Sr Dotnet Developer

PROFESSIONAL SUMMARY:

- IT professional with 11+ years of experience in project life cycle, analysis, design and development of Web Applications & Database Design using the technologies like ASP.NET, C#, MVC, Angular, VB.Net, JQuery, MS Azure, AWS, XML, MS SQL Server.
- Experience in front-end technologies like **JavaScript, Bootstrap, HTML5, and CSS** for creating responsive designs.
- Implemented client-side interfaces using React.js to build stable components for future page integration and utilized React-Router to enhance user experience by transforming applications into **single-page applications (SPAs)**.
- experience in **designing, developing, and implementing scalable** web applications and database solutions using the Microsoft tech stack, including **ASP.NET Core, C#, and SQL Server**.
- I have a proven track record in cloud computing with hands-on experience in AWS and Azure, leveraging services such as **AWS Lambda, Azure Functions, and AWS Elastic Kubernetes Service (EKS)** to build resilient, event-driven architectures.
- Skilled in creating and integrating microservices and RESTful APIs, I collaborate effectively with cross-functional teams to deliver high-quality software solutions. My expertise includes adopting CI/CD practices with tools like **GitLab, Jenkins, and Azure DevOps, streamlining development processes** through automation and optimization.
- Proficient in applying design patterns and coding best practices, including **Test-Driven Development (TDD) and CQRS**, I excel in assessing opportunities for application and process improvements. With strong analytical and problem-solving skills, I am dedicated to enhancing application performance and driving continuous improvement in software development projects.
- Experienced in using message brokers such as **ActiveMQ and RabbitMQ** for efficient communication between distributed systems, integrating messaging systems to enhance data processing and event-driven architecture in applications.
- Extensively used Telerik controls, including **RadGauge and Chart Control**, to create dynamic visual representations of data and developed interactive dashboards for data insights, improving decision-making processes.
- Implemented unit tests with **Jasmine** and Jest to ensure code reliability and maintainability, using **NgRx** for state management to enhance application performance and consistency.
- Developed **ASP.NET Core Web APIs** based on departmental specifications, ensuring alignment with business requirements, and utilized advanced MVC concepts for backend development to improve application scalability and performance.
- Proficient in using **ADO.NET** for data access, enabling seamless communication between .NET applications and databases. Developed robust data access layers with DataSets and DataReaders, facilitating efficient data handling and transaction management.
- Strong expertise in creating database tables, indexes, triggers, and performance tuning for optimized data retrieval, developing and maintaining **PL/SQL** scripts for automating data manipulation tasks and generating custom reports.
- Hands-on experience with **Microsoft Azure and AWS**, including deploying applications and managing resources in the cloud, utilizing Azure Data Factory for data extraction to ensure efficient data integration and transformation.
- Expertise in **database design and management**, creating optimized queries and stored procedures to enhance application performance.
- Skilled in implementing indexing strategies and executing complex **SQL operations** for efficient data retrieval and manipulation.
- Expertise in N-Tier architecture and Microservices for building scalable applications, managing Kubernetes environments on **Google Cloud Platform (GCP)** to ensure robust application deployment and monitoring.

- Developed and consumed **REST and SOAP** web services, enhancing application interoperability, with experience in tools like **SOAPUI and Postman** for testing and troubleshooting web services.
- Designed responsive web and mobile applications using **Angular and Xamarin**, ensuring optimal user experience, with a comprehensive understanding of Angular components, **NgModules**, services, and dependency injection for effective UI design.
- In-depth knowledge of all phases of the **Software Development Life Cycle (SDLC)**, from analysis and design to implementation, involved in project planning, execution, and maintenance to ensure successful delivery of software solutions.
- Experience with containerization technologies like Docker and orchestration tools like Kubernetes for deploying microservices.
- Experience in automated testing frameworks like **NUnit, Moq**, or Selenium for ensuring code quality and reliability.
- Familiarity with **Test-Driven Development (TDD) practices** to enhance code maintainability and reduce bugs.

