DATA ANALYST | DATA INTEGRITY & SYSTEMS OPTIMIZATION | OPERATIONAL INTELLIGENCE

Results-driven analyst with a background in IT systems monitoring, inventory data accuracy, and logistics operations. Leverages hands-on experience in data entry, troubleshooting, and workflow improvement to extract actionable insights, streamline processes, and support business decision-making. Skilled at identifying patterns, maintaining clean datasets, and collaborating with cross-functional teams to solve complex operational challenges. Actively building cybersecurity knowledge to enhance data protection and system efficiency in dynamic environments.

CORE COMPETENCIES

Data Entry & Record Accuracy | Inventory & Operational Analytics | Data Integrity & Quality Control

System Monitoring & Issue Resolution | Microsoft Excel & Office Suite | Problem Solving & Critical Thinking

Process Improvement | Warehouse & Supply Chain Data | Cybersecurity Fundamentals (In Progress)

Stakeholder Collaboration | Technical Troubleshooting | ERP & Reporting Tools (TBD/Trainable)

KEY CONTRIBUTIONS & IMPACT

- Data Processing & Analysis – Maintained high data accuracy while processing inventory logs and shipment records, ensuring timely updates for performance reporting and decision-making.
- Systems Monitoring – Supported IT operations by monitoring system performance, identifying issues, and minimizing downtime through timely hardware/software troubleshooting.
- Inventory Management – Tracked, verified, and reconciled incoming/outgoing inventory, reducing discrepancies and improving warehouse data accuracy.
- Cross-Functional Collaboration – Partnered with warehouse teams, supervisors, and IT personnel to support workflow optimization and accurate data documentation.
- Continuous Learning – Actively pursuing training in cybersecurity and data tools to enhance technical knowledge and apply analytical skills in broader operational contexts.

PROFESSIONAL EXPERIENCE

Tech Systems Inc. | Fort Polk, LA

01/2023 – Present

Computer Operator

Provide IT systems support and data record maintenance for logistics operations, ensuring accurate tracking of inventory and seamless coordination between departments. Work closely with IT and operations teams to monitor system performance and maintain data integrity.

- Improved data accuracy by 30% through consistent validation of shipping and receiving logs using Excel-based reports.
- Reduced system downtime by troubleshooting and resolving hardware/software issues, resulting in improved workflow continuity.
- Partnered with IT to implement timely software updates and data security protocols across internal systems.
- Supported audit readiness by maintaining organized records aligned with company data compliance standards.

Warehouse Specialist

Oversaw daily inventory operations, shipment coordination, and inventory tracking to ensure fulfillment efficiency and data accuracy within warehouse systems.

- Processed and verified 100+ incoming and outgoing orders weekly, reducing inventory discrepancies by 25%.
- Reduced material loss by implementing rotation protocols and improving item tracking across 3 storage zones.
- Maintained OSHA-compliant operations while operating forklifts, minimizing incidents and enhancing workplace safety.
- Facilitated warehouse transfers and shipment prioritization, improving outbound logistics speed by 15%.
