Summary

Resourceful and results-driven Database Administrator with 7+ years of experience in managing, optimizing, and securing databases in both on-premises and cloud environments. Adept in designing and administering scalable, fault-tolerant, and high-performance cloud-based applications and services using Microsoft Azure, Amazon AWS and Oracle Cloud. Expertise spans multiple database technologies, including SQL Server, Oracle, PostgreSQL, and MySQL. Specialized in performance tuning, backup and recovery, database migration, security, and high availability/disaster recovery solutions. Proven success in SQL Server database administration with deep knowledge of T-SQL, PowerShell, SSIS, SSRS, and Azure VM. Experienced in migrating on-prem SQL databases to SQL Azure and supporting 24/7 production environments. Committed to delivering optimal performance and ensuring business continuity through innovative solutions and strong collaboration. Dedicated to leveraging my skills in cloud architecture and database management to drive operational efficiency, security, and reliability.

Skills

- Database Performance Tuning
- Disaster Recovery Planning
- Database Monitoring and Troubleshooting
- Data Migration and Management
- High-Availability Systems Design
- Storage Management and Optimization
- Database Security and Encryption
- SQL Query Optimization
- Automated Database Maintenance
- Database Design and Architecture
- Cloud Database Services
- Data Warehousing and ETL processes
- Capacity Planning
- Cloud Database Solutions
- Compliance and Audit Management
- Database Scalability Strategies
- Scripting and Automation (PowerShell, Bash and Python)
- Data Backup and Recovery Techniques
- Understanding of Distributed Database Systems
- Knowledge of NoSQL and NewSQL Databases
- Proficiency with Database Management Systems (Oracle, SQL Server, MySQL, PostgreSQL)
- Collaboration and Teamwork

Experience

Senior Database Administrator

TT New World Technology

02/2023 - 01/2025

- Consistently revised database schemas in accordance with development demands while maintaining synchronization across platforms.
- Deployed and managed basic Azure services including Azure SQL Database, Azure Blob Storage, and Azure VMs for testing and development environments.
- Manage and maintain SQL Server databases in Azure environments
- Develop and execute database migration strategies between Azure and on-premises environments
- Implemented integration management and maintenance of APIs, SSIS, Logic Apps, Power Automate, and Oracle Integration Cloud
- Set up and manage database servers and processes, including tracking system health and performance, to guarantee optimal performance, availability, and security
- Administered and managed SQL Server Reporting Services and implemented high availability using Failover Clustering, Replication, Log-Shipping, Mirroring, and AlwaysOn
- Optimized the performance of databases by modifying queries, removing unnecessary columns, eliminating redundant and inconsistent data, normalizing tables, establishing joints, and creating indexes whenever necessary.
- Implement and manage automated tasks using T-SQL and other tools.
- Provide technical assistance to end users for M365 applications and cloud-based solutions.

- Created interactive dashboards and visual reports using Power BI to support data-driven decision-making for business stakeholders.
- Connected Power BI to various data sources (Excel, SQL Server, SharePoint) and performed basic data modeling, transformation, and visualization.
- Executed automated backups and disaster recovery procedures to secure company data and ensure continuity in the event of system failure.
- Assisted with configuring Oracle Cloud Infrastructure resources like Compute, VCN, and Autonomous Databases for development and staging environments.
- Supported database migrations and backups in OCI, including Data Pump operations and database patching in cloud-hosted Oracle DB instances.
- Designed, implemented, and maintained Oracle Identity Management solutions, ensuring secure and efficient identity lifecycle management.
- Built and deployed basic SSIS packages for importing, transforming, and loading (ETL) data between flat files and SQL Server databases.
- Utilized SSIS tools like Data Flow, Control Flow, and Connection Managers to automate routine data movement and transformation tasks.
- Helped analyze and redesign the infrastructural architecture of our environments to meet both operational and security requirements while optimizing cost.
- Supported provisioning of AWS services such as EC2, S3, and RDS for database testing and migration scenarios.
- Utilized AWS Management Console and basic CLI commands to manage infrastructure and conduct system health checks.
- Installed and configured Oracle enterprise manager cloud control 13c on both windows and Linux servers.

