PROFESSIONAL SUMMARY

A seasoned Quality Assurance Engineer/Analyst with over 9 years of expertise driving high quality standards and successful delivery across the full SDLC within dynamic Agile/SCRUM environments. Possessing deep skills in technical and functional testing across mobile (iOS/Android) and multi-browser web applications, utilizing manual, exploratory, and test automation methods. Core competencies encompass API validation, database integrity checks (SQL), performance/load testing, and comprehensive regression, system, and integration testing. Proven success in cross-functional collaboration, early issue identification, and providing end-to-end release management. Having recently concluded my previous role due to a departmental reorganization, I am now actively seeking a new QA role where I can immediately leverage this experience to drive the strategic development and execution of the quality roadmap, standardize technical QA processes, and build highly reliable products that directly contribute to user confidence and business growth.

KEY SKILLS

Agile/Scrum & Waterfall: Expertise in Quality Assurance processes across Agile (Scrum), Waterfall, and hybrid development environments.

Continuous Integration/Delivery (CI/CD): Experience supporting Continuous Deployment and Delivery pipelines and managing software releases.

SDLC Management: Proficient in Requirements Development, Analysis, and Management; Product Backlog Assessment; and Test-Process Delivery & Optimization.

Functional & System Testing: Proficient in Manual data-driven, functionality, integration, and end-to-end Regression testing (Front and Backend).

API & Data Validation: Strong skills in API Testing & Validation and Backend Data Validation (SQL) for data integrity.

Specialized Testing: Experience with Performance and Load Testing, Globalization and Localization Testing, and identifying risks via Security Testing.

Test Artifacts: Skilled in developing, optimizing, and maintaining comprehensive Test Cases and Test Data.

Defect Lifecycle Management: Expert in Defect Documentation, Tracking, and Resolution using industry-standard tools.

Root Cause Analysis (RCA): Proven ability in Issue/Defect Identification, Validation, Triage, and performing Root Cause Analysis (RCA).

Customer Advocacy: Experience with Customer Issue Reproduction and investigation/resolution support.

Standards & Compliance: Ensuring UI/UX standards compliance and performing documentation inspection.

Technical Troubleshooting: Investigation and resolution support for complex software issues.

Analytical Review: Requirements analysis and optimization, alongside identification of potential risks and weaknesses.

Team Development: Skills in Mentoring & Team Collaboration to uplift QA standards across teams.

TECHNOLOGY & TOOLS

Operating Systems & Browsers: Windows, Mac OS, iOS, Android, Linux, Chrome, Firefox, Safari, Edge, VMware

Project Management Tools: Atlassian JIRA, Microsoft Project, ServiceNow

Cloud Platforms: Microsoft Azure, AWS

Testing Tools & Test Automation: JIRA(Xray, Zephyr, TestRail), Elementool, TFS (Teams Foundation Server), Version One, Postman, JMeter, SQL Server Management Studio(SSMS), Visual Studio (Community, Code), Katalon, Mabl, QTP/UFT, Playwright

Programming Languages: CSS, XML, HTML5, HTTP, SQL, JSON, C#, JavaScript, VBScript, Python

Collaboration Tools: Google Workspace, Zoom, Skype for Business, Microsoft Teams, Slack

PROFESSIONAL EXPERIENCE

CSC Global

QA Engineer

April, 2021- March, 2025

- Position impacted by departmental reorganization.
- **Drove Comprehensive Application Stability and Readiness**
 - Executed a full testing suite including smoke, functional, regression, staging, and production testing, alongside specialized API testing, performance, load testing, and SQL queries to validate data integrity and application scalability
- **Streamlined Critical Production and Staging Releases**
 - Managed multi-project deployments utilizing ServiceNow, ensuring strict adherence to protocols and achieving minimal end-user downtime across all rollouts
- **Accelerated Defect Resolution and Test Coverage**
 - Partnered with Development and Support teams to manage the full defect lifecycle, from creation to resolution, using tracking tools like TFS and VersionOne.
- **Championed Project Alignment within the Development Pipeline**
 - Ensured timely delivery and roadmap synchronization through active participation in all Agile ceremonies (Sprint Planning, Story Refinement, and Daily SCRUMs)
- **Enhanced Team Efficiency and Knowledge Transfer**
 - Mentored and trained new QA team members on complex product knowledge, testing methodologies, and essential release management processes