TECHNICAL SKILLS:

.NET Technologies:	ASP.NET, ADO.NET, ASP.NET CORE LINQ, C#.NET, WCF Services, WPF, Web Forms, SharePoint, Win Forms, .Net Framework, Dependency injection, MVC, CSLA.
Web Technologies:	HTML/HTML5, CSS/CSS3, JavaScript, Angular.JS, Node.JS XML, AJAX, J Query, Web API
Mobile Platforms:	Android, iOS
Languages:	C, C#, VB.Net, T-SQL
Internet Applications:	HTML, DHTML, Web Services, JavaScript, AJAX, CSS, XML, XSL, XSLT, XAML, WinForms, WCF, WPF, MVC, MV VM
Web Server:	Microsoft IIS
IDE:	Microsoft Visual Studio, Eclipse, Android Studio, Xcode, Xamarin Studio
Packages:	MS Office 2007/2010(MS-Word, Excel, Visio and PowerPoint)
Database:	SQL Server
Protocols:	SOAP, HTTPS, TCP/IP
Version Control Tool:	Team Foundation Server, Git and SVN.
Project Management:	MS Project, MS Office
Cloud Technologies:	AWS, Azure

WORK EXPERIENCE:

Client: DCYF, WA

Oct 2023 - Present

Role: .Net Developer

Responsibilities:

- Developed Windows Forms applications using **C# and SQL Server**, working on queries, stored procedures, views, and SSRS report development.
- Utilized Azure DevOps for version control and worked with Azure Boards and Repos to manage user stories.
- Built interactive web applications using **ASP.NET Core, Angular 9/11**, AJAX, Telerik controls, and created custom Angular directives and pipes.
- Implemented Single Page Applications (SPA) using Angular, integrating WCF SOAP/REST services and RESTful APIs through **ASP.NET** Web API.
- Designed and developed responsive user interfaces with **HTML5, CSS3, jQuery, Bootstrap**, and integrated with SQL for dynamic data.
- Conducted defect analysis, root cause analysis, and maintained legacy WinForms applications.

- Experienced with TFS, GIT, Jenkins for continuous integration, and implementing client-side validation
- with Angular.
- Provided high availability for **IaaS and PaaS** role instances in Azure, ensuring access from other services using Azure Internal Load Balancer.
- Extensively utilized **RabbitMQ** as a message broker, implementing synchronous and asynchronous messaging functions and integrating with Apache ActiveMQ on edge devices. Conducted unit tests for user interface components using **Jasmine and Karma**, maintaining high quality and reliability in development.
- Leveraged Azure Logic Apps and **Azure Service Bus** for building scalable, event-driven architectures integrated with .NET applications.
- Handled data from multiple streams using **RxJS** operators to maintain sequence and dependencies, ensuring efficient data flow.
- Designed and developed APIs using **Azure API Apps**, facilitating seamless integration with various systems.
- Developed front-end screens using **HTML5, Angular 13, Blazor, JavaScript, JSON, CSS, and Bootstrap**, ensuring a responsive user experience.
- Collaborated with clients to design and create custom **RightAngle reports** and scripts tailored to their business needs.
- Deployed web applications to Microsoft Azure Service Fabric, ensuring reliable and high-performance production environments.
- Worked with CI/CD tools like **Puppet, Chef, GIT, Artifactory, GitLab, and Jenkins** to automate build and deployment processes.
- Designed, developed, tested, tuned, and implemented **n-tier web applications and microservices using ASP.NET Core** and C#, significantly improving system scalability and modularity.
- Collaborated with development teams, enterprise architecture, and support teams to integrate various platforms and systems, utilizing **RESTful APIs and WCF services** for seamless data exchange.
- Assessed opportunities for application and process improvements, preparing comprehensive documentation outlining platform **roadmaps and optimization strategies**.
- Maintained, **troubleshoot, optimized, and enhanced existing systems**, ensuring high availability and performance of applications.
- Worked with QA and DevOps teams to adopt **CI/CD toolchains**, automating deployment processes using **GitLab and Jenkins** to facilitate collaboration and efficiency.
- Regularly communicated with technical and non-technical groups to provide product/project support and clarify project objectives.
- Designed and developed core services and components applying service-oriented architecture principles, ensuring modularity and maintainability.
- Applied design patterns and coding best practices, including **CQRS**, to enhance application performance and reliability.