SQL/Azure Database Administrator

Metro Social Services

01/2020 - 01/2023

- Worked alongside other software engineers to create optimized, manage SQL code
- Implement monitoring and instrumentation strategies for applications and databases.
- Implement source control strategies and manage repositories.
- Develop and execute database migration strategies between Azure and on-premises environments
- configuring role-based access control (RBAC), monitoring resources via Azure Monitor, and managing costs using Azure Cost Management.
- coordinated and executed migration of databases both to both azure SQL databases and azure managed instance databases.
- Create, configure, and manage databases on Azure using services like Azure SQL Database, Azure SQL Managed Instance, Azure Database for MySQL, Azure Database for PostgreSQL, and Azure Cosmos DB.
- Set up database servers and implement high availability configurations using features like Azure Availability Zones and Geo-Replication.
- Implement security best practices, including configuring firewall rules, Virtual Network Service Endpoints, and Authentication methods (Azure Active Directory).
- Monitored and managed multi-terabyte databases in azure which includes implementing security measures, monitoring cost and performance and working on improving performance.
- Develop and manage CI/CD pipelines using Azure DevOps
- Develop and maintain build and release pipelines.
- Ensure security and compliance in DevOps practices.
- Implement monitoring and instrumentation strategies for applications and databases.
- Configured auto-scaling for Azure SQL Database and other Azure database services to handle varying workloads.
- Automate routine tasks, such as backups, patching, and scaling, using Azure Automation, PowerShell, Azure CLI.
- Ensure databases comply with organizational policies and industry standards (GDPR, HIPAA, PCI-DSS).
- Perform tests and evaluations to safeguard data security, privacy, and integrity to include application of different security requirements to meet audit requirements
- Configured, deployed, and maintained various database performance monitoring tools like Redgate and Datadog, performance monitor, task manager.
- Apply patches and perform other maintenance both scheduled and ad-hoc to ensure database runs at an optimal level and with the highest possible security.

- Implemented robust role-based access control (RBAC) and fine-grained entitlements to enhance security and meet compliance requirements.
- Streamlined IAM operations through automation and integration with enterprise applications and directory services.
- Assisted in full system upgrades to include database, operating system, middleware (WebLogic and OHS servers), and application upgrades.
- Assisted system owners and end users with cos optimization and cutting cost by evaluating system and getting rid of aspects of system that were costly and replacing with more efficient and cost-effective methodologies.
- Installed and configured oracle WebLogic on both windows and Linux servers.
- Installed and managed certificates on WebLogic servers.
- Performed migration from different versions of WebLogic servers to include different environments,
- Managed applications deployed on the WebLogic console.
- Installed and managed various java versions to manage the WebLogic server on both windows and Linux platforms.
- Performed planning, migrating, and testing on oracle database components to Amazon AWS cloud.
- Created EBS, S3 and glacier buckets for EC2 instances on AWS.
- Created and managed amazon IAM policies and VPCs.
- Helped in the implementation of Risk Management Framework (RMF). Coordinating with other Information Assurance stakeholders to ensure maximum security and well defined and auditable procedures for database.
- Configured and implemented high availability and replication of database using Oracle data guard to ensure continuity.
- Automated tasks using window's server manager event and tasks schedule to achieve maximum performance and save manpower and time.
- Performed Oracle's PSU/CPU patches and some other interim patches to ensure optimal security and performance of different database components.
- Assisted in the drafting and documentation of tasks and procedures to enable and facilitate execution and operation.
- Assisted with change management to include the creation of an incident's response plan, and an audit plan to ensure data availability, integrity, and maximum security.

Education and Training

Ivano Frankivsk National Technical University | 07/2016
Bachelor of Science: Engineering

Certifications

- DP 300 : Azure Database Administrator Associate
- DP 900 : Microsoft Azure Fundamentals
- AZ 900 : Microsoft Azure Data Fundamentals
- AWS Certified Solutions Architect – Professional
- COMPTIA Security+ CE
- Oracle Certified Associate (OCA) 12c certification
- Oracle SQL fundamentals
- ACA-900: Jira Software Essential
- ACA-905: JIRA Jira Board Administration
- Certified Scrum Master

- **SQL Server Tools:** SQL Server Management Studio (SSMS), SQL Profiler, SQL Server Integration Services (SSIS), SQL Server Reporting Services (SSRS), SQL Server Analysis Services (SSAS).
- **Oracle:** Oracle Enterprise Manager, Data Pump, Export/ Import, Oracle Universal Installer, Database Configuration Assistant, Database Upgrade Assistant, SQL*Plus, Apex and iSQL*Plus, Oracle cloud Control 12c (OEM), Oracle 10g R1&2, 11g R1&2 and 12c, WebLogic console
- **Cloud Tools:** Azure Portal, AWS Management Console, CloudWatch, AWS CLI, Oracle cloud.
- **Monitoring Tools:** Nagios, Zabbix, SolarWinds, Redgate SQL Monitor, T-SQL
- **Others:** PowerShell, Bash, Docker, Kubernetes for containerized database management, Jira, Splunk, Sybase central
