

Brian Pyatt

SENIOR FULL STACK ENGINEER | AI, LLM, JAVASCRIPT

Email: pyatt4606@gmail.com Phone: (703) 400-3854 Location: Leesburg, VA 20176, USA

LinkedIn: www.linkedin.com/in/brianpyatt

PROFESSIONAL SUMMARY

Experienced developer with expertise in **AI** and **LLM** orchestration using **JavaScript**, **TypeScript**, and **Python** across cloud platforms like **AWS** and **Azure**. Proven track record in building scalable **microservices** and **REST APIs** with a focus on **CI/CD** and performance optimization.

TECHNICAL SKILLS

JavaScript • Python • Java • TypeScript • Redis • AWS • GCP • Azure • CI/CD • DevOps • AI • LLM • RAG • LangChain • GraphQL • Microservices

WORK EXPERIENCE

Co-Founder & Technical Lead

Dec 2018 – Present

SpotCircuit

Ashburn, VA

- Sole decision-maker in product lifecycle from architecture to **CI/CD** delivery on **Azure**.
- Deployed **LLM** orchestrations with **AI** dashboards for real-time monitoring.
- Launched Textpro.ai with **OAuth**-secured **REST APIs** ensuring data isolation.
- Engineered **RAG** pipelines on **Node.js/TypeScript** with JD-specific retrieval optimizations.
- Led cross-functional teams in maintaining continuous **DevOps** pipelines aligned with business needs.
- Developed evaluation rubrics to assess **AI** task-completion, enhancing service reliability.
- Implemented **HIPAA** adherence in FixClinic client solutions with **Python**-based models.
- Optimized **TypeScript** workflows for data isolation in **Cloud** environments.

AI Architect & Senior Software Engineer

Jan 2020 – Dec 2024

StarCity Games

Roanoke, VA

- Managed full-stack **TypeScript/Node.js** applications supporting live features.
- Integrated **Agentic AI** with personalization layers and robust evaluation protocols.
- Developed **AI** monitoring solutions improving recovery KPIs by 60% with **AWS** alerts.
- Collaborated on **DevOps** processes for distributed log aggregation and tracing.
- Explored architectural risks and roadmap articulations, leading to optimal budget allocations.

Co-Founder & Engineering Lead

2009 – 2018

BnB Enterprise

Washington D.C. Metro

- Scaled \$15M ARR SaaS platform with **microservices** architecture using **JavaScript**.
- Transformed monolithic systems to **Node.js/Express microservices**, enhancing release cycles.
- Created real-time BI frameworks on **GCP**, empowering data-driven operations.
- Led cross-functional stakeholder engagements for coherent product strategic decisions.

Senior Web Application Manager & Developer

2006 – 2009

Dynology Corporation

Washington D.C. Metro

- Developed PHI-sensitive **ASP.NET** applications with comprehensive security measures.
- Designed secure web architectures complying with **HIPAA** standards.
- Implemented **SharePoint** deployments enhancing team collaborations.

Data Analyst & Web Developer

1999 – 2006

Verizon Business

Washington D.C. Metro

- Engineered scalable **ASP.NET** solutions, reducing process time by 60%.
- Developed data validation protocols improving enterprise decision-making processes.

EDUCATION

Virginia Tech - Pamplin College of Business

Blacksburg, VA

Bachelor of Science - Computer/IT Administration & Management

May 1998

PROJECTS

Textpro.ai - AI Universal Concierge Platform

- Single-owner product build: chat-based agent completing real-world tasks via multi-API orchestration including Stripe, Google, Duffel, and Ticket Evolution
- Implemented structured booking workflows, PHI-safe user session design, and full TypeScript / Node.js / Express platform architecture

Agentic AI Evaluation Framework - SpotCircuit

- Designed meta-auditing agent infrastructure to evaluate agentic workflow logic, detect failure modes, apply rollback checkpoints, and generate observability reports
- Enabled confident LLM model upgrades without introducing production risk

Rebar + rebar-mcp - Proprietary Agentic AI Framework & MCP Server

- Architected and shipped Rebar (github.com/spotcircuit/rebar), a structural memory system for AI coding agents with 23 slash commands and persistent project knowledge compounding
- Published [@spotcircuit/rebar-mcp](https://www.npmjs.com/package/@spotcircuit/rebar-mcp) to npm, exposing 30+ MCP tools across Setup, Learn, Work, Know, and Admin categories for Cursor, Windsurf, VS Code Copilot, Claude Desktop, and Claude Code
- Implemented a self-learn loop that validates observations, promotes confirmed learnings to structured YAML knowledge stores, and discards stale facts across active projects without external databases

PickGeeks - AI Sports Intelligence Platform

- Built AI-powered analytics engine integrating TeamRankings ATS, EPA metrics, and live odds from 20+ sportsbooks
- Demonstrated real-time data ingestion, LLM evaluation pipelines, and production monitoring at scale