Environment: C#, MVC SQL, XAML, LINQ, ADO.Net, KendoUI, MongoDB TFS, MVVM, Azure, Angular, Bootstrap, Visual Studio, HTML, CSS, JQuery, WebAPI, Unity, Blazor, NGRX store, RXJS, Redux, Jasmine, PL/SQL, Paas, Asp.Net 6, ActiveMQ, RabbitMQ, ASP.Net Core, CSLA, ASP.NET Core, C#, RESTful APIs, WCF, CI/CD, Azure DevOps, SOA, CQRS

Client: TD BANK, Cherry Hill, NJ

Dec 2021 – Sep 2023

Role: .Net Developer

- Led the design and development of scalable web applications using **ASP.NET Core 6** and **ASP.NET MVC**, ensuring robust architecture and high performance in enterprise-level solutions.
- Developed dynamic, responsive user interfaces using **HTML5, CSS3, and Angular**, leveraging Bootstrap for mobile-first design and ensuring cross-browser compatibility.

- Created RESTful APIs and SOAP-based web services for seamless integration with external systems, facilitating data exchange between different applications and services.
- Implemented **Entity Framework Core** and **ADO.NET** for efficient data access, utilizing LINQ for complex querying and ensuring optimal database interactions with **SQL Server**.
- Designed and optimized SQL Server databases, writing efficient **T-SQL** stored procedures, functions, and triggers to encapsulate business logic and improve application performance.
- Enhanced application reliability by implementing unit testing using **NUnit** and **Jasmine**, fostering a culture of test-driven development (TDD) and continuous integration.
- Deployed applications to **IIS** and utilized **Windows Server** environments, ensuring robust configuration and high availability of deployed applications.
- Integrated cloud solutions, using **AWS** and **Azure**, for deploying and scaling applications, employing services like Azure Functions and AWS Lambda to handle event-driven architecture.
- Developed and maintained legacy applications using **WCF** (Windows Communication Foundation) to ensure interoperability and seamless communication between distributed systems.
- Automated deployment processes with **Azure DevOps**, improving release cycles through CI/CD practices and enhancing collaboration between development and operations teams.
- Engaged in code reviews and pair programming sessions, establishing coding standards, and mentoring junior developers in best practices for software development.
- Utilized **CSLA** (Component-Based Scalable Logical Architecture) for building business objects, ensuring a clean separation of concerns and modular design.
- Participated in Agile methodologies, conducting sprint planning and retrospectives to improve team performance and project outcomes.
- Developed custom logging and monitoring solutions using **ASP.NET Core Middleware** and integrated with **Application Insights** for real-time performance tracking.
- Created data-driven applications that utilized **XML** for data interchange and configuration management, ensuring compatibility with various systems and formats.
- Implemented security best practices in applications, utilizing **ASP.NET Identity** for user authentication and role-based access control to protect sensitive information.
- Led the design and development of enterprise-level applications using **ASP.NET Core and MVC**, ensuring robust architecture and high performance.
- Developed dynamic responsive user interfaces **using HTML5, CSS3, and Angular, leveraging Bootstrap** for mobile-first design and cross-browser compatibility.
- Implemented RESTful APIs and cloud solutions on **AWS and Azure**, facilitating data exchange and event-driven architecture for seamless integrations.
- Utilized **Entity Framework Core and ADO.NET** for efficient data access, **implementing LINQ** for complex querying and optimal database interactions with SQL Server.
- Designed and optimized **SQL Server databases**, writing efficient **T-SQL** stored procedures and functions to encapsulate business logic and improve application performance.
- Maintained, optimized, and enhanced existing systems, conducting unit tests and collaborating with **QA teams** to improve software quality and reliability.
- Worked within Agile Scrum environments, engaging in sprint planning and retrospectives to align development efforts with business goals.
- Collaborated with QA teams to design and execute test plans, ensuring comprehensive coverage of application features and improving overall software quality.
- Contributed to documentation efforts for software design and implementation, providing clear guidelines and references for future development efforts.
- Leveraged **JavaScript** libraries for data visualization and reporting tools, allowing stakeholders to interact with data insights through user-friendly dashboards.
- Conducted performance tuning and optimization efforts, identifying bottlenecks in both application and database layers to improve response times and user satisfaction.

Environment: Visual Studio, ASP.NET 6, ADO.NET, SQL Server, T-SQL, XML, HTML5, CSS3, Angular, JavaScript, IIS, NUnit, SVN, SOAP, WCF, .NET Framework, Web Services, AWS, Azure, Jasmine, ASP.NET

Core, CSLA, Windows Server, ASP.NET Core, MVC, Angular, AWS, Azure, Entity Framework, SQL Server, T-SQL, Agile.