Mirata Software LLC

QA Analyst

January, 2020 - November, 2023

- **Established the Foundational QA Framework as the First Dedicated Quality Assurance Analyst**
 - Defined initial testing standards, established comprehensive test strategies, and implemented core tools (**Xray, Jira**) to embed quality assurance early in the development lifecycle
- **Drove Strategic Test Planning and Coverage**
 - Developed and executed comprehensive test strategies aligned with Agile methodologies to support iterative development, resulting in efficient test planning and high product quality
- **Enhanced Requirements Traceability and Defect Management**
 - Designed and executed test cases using Xray and integrated it seamlessly with Jira to establish end-to-end defect tracking and clear requirements traceability
- **Ensured Flawless Cross-Platform and Cross-Browser Compatibility**
 - Performed detailed manual testing on mobile platforms (Android & iOS) and conducted extensive cross-browser testing across leading browsers (Chrome, Firefox, Safari, Edge) to guarantee functionality and usability
- **Maintained Application Stability Across All Releases**
 - Executed a full range of testing, including smoke, functional, and regression testing, for both web and mobile applications to ensure operational stability throughout the release lifecycle
- **Drove Automation Innovation and Tool Evaluation**
 - Assessed and compared the feasibility and integration potential of various codeless automation tools (Mabl, Katalon) for deployment within the Agile test pipelines

NCQA

QA Automation Consultant

February, 2017- January, 2020

- **Drove a 30% Reduction in Manual Testing Effort through Strategic Automation Integration**
 - Facilitated seamless automation by embedding data-test-ids within developers' HTML frameworks, significantly improving test reliability and reducing manual effort by 30%
- **Engineered and Maintained Scalable, Data-Driven Automation Test Suites**
 - Developed and maintained robust automation test scripts using Selenium WebDriver with C#, supporting efficient test data collection and comprehensive suite management
- **Ensured Application Stability and Reliability Across Complex Virtual Environments**
 - Conducted extensive regression testing across multiple Virtual Machines (VMs) and performed detailed GUI, functional, and system testing to validate performance and reliability across all application modules
- **Optimized Quality Processes by Aligning Automation Design with Business Requirements**

- Led automation test planning and design, creating comprehensive test designs, test scenarios, and documentation based on functional use cases to ensure direct alignment with core business needs
- **Accelerated Defect Resolution using Centralized Tracking Systems**
 - Executed automated and manual tests, efficiently reporting and tracking all defects to resolution using TFS for streamlined issue management and reporting

SureTint Technologies

QA Analyst

June, 2016 - January, 2017

- **Aligned QA Strategy and Scope with Core Business and Technical Requirements**
 - Analyzed project documentation to determine precise testing scope, created detailed use cases and test cases, and actively engaged in daily QA team meetings to align efforts with defined business goals
- **Established Data Integrity and Compliance through Validation and Verification (V&V)**
 - Executed dedicated Validation and Verification (V&V) testing activities on data loads and feeds, ensuring strict data accuracy and system compliance across the application
- **Optimized Defect Management and Prioritization using Root Cause and Risk-Based Analysis**
 - Conducted in-depth root cause analysis and risk-based analysis to prioritize identified issues and streamline the defect management lifecycle, focusing efforts where risk was highest
- **Validated Complex System Interoperability through Hardware-Software Integration**
 - Performed critical integration testing for peripheral hardware, validating seamless software-to-firmware communication and overall system functionality in complex physical environments
- **Minimized Regression Impact via Targeted and Structured Testing**
 - Identified stable application components and focused testing on newly introduced features; performed data and functionality regression on stable components to prevent unintended negative impacts
- **Ensured End-to-End Compatibility Across Diverse System Configurations**
 - Executed extensive release compatibility testing and subsequent regression testing following code modifications to guarantee consistent application functionality across various environments and configurations

EDUCATION AND CERTIFICATIONS

Kazakh Ablai Khan University of International Relations and World Languages - International Affairs
Graduated 2012
Almaty, Kazakhstan

Forte Knowledge Technical School - Quality Assurance Software Testing
Certified 2016
