible, Terraform, AWS, Azure, GCP
- **Security Tools and Technologies:** OWASP Zap, Nessus, Burp Suite, Nmap, SAST, SCA, DAST, IAST, SBOM.
- **Continuous Integration/Continuous Delivery (CI/CD):** Building secure pipelines, automating testing and deployment Processes.
- **Infrastructure as Code (IaC):** Terraform, Cloud Formation, Ansible
- **Cloud Security:** AWS Security Groups, Azure Security Center, GCP Security Command Center
- **Application Security:** Secure coding practices, vulnerability scanning, penetration testing
- **Incident Response and Forensics:** Incident handling, log analysis, digital forensics
- **Compliance and Risk Management:** GDPR, HIPAA, ISO 27001, NIST
- **Collaboration and Communication:** Agile, Scrum, Jira, Confluence

Educations:

- **Master of Science in Technology Management**, University of Arizona Global Campus **Apr 2024**
- **Bachelor's in Information Technology**, University of Phoenix, Arizona **2022**

Certifications:

- **Certified Information Security Manager(CISM)**
- **CompTIA Security+**
- **AWS Certified.**
- **Advance Networking Certificate from University of Phoenix**

Experience:

Company: CGI, Houston, TX

Feb 2019-Current

Role: Senior DevSecOps Engineer

Responsibilities:

- Designed and implemented secure CI/CD pipelines using Jenkins, Bitbucket, GitLab and Dockers, ensuring that applications are built and deployed with SCA, SAST, and DAST integrated to scan for security vulnerabilities.
- Integrated automated security testing tools such as OWASP ZAP into CI/CD pre-production pipelines which aid identifying and mitigating the security vulnerability in early stages of software development.
- Using SAST tools to identify the security vulnerability in source code using tools such as SonarQube and OWASP SCA for dependency check.
- Conducted manual security assessments and penetration testing of applications, infrastructure, and cloud infrastructure to identify and remediate security weaknesses.
- Collaborated with cross-functional teams to ensure compliance with industry standards and regulatory requirements.
- Provided security training and awareness sessions to development teams, promoting secure coding practices and security mindset.
- Managed and secured the CI/CD pipelines using Jenkins and Git, integrating security testing and scanning tools like Zap and SonarQube.
- Collaborated with development teams to implement secure coding practices and perform code reviews for security vulnerabilities.
- Performed threat modeling, and security audits to identify and mitigate risks across cloud infrastructure and application lifecycle.
- Evaluate automation testing results for accuracy and assign risk-based priorities effectively.

- Offer technical guidance and direction for remediation of security weaknesses.
- Identify gaps and propose solutions to increase security efficiency and effectiveness.
- Stay updated on the latest cyber security trends, threats, and technologies to proactively address emerging risks.
- Serves as subject matter expert regarding security best practices.
- Implement Nexus private registry to prevent 0-day build package vulnerabilities.
- I use checkov to scan cloud config file for security misconfiguration before deployment.

Company: Fulgent Genetics, TX.
Role: Cyber security Analyst.

Jan 2016- Jan 2019

Responsibilities:

- Proactively monitored, investigated, and mitigated security incidents to maintain organizational cyber integrity.
- Analyzed network security event data using IDS and SIEM tools to identify and assess threats. Conducted static malware analysis in isolated virtual server environments to evaluate suspicious software.
- Monitored security events to identify and assess potential intrusions and malicious activities. Analyzed logs from firewalls, emails, web, and DNS to proactively identify and mitigate intrusion attempts.
- Performed in-depth log analysis utilizing Splunk to detect anomalous activities and streamline incident response.
- Identified and evaluated potential, successful, and unsuccessful intrusion attempts by analyzing event details and summary information.

Company: Fulgent Genetics, TX.
Role: Help Desk Specialist.

Aug 2014- Jan 2016

Responsibilities:

- Monitor and respond quickly to incoming requests relate to IT issues.
- Responsible for PC's, Printers, Servers, and related equipment (monitor, keyboard, mouse, hard drive, etc.).
- Maintain user PCs, including upgrades and configuration as needed.
- Work with bit ticket system and Monitor network and device using Zabbix tool & setting up network transfer.
- Print photo ID badges and active their badges to have limited access to the building according to their job function.
- Setting up ringing camera and nest thermostats. Creating AD account and company Gmail account.
- Involved in decision making in what IT related device is good to purchase and install them.