Client: Amazon – Seattle, WA

Nov 2020 – Oct 2021

Role: Dot Net Developer

Responsibilities:

- Employed **Agile (Scrum)** methodology for structured development across the complete project lifecycle (SDLC), including design, development, implementation, testing, and support.
- Designed and developed user-friendly web interfaces using **ASP.NET**, **ASP.NET MVC**, **C#**, **HTML**, **JavaScript**, and **Kendo UI**, ensuring responsiveness and performance.
- Created and consumed **WCF services** to integrate business logic and facilitate communication across application layers.
- Developed and maintained **RESTful APIs** with **ASP.NET Core**, implementing **JWT Token-based authentication** for secure access control.
- Adapted applications for **Windows Azure**, utilizing **SQL Azure** and Azure Queues for efficient background processing and cloud functionality.
- Built data access layers leveraging **Entity Framework**, **LINQ**, and **ADO.NET** to optimize database interactions in **SQL Server**.
- Designed and implemented advanced reporting systems using **VB.NET** and integrated with **Power BI** for data visualization and analysis.
- Integrated with cloud services such as **Azure** and **AWS**, leveraging SDKs and APIs for cloud-native application development.
- Conducted unit testing and debugging to ensure code quality and reliability, utilizing **Team Foundation Server** for version control.
- Collaborated with cross-functional teams and subject matter experts to deliver user-centric educational interfaces and applications.
- Developed data pipelines in **GCP** for ETL processes, facilitating data movement between **GCP** and **Azure** with **Azure Data Factory**.
- Provided Level III support for **IIS** and the **.NET framework** across multiple servers, ensuring optimal performance and availability in production environments.
- Conceived and developed an **IIS 6.0/ASP.NET/SQL Server** web application, generating significant cost savings for the organization.

Environment: ASP.NET, MVC, .NET Core, C#, VB.NET, ADO.NET, WCF, REST, LINQ, SQL Server, Azure, HTML, JavaScript, CSS3, Kendo UI, Power BI, GCP, IIS.

Client: CPG INC – India

Oct 2016 – Mar 2020

Role: .Net Developer

Responsibilities:

- Designed responsive web pages using **HTML5**, **CSS3**, **JavaScript**, **React.js**, and **Bootstrap**, enhancing user experience with dynamic styling via **SASS** and **LESS**.
- Collaborated in an **Agile (Scrum)** environment, delivering iterative updates and maintaining regular communication with project stakeholders.
- Developed front-end components using **React.js** and managed state with **Redux**, implementing features such as role-based access control (RBAC) using **ASP.NET Identity**.
- Integrated secure web applications with **ASP.NET** security features and utilized **JWT** for securing HTTP requests.
- Developed and maintained **VB.NET** applications following **MVC** and **MVVM** design patterns for better code organization and separation of concerns.
- Created and consumed **RESTful web services** and **WCF services** for effective communication between client and server applications.

- Engaged in the complete **SDLC**, conducting system design and testing, while utilizing **Git** for version control and **Jenkins** for CI/CD.
- Researched and implemented cloud solutions on **AWS**, ensuring optimal performance and scalability.

Environment: HTML5, CSS3, JavaScript, React.js, Redux, Bootstrap, SASS, LESS, ASP.NET, VB.NET, WCF, AWS, Git, Jenkins, Agile.

Client: Sonata Software – India

Nov 2013 – Sep 2016

Role: Software Developer

Responsibilities:

- Developed web applications using **ASP.NET**, **C#**, and **jQuery**, implementing custom controls and business logic for enhanced functionality.
- Designed GUIs with **AJAX**, **HTML**, **CSS**, and **JavaScript**, improving user interaction and experience.
- Created and consumed **WCF services** to facilitate Service-Oriented Architecture (SOA) and enabled communication across diverse applications.
- Built RESTful APIs using **Node.js** for backend integration and developed dashboards for an intranet portal using **Angular**.
- Executed data handling using **Entity Framework** for CRUD operations and managed database objects with **SQL Server**.
- Practiced secure coding in **VB.NET**, implementing input validation and data encryption for improved security.
- Led requirements gathering and design review sessions to align solutions with stakeholder expectations while working in an **Agile** environment.
- Used **GIT** for version control, tracking changes and managing builds effectively.

Environment: .NET Framework 4.5, C#, ASP.NET, MVC, AJAX, HTML, CSS3, LINQ, web APIs, JavaScript, AngularJS, SQL Server 2012, Git, Agile
