

Professional Summary

I am Experienced Full Stack Developer and Jira Administrator with a strong background in Development, AWS, and DevOps tools for over 8 year. Adept at managing Jira, Confluence, Bitbucket, and optimizing cloud infrastructure to reduce costs and improve system efficiency. Expertise in CI/CD automation, AWS cloud architecture, Git, Bitbucket, and ITSM solutions. Successfully led large-scale Jira migrations, workflow optimizations, and cloud integrations, resulting in significant cost savings and process improvements. Proven ability to collaborate across teams, enhance operational performance, and drive automation for enterprise-scale applications.

Key Functions & Skills

Jira Administration & Atlassian Suite

- Configuration, administration, and optimization of Jira, Confluence, and Bitbucket
- Migrating and consolidating Jira cloud instances with minimal downtime
- Implementing Jira automations, ScriptRunner, and API-based automation
- Managing Jira Data Center, ITSM projects,
- Integrations with Salesforce (Copado) and Aha with Jira by accessing Jira API and configuring Webhooks on Jira
- Designing custom workflows, permission schemes, dashboards, and reporting solutions

AWS & Cloud Infrastructure

- AWS Services: EC2, S3, RDS, CloudFormation, Route 53, IAM, CloudWatch
- Infrastructure as Code: Terraform, CloudFormation
- Networking & Security: Direct Connect, VPC, Load Balancers
- Cost optimization and cloud migration strategies

DevOps, CI/CD & Version Control

- Jenkins Administration & Pipeline Automation
- Git & Bitbucket Administration – Managing repositories, user permissions, and integrations
- Migrating and maintaining repositories from SVN to GitHub/Bitbucket
- Configuring Bitbucket pipelines for automated deployments
- Integrating Jira with Git (Bitbucket, Azure Git) for tracking commits and branches
- Implementing branching strategies, merge policies, and code reviews

IT Service Management (ITSM) & Automation

- Configuring Jira ITSM for ticket management via forms and email
- Automating ITSM ticket creation from DB error logs using Jira APIs
- Maintaining time tracking, Xray test management, and Jira work logs

Software Installation & Deployment

- Creating and maintaining Windows & Mac installers using InstallShield and InstallAnywhere
- Automating Akamai server uploads for optimized content distribution

Certifications

- Atlassian Certified in Managing Jira Projects for Cloud (ACP-620)
- AWS Certified Cloud Practitioner
- AWS Certified Solutions Architect – Associate
- (ISC)² Certified in Cybersecurity (CC)

Key Skills

- Jira Software, Jira Service Management (JSM)
- Jira Cloud & Jira Data Center Administration
- Confluence & Bitbucket Administration
- ScriptRunner & Jira API Automation
- Custom Workflows, Permission Schemes, and Dashboard Management

- Migrating & Consolidating Jira Instances
- Integrating Jira with Bitbucket, Azure Git, and Salesforce (Copado)
- Java, Spring Boot, Python
- REST API Development & Integration
- SQL, SQL Server, AWS RDS
- Shell Scripting & Python Scripting
- Jenkins Pipeline Automation
- Git & Bitbucket Administration (Repo Management, Branching, Merging)
- SVN to GitHub/Bitbucket Migration
- Bitbucket Pipelines & Git Integrations
- Automated Build & Deployment
- AWS Services (EC2, S3, RDS, Route 53, IAM, CloudWatch)
- Infrastructure as Code (Terraform, CloudFormation)
- AWS Direct Connect & VPC Configuration
- Cost Optimization & Environment Consolidation
- Jira ITSM Ticketing & Automation
- Xray Test Management & Cucumber Integration
- Automating Ticket Creation from DB Error Logs
- Jira Work Log & Time Tracking Management
- Windows & Mac Installer Development (InstallShield, InstallAnywhere)
- Automated Software Deployment & Versioning
- AWS CloudWatch, Nagios Monitoring
- IAM Role & Policy Management
- Cybersecurity Best Practices

PROFESSIONAL EXPERIENCE

WWEX Group

Jira Administrator

Dallas, TX

June 2023- Present

- Responsible for configuration, administration, and maintenance of Jira software, Confluence and Bitbucket for the organization which involves, user management, workflow design, issue screen Layout, permission schemes, global automations, Optimizing billing and other global permissions .
- Migrated and merged two cloud Jira sites (after) with minimal downtime on both the sites and saved about 65,000 USD per annum in billing for the organization.
- Used script runner to implement remaining points calculations which reduced global Jira automation rule runs by about 60%.
- Migrated company confluence spaces to new site using import and export features.
- Used Jira APIs to migrate filters and dashboards ensuring filters are migrated with no human error.
- Wrote python scripts to use Jira API to automate data copy after migration.
- Maintained time tracking on Jira using time tracking plugin and Jira work log features.
- Configured Jira data center and used it to migrate Jira filters, dashboards and service management project data, x-ray test data that do not migrate using Jira cloud to cloud migration tool.
- Migrated and administered ITSM project and configured it to create ITSM tickets from both forms and emails.
- Worked on using Copado to integrate Jira with Salesforce
- Integrated Aha with Jira and JPD to establish bidirectional sync Initiatives and Ideas from Aha to JPD.
- Created and managed JSP projects for leaders to work on Ideas which might turn into Epics in later iteration. Migrated ideas from Aha to JPD to save Aha license.
- Certified by Atlassian in Managing Jira Projects for Cloud (**ACP-620**).

