PROFESSIONAL SUMMARY

Senior Frontend Engineer with 9+ years of experience designing scalable, performant, and accessible web applications. Specialized in React, TypeScript, and design systems with proven leadership in frontend architecture, reusable component libraries, CI/CD enablement, and mentoring engineering teams. Adept at shipping complex cross-functional features end-to-end, optimizing client experiences, and driving technical excellence. Deep understanding of frontend tradeoffs across SSR/SSG/CSR, caching, testing, and performance. Passionate about delivering customer value through thoughtful UI design, system simplicity, and long-term scalability.

SKILLS

- **Languages & Frameworks:** JavaScript (ES6+), TypeScript, HTML5, CSS3, React, Next.js, Vue, Angular, Node.js
- **UI Systems:** Material UI, Chakra UI, Tailwind, Ant Design
- **Architecture & Tooling:** Design systems, SSR, SSG, CSR, performance budgets, Webpack, Vite, micro frontends
- **State Management:** Redux, Recoil, Zustand, Context API
- **API & Data:** RESTful APIs, GraphQL, Axios, React Query
- **Testing:** Jest, React Testing Library, Cypress, Enzyme, unit/integration testing, Lighthouse
- **DevOps & CI/CD:** Git, GitHub Actions, Jenkins, Docker, Kubernetes, Netlify, Vercel, CircleCI
- **Collaboration:** Agile, Jira, Confluence, Figma, product partnering, mentoring
- **Best Practices:** Accessibility (WCAG 2.1), security, SEO, responsive design, caching, performance optimization

WORK EXPERIENCE

Scale AI | Senior Frontend Engineer

Mar 2019 - Feb 2025

Led the architecture and development of core internal platforms used across Scale AI, with end-to-end ownership from technical design to deployment. Focused on performance, scalability, accessibility, and developer velocity across large-scale systems.

- Designed and implemented scalable frontend architecture using React, TypeScript, and modular state management (Redux, Recoil), enabling extensible product lines
- Built reusable component libraries integrated with Material UI, adhering to accessibility standards (WCAG 2.1) and supporting responsive design
- Partnered with product and design to shape features that aligned with business goals and technical feasibility
- Integrated RESTful and GraphQL APIs with optimized caching, pagination, and error handling strategies via Axios and React Query
- Improved frontend performance through bundle analysis, code splitting, lazy loading, and rendering optimizations across massive datasets
- Owned CI/CD automation using GitHub Actions and CircleCI, including unit/integration test coverage (Jest, React Testing Library, Cypress)
- Drove architectural discussions and mentored junior and mid-level engineers through reviews, pairing, and internal documentation
- Contributed to DevOps by implementing Docker-based local environments, shared staging pipelines, and static analysis tooling
- Led accessibility audits and Lighthouse benchmarking to improve end-user experience and cross-browser consistency
- Operated in Agile delivery cycles, participating in sprint planning, retrospectives, and Jira/Confluence-driven documentation

Vollume Control | Full-stack Engineer (Contract)

Feb 2016 - Feb 2019

Contributed across the stack in a lean team environment, helping build and grow a cross-platform music platform. Led frontend UI/UX initiatives and worked closely with designers and product managers.

- Developed responsive web, desktop (Electron), and mobile (React Native) apps with React and TypeScript, enhancing user experience across devices
- Migrated from Ant Design to Material UI to improve performance, accessibility, and design consistency
- Delivered end-to-end features from planning to release, ensuring seamless integration and managed update automation across platforms for consistent user experience
- Created CI/CD workflows with Git and CircleCI, improving release stability and velocity, leading to faster deployment cycles
- Integrated REST APIs and abstracted frontend services for maintainability and testing, resulting in more efficient development processes
- Tuned frontend performance, implemented accessibility best practices, and improved SEO for public pages
- Mentored junior engineers and created documentation to scale team knowledge, reducing onboarding time and enhancing team productivity

Viva Data | Frontend Developer (Contract)

Feb 2015 - Jan 2016

Early-career role focused on improving frontend stability and deployment workflows for a data visualization platform.

- Optimized performance of the company's Vue.js rendering engine by profiling and reducing runtime bottlenecks
- Implemented CI/CD pipelines with CircleCI and GitHub, streamlining release processes and reducing manual deployment errors
- Built auto-update infrastructure for Electron-based desktop apps, improving user experience and update reliability
- Contributed to testing and cross-platform compatibility improvements with a focus on responsive and accessible UI patterns
- Collaborated with senior developers to document frontend architecture and improve onboarding process

EDUCATION

Singapore University of Technology and Design

Mar 2010 - May 2014

Bachelor of Science, Computer Science
