Senior Systems & Network Administrator

Professional Summary

Seasoned IT professional with over 30 years of experience designing, administering, and securing enterprise-scale Windows and network infrastructures. Skilled in Active Directory, Group Policy, Azure, virtualization, and disaster recovery, with a proven ability to manage and optimize complex hybrid environments. Known for being the “go-to problem solver” who restores uptime, strengthens security, and simplifies operations through smart automation and meticulous attention to detail. Hands-on, results-driven, and dedicated to maintaining stable, secure, and high-performance systems for users across the globe.

Core Competencies

- Systems Administration: Windows Server (2012–2025), Active Directory, DNS, DHCP, Group Policy, File Services
- Network Administration: VLANs, Firewalls, VPNs, QoS, SD-WAN, LAN/WAN Design & Optimization
- Virtualization & Cloud: VMware, Hyper-V, Citrix, Azure, AWS, Office 365, Intune
- Identity & Security: Azure AD, Conditional Access, MFA, Zero Trust, Endpoint Security, Patch Management
- Backup & Recovery: Veeam, Azure Replication, Disaster Recovery Planning, Business Continuity
- Automation & Monitoring: PowerShell, RMM Tools, SIEM/SOC Integration, Performance Tuning
- Collaboration & Communication: End-User Support, Vendor Coordination, Team Leadership, Documentation

Professional Experience

- Senior Technical Specialist | RWS Group (Regulated Industries Division) | 2017 – Present
 - Restored a full production environment within 72 hours of a ransomware attack, protecting over 100 TB of data using Azure replication and robust recovery workflows.
 - Administered and optimized Azure infrastructure, Intune, and M365 security policies for 400+ users across multiple countries.

- Led enterprise migration from on-prem systems to Azure Cloud, modernizing servers, networking, and identity management under a unified, secure architecture.
 - Managed Group Policy, AD, DNS, DHCP, and file servers to maintain stability and security compliance.
 - Implemented SD-WAN across global sites to improve network reliability, bandwidth efficiency, and VPN performance.
 - Collaborated with cybersecurity teams to deploy EDR, SIEM monitoring, and vulnerability management processes across endpoints and servers.
- Senior Systems Engineer | The Walker Group | 2011 – 2017
 - Designed and maintained VMware, Nutanix, and Hyper-V virtualized environments supporting hundreds of users.
 - Migrated multiple client organizations to Office 365 and hybrid Exchange environments with minimal downtime.
 - Configured and secured Cisco and SonicWall firewalls, VPN tunnels, and multi-site connectivity.
 - Implemented and documented backup, imaging, and disaster recovery solutions using Veeam and ShadowProtect.
 - Provided Tier 3 escalation support and root-cause analysis for complex server and networking issues.
- Senior Network Engineer / Team Lead | The Computer Company | 2005 – 2011
 - Led technical projects for large-scale Exchange, VoIP, and VPN deployments across enterprise clients.
 - Oversaw patch management, network segmentation, and performance optimization for Windows environments.
 - Directed Tier 3 support operations and mentored junior engineers in troubleshooting and escalation best practices.
 - Deployed server clustering and redundant storage architectures, achieving high availability and reliability for client systems.
- Systems Administrator | CIGNA Healthcare | 2004
 - Supported and secured HIPAA-regulated lab environments for system testing and application validation.
 - Managed server imaging, patch compliance, and backup retention across Windows Server environments.
- Performance Specialist / Systems Administrator | The Hartford | 2001 – 2003
 - Monitored and tuned over 1,000 Windows servers, ensuring consistent uptime and compliance with corporate standards.

- Contributed to capacity planning, audit preparation, and infrastructure optimization efforts.
- Senior Network Engineer | Centermark Technologies (MasterX) | 1992 – 2001
 - Provided end-to-end systems and network administration for enterprise clients with up to 1,200 users.
 - Managed Windows Server, Active Directory, Exchange, and network infrastructure deployments.
 - Implemented secure remote access and disaster recovery processes to ensure business continuity.

Certifications

- CISSP – Certified Information Systems Security Professional
- CCNA – Cisco Certified Network Associate
- MCSE – Microsoft Certified Systems Engineer (Security & Infrastructure)
- MCITP – Enterprise Administrator (Windows Server 2008)
- MCSA – Microsoft Certified Systems Administrator

Education

Computer Science Studies — Southern Connecticut State University

Additional Highlights

- Experienced in multi-tenant Azure/Entra integration, Citrix administration, and cross-domain AD synchronization.
- Reduced cloud operating costs by 61% through resource optimization and policy enforcement.
- Expert in PowerShell scripting for automation, reporting, and user provisioning.
- Recognized for rapidly identifying root causes of performance issues and restoring service continuity with minimal disruption.