Amensys Inc

Dallas, TX

Jira Administrator

January 2023 – May 2023

- Designed and optimized workflows for efficient task management.
- Implemented Jira automations to auto populate some fields based on issue type and transitions.
- Integrate Jira with bitbucket and azure git to populate commit and branch details with issue key in description in development panel.
- Created many custom dashboards as per requirements from PMs to understand team velocity.
- Used Jira sand box instead of test site which resulted in significant cost savings to the company.
- Configured projects to use Xray and cucumber test types.
- Wrote automation scripts that created ITSM tickets on Jira from DB error logs on **AWS**.

Thermo Fisher Scientific

Bangalore, India

Engineer II, Software

July 2019– December 2021

- Configured Jira permission scheme, custom fields, workflows, and automation based on team requirement.
- Updated existing automations and used scriptRunner to significantly bring down Jira automation usage by 20%.
- Created Jira filters using JQL and extended JQL search that can be used by company leadership to visualize sprint wise and team wise reports.
- Created many company managed and team managed projects to cater team requirements and implemented automations to meet teams requirements.
- Created automations to update custom fields like remaining story points based on actual story points and planned story points on any issue.
- Installed and managed Jira plugins to enhance functionality.
- Used Jira User profiles to fetch used data from Azure AD to Jira custom fields based on assignee.
- Implemented a dedicated private network from on premise to the AWS VPC using Direct Connect.
- Worked intensively on Consolidating and eliminating Environments as part of the cost reduction effort, which reduced considerable services cost (18000 dollars per annum) in AWS.
- Deployed infrastructure on AWS utilizing as EC2 (Virtual Servers in the Cloud), RDS (Managed Relational Database Service), VPC and Managed Network and Security, Route 53, Direct Connect, IAM, CloudFormation, AWS OpsWorks (Automate operations), AWS S3, Glacier (Storage in the cloud) and CloudWatch Monitoring Management.
- Design Develop and document architectural best practices for building systems on Amazon Web Services (AWS).
- Implemented Elastic Load Balancers (ELB's) and Auto Scaling groups in AWS on Production EC2 Instances to build Fault-Tolerant and Highly Available applications.
- Implemented CloudFormation Templates to provision and auto deploy EC2 Instances and Integrated with CodeDeploy Scripts to deploy the HRMS Web applications.
- Created AMI's to implement automatic deployments of application components and bootstrapping AWS EC2 Instances by passing User Data to download files from S3.
- Implemented AMI's for development and testing teams to launch EC2 Instances in VDI2 Environment.
- Responsible for ensuring Continuous Delivery/Continuous Integration across all environments from UAT/TEST to Pre-Production and Production using Jenkins.
- Experience is setting up monitoring of operational and performance metrics of our AWS resources and web applications using CloudWatch and Nagios.
- Automate the provisioning of test and production infrastructure in AWS using tools like Terraform and Chef
- Experience in using CloudFormation Templates to provision and auto deploy EC2 Instances and Integrated with AWS CodeDeploy Recipes to deploy the HRMS Web applications.
- Setting up IAM Users/Roles/Groups/Policies and automated DB &App backups to S3 using AWS CLI.
- Developed Shell scripts in automating administrative and maintenance tasks.
- Responsible for Microsoft SQL Server database systems (hosted and licensed clients) through the entire lifecycle, conception to production, troubleshooting and problem resolution for internal business partners.

Thermo Fisher Scientific

Bangalore, India

Engineer I Software

August 2016 - July 2019

- Maintained Atlassian Bitbucket and Jenkins instances for all teams across the organization, that included spinning an EC2 instance on AWS, configuring jobs and maintenance of the instance which facilitated globally about 80 teams in maintaining their instances.
- Manage download server contents by automating akamai server uploads and brought down response time to 1 day.
- Create Windows and MAC installers for various teams in the organization and maintenance of the installers which includes upgrade patch release and adding additional features using InstallShield and Install Anywhere (by Flexera).
- Responsible for management of all repositories and migrating them from SVN to GitHub and migration of over 250 repositories in about a couple of months.

EDUCATION**The University of Texas at Dallas, Dallas**

May 2023

*Master of Science, INFORMATION TECHNOLOGY AND MANAGEMENT (GPA :3.7)***National Institute of Technology, Warangal**

May 2016

*Bachelor of Technology***VISA**

I am currently on **H1B** visa and eligible to work in USA till October 2026. Further H1b can be extended for another three years based on employment.
